

FOREWORD

The Faculty of Chemical Technology of the Slovak University of Technology is one of the six faculties, which in 2000 celebrated the 60th anniversary of its establishment. The history of the Faculty dates back to 1940/41 when the Branch of Chemical Engineering started with education. The Higher Education Act from 1950 changed this branch to the individual Faculty of Chemistry of the Slovak College of Technology in Bratislava.

The Slovak higher education has its rich history. Our Faculty follows in the footsteps of its famous predecessor in the education of technical chemistry, i.e., the famous Mining Academy in Banská Štiavnica, which ceased to exist in 1919. The establishment of the Dr. M. R. Štefánik College of Technology in 1937 and subsequently, that of the Slovak College of Technology in 1939 succeeded in keeping the high standard of technical education in Slovakia.

Within the time of its existence, the Faculty has educated more than 16,000 graduates (more than 3,000 graduates in food engineering). The Faculty has trained more than 1,200 graduates in postgraduate doctorate courses granting the title PhD in chemical and technical sciences. Thus, the Faculty has helped considerably to increase scientific knowledge in industry, education system, scientific and research institutes, and administrative services.

The Faculty occupies a very specific position within the Slovak Republic and relates to the whole spectrum of chemical, food, pharmaceutical and consumer industries, and ecology. At present, some 2,200 students study at the Faculty and they are trained by a qualified pedagogical and research staff. Out of the total number of 273 teachers, there are 28 full professors, 106 associate professors, and 139 assistant professors. Out of 85 research workers, 2 hold the title DSc., 45 hold the title PhD. Both the teaching process and research activities are centred within 24 Departments and Central Laboratories.

The Faculty currently offers study in BSc. courses, MSc. courses, and PhD study. The undergraduate form of study is organized at two levels: Bachelor-of-Science and Master-of-Science programmes. The first level BSc. course for all students lasts three years, and is run in two branches: Chemical Technology and Food Biochemistry. This first level of the study ends by a state examination and a project granting the student the title Bachelor of Science (BSc). The nominal span of the study in the BSc. course is 3 years. The second level MSc. course is run in 9 majors with several possible specializations over two years. The MSc. course ends by a state examination and by defending a diploma thesis. The graduate obtains the title Master of Science (MSc.). In addition to the natural-science basis, students of all branches study basic engineering subjects, e.g. Chemical Engineering, Processes Control, Basics of Chemical and Food Processing Technology, as well as subjects on Economy, Law and Ecology.

The highest form of university education is currently the doctorate study, which in the past was run as a form of preparation for scientific work. In 1997 the Ministry of Education of the Slovak Republic approved the right of the Faculty to train and to administer examinations in PhD. Courses. The Faculty has conferred the title PhD in 15 branches of the doctoral study. (Chemical Physics, Inorganic Chemistry, Organic Chemistry, Analytical Chemistry, Physical Chemistry, Macromolecular Chemistry, Biochemistry, Microbiology, Inorganic Technology and Materials, Organic Technology and Technology of Fuels, Technology of Macromolecular Materials, Chemical Engineering and Control of Processes, Chemistry and Technology of Environment, Chemistry and Food Technology, Biotechnology). In 2000 the Faculty obtained the accreditation for the branch of Applied Informatics.

The Faculty has a widely oriented programme, leading to the development of basic scientific fields in chemistry, chemical technology and food processing. This wide scientific orientation of Departments at the Faculty allows goal-oriented training of undergraduates and thereby their quicker transition to industry. There are several scientific schools at the Faculty which are successful at winning grants from domestic and international sources and at organising scientific meetings. The Faculty generally maintains an important international position. In addition to basic research, the Faculty participates in widely applied research for practice. The cooperation with many factories and companies allows for a swift application of research results in practice. At the same time the Faculty obtains considerable financial support.

The Faculty participates in issuing the specialized scientific journals: Fibres and Textile, Plastics and Rubber, Journal of Radioanalytical and Nuclear Chemistry, Biology, Folia Microbiologica, Vinohrad/Víno (Vineyard/Wine).

The scope and quality of the scientific activity keep the Faculty at a level, which is comparable with other top research and university centres in the world. This can be proved by the above mentioned number of grants, staff invitations to participate in conferences abroad, wide cooperation with foreign universities and institutions, and memberships in international organizations.

Any further details about the activities of the Faculty of Chemical Technology of the Slovak University of Technology in Bratislava can be found in the Annual Report 2000.

February 2001

Prof. Vladimír Báleš, PhD, DSc
Dean

PRESIDIUM OF THE FACULTY

Dean: Prof. Vladimír Báleš, PhD, DSc

Vice-deans: Prof. Dušan Bakoš, PhD, DSc
 Assoc. Prof. Pavel Kovačk, PhD
 Assoc. Prof. Ján Šajbjidor, PhD, DSc
 Assoc. Prof. Zdenek Židek, PhD

SCIENTIFIC COUNCIL

Chairman: Prof. Vladimír Báleš, PhD, DSc

Assistant Professors :

Eva Benická, PhD, Tatiana Buzinkaiová, PhD, Andrea Hercegová, Elena Korgová, PhD, Jarmila Laštincová, Pavol Májek, PhD, Alena Manová, PhD, Pavol Tarapéík PhD, Mária Vaníèková, PhD

Reader :

RNDr. Magdaléna Valachovièová

Research Fellows::

Miriam Buèková, PhD, Ján Dzurov, Adriana Ferancová (from 1.10.2000), Katarína Hroboòová, PhD, Pavol Kubalec, PhD, Jana Sádecká, PhD, Ivan Skaèáni, PhD, Ivan Špánik, PhD, Peter Tomèík, PhD

PhD Students:

Branko Balla, Alica Ěaniová, Jana Ěungelová (from 1.10.2000), Peter Korytár, Petra Kotianová (from 1.10.2000), Peter Oswald

Technical staff :

Ladislav Bartalos, Danuša Bartalosová, Marta Benešová, Zuzana Cifrová, Ing. Jana Otrubová

II. TEACHING AND RESEARCH LABORATORIES

Laboratory of capillary gas chromatography

Laboratory of high performance liquid chromatography

Laboratory of electroanalytical methods

Laboratory of molecular spectrometry

Clean laboratory for trace analysis with atomic spectrometry (AAS, OES-ICP)

Laboratory of organic elemental analysis

Laboratory of organic synthesis

Laboratory of fluorescence analysis

Laboratory of capillary isotachophoresis

Laboratory of electrochemical pre-concentration for atomic spectroscopy

Laboratory of chemometry

Laboratory of bioanalytical chemistry

III. TEACHING

A. Undergraduate Study

4th sSemester

Analytical Chemistry I.	(2-2 h)	Labuda, Polonský, Vrábel
Laboratory Practice AC I.	(0-4 h)	Valachovièová

5th semester

Analytical Chemistry II.	(2-2 h)	Bustin, Ěakrt, Lehotay, Polonský
Laboratory Practice AC II.	(0-4 h)	Korgová
Testing and Quality Control	(1-1 h)	Ěakrt

6th semester

Semestral Project

7th semester

Atomic Spectrometry	(2-0 h)	Beinrohr
Anal.Chem.of Complex Inorg. Mixtures	(2-0 h)	Oktavec
Anal.Chem. of Complex Org. and Biological Mixtures	(2-0 h)	Brandšteterová
Lab.Practice I.	(0-10 h)	Matisová
Biosensors	(2-1 h)	Labuda
Computer evaluation of anal. measurement	(2-0 h)	Májek, Mocák

8th semester

Electrochemistry and Electro-analytical Chemistry	(2-1 h)	Bustin
Techniques of Mixtures Separation	(2-2 h)	Matisová, Valigura
Analytical Separation of Compounds	(2-1 h)	Krupéík

Lab.Practice II Trace Analysis and Microanalysis Methods	(0-6 h) (2-0 h)	Matisová Beinrohr, Čakrt
9th semester		
Bioanalytical Chemistry	(2-1 h)	Labuda, Mocák
Identification of Chemical Substances	(2-1 h)	Lehotay, Liptaj
Lab.Practice V.	(0-10 h)	Matisová
Automatisation of Analytical Chemistry	(2-0 h)	Rievař
Nuclear Analytical Chemistry	(2-0 h)	Tarapéřík
Environmental Analytical Chemistry	(2-0 h)	Benická, Buzinkaiová
10th semester		
Laboratory of Diploma Work Selected Subjects	(0-30 h)	

IV. CURRENT RESEARCH PROJECTS

A. Development and Application of Direct Injection Assays for HPLC Analysis of Some Drugs and Toxic Compounds in Biological Samples (Eva Brandšteterová)

The aim of the project is the development and application of new automated assays with the possibility of direct injection of biological samples into the HPLC system. New sorbents , especially with restricted access for macromolecules (Restricted Access Materials- RAM) and high retention and preconcentration ability for analyzed compounds are tested for the preseparation step.

RAM precolumns with the recommended material have been integrated directly into the HPLC system what improves validation parameter values and minimizes the personal contact with biofluids. Direct sample injection of biological samples (hemolyzed blood, plasma, serum, urine, homogenates of tissue, supernatants of cell cultures, extracts of plants and milk) with the application of RAM materials has not been widely applied till now and the study of optimal extraction and retention conditions, interactions of analytes and matrix biopolymers with the sorbent enable to integrate the RAM extraction precolumn into the HPLC equipment.

The results obtained during the project research works:

- Some new assays have been developed for the direct achiral and chiral HPLC analysis of chosen drugs and their metabolites with the applications of various new sorbents in preseparation columns integrated on-line into the HPLC system and results have been compared with techniques, commonly used in biological sample handling. Column-switching system was applied for the development of new procedures in drug monitoring in clinical material and the HPLC analysis of biological compounds in food and plant samples.
- RAM sorbents have been chosen with acceptable hydrophobic behaviour for the analyzed compounds and elution parameters have been determined with the aim to achieve the sufficient preconcentration of analytes in biological matrices.
- The results of HPLC and electromigration methods (CE) have been compared for chiral separation of some drugs and their metabolites in clinical samples and some new methods have also been developed for direct ITP analysis of the group of drugs in biological material and organic acids in food samples.

The study of interactions with the influence on selectivity of chiral drug separation has been realized, the possible steric influence , the effect of separated molecules caused by mobile and stationary phases have been studied and the separation mechanism for applied chromatographic system has been explained.

B. New Electroanalytical and Spectroscopic Systems for Ultra-trace and Speciation Analysis with Special Emphasis to Environmental and Clinical Problems. Optimization of analytical procedures (Dušan Bustin)

The aim of the project is the development of analytical methods for trace and ultratrace analysis of complex clinical and environmental samples. The results achieved during recent stage of research can be summarized as follows:

- Analytical methods for determination of Se and dithiocarbamates in environmental samples were developed and characterized metrologically. The methods apply Interdigitated Microelectrode Array in dual polarization mode.
- Metrological characterization and validation was accomplished for AAS determination of As and Se using electrochemical generation of corresponding hydrides.
- Analytical method for simultaneous determination of Zn, Cd, Pb and Cu using flow galvanostatic stripping coulometry was developed.
- A new method for determination of electroactive species using total electrolysis inside porous electrode was developed. The method was tested for determination of some metals (Fe, Cr) and non-metals (halogenides, oxygen, nitrates, organic species) in aquatic samples.
- A new method of determination of limit of detection was applied in different regions of trace analysis.
- Interfering signals in voltammetry were deconvoluted using their transformation by semidifferentiation.

C. Trace analysis of selected analytes in complex organic systems by combination of preconcentration techniques and capillary gas chromatography (Eva Matisová)

The project is oriented to the development of methods for the trace analysis of selected, particularly volatile and semivolatile compounds in complex organic systems - in environmental matrix (predominantly water) utilising preconcentration techniques in combination with capillary GC. A part of the project is devoted to the miniaturisation in analytical chemistry - to the development of microextraction methods for the sample preparation, large volume injection (small sample size necessary) in capillary GC. A part of the project is connected with the development of high speed GC and combination with preconcentration techniques for the analysis of semivolatiles polarity thermolabile compounds. High speed gas chromatography allows the shortening of the time of analysis have evaluated the present state of the theory of high speed capillary GC, fa. influencing the speed of analysis and instrumentation which could be utilized for

GC – conventional and ultra high speed GC utilising specially development Instrumentation. For the aims of trace analysis we have used high speed GC with own column injection. We have shown the necessity of the combination of conventional dimensions precolumn with the narrow bore analytical capillary column, which allows a sample introduction without the peaks broadening. The influence of experimental parameters, as column head pressure, injection volume, initiation temperature of the temperature programme and temperaturegradient on peaks focusing was searched.

D. CEEPUS Project PL-0110-00/01 (Ján Mocák)

The Project, planned for the schoolyear 2000/2001, concerns 5 cooperating Universities: (1) Faculty of Material Science and Ceramics, University of Mining and Metallurgy, Kraków, Poland, (2) Institute für Analytische Chemie, Karl-Franzens-Universität, Graz, Austria, (3) Faculty of Chemistry & Chemical Technology, University of Ljubljana, Slovenia, (4) Department of Analytical Chemistry, Slovak University of Technology, Bratislava, Slovak Republic, and Institute of Analytical Chemistry, Faculty of Chemical Technology, University of Pardubice, Czech Republic.

The collaboration is focused on education and research in analytical chemistry, especially at the postgraduate and graduate level, mainly in the following areas: development and improvement of contemporary analytical methods and procedures, monitoring the environmental pollution, application of the quality systems and accreditation requirements to the research and routine analytical laboratories. The following key activities have been planned for the Project:

- 1) Mobility of the PhD and Master degree students to improve their educational level and language skills.
- 2) Mobility of the teaching staff to increase their teaching performance.
- 3) Utilization of unique or rarely available instruments and experience of their operation by the cooperating partners - the students as well as academic staff.
- 4) Preparation of joint scientific outputs.

E. Development of new analytical methods in environment and pharmaceutical drugs in biological systems (Drahomír Oktavec)

1. The aim of this Project is:

- a) to develop methods for the determination of trace and ultra trace amounts of chosen toxic elements and compounds in the air, soils and waste products of industrial factories which would also allow to monitor their transition into the food chain of mammals,
- b) on the base of chromatographic methods to model conditions in biological materials and develop methods both for the determination of pharmaceutical drugs and their degradation products in biological systems as well as for the separation of enantiomers of pharmacologically active compounds,
- c) to study crystal and molecular structure of biologically active compounds by X-ray structure methods, which results are obliged as qualitative criteria for drugs.

2. In the frame of the project the very good results were achieved in the field of the study of some drugs by HPLC and structural analysis. Also, the som pollutants in environmental were studied. The students were included in the study and so the project had the very good education efficiency (diploma and projekt works). Some results of the study were used into education process in the field of practical student training. Besides of diplom and project works 7 lectures were presented on the international symposia and local conferences.

F. The development of modern method for teaching analytical chemistry supported by PC (Pavol Tarapčík)

This project is directed to overcame drawbacks of traditional teaching method by applying relatively individual work methods in front of PC in the field of analytical chemistry. Chemical equilibria as applied in analytical chemistry represents for students relatively complex problem both in chemical and mathematical description. The last one is often crucial in the classroom work but represents only the tool, not the content analytical chemistry. The principal aim of the project is: by minimising time consuming calculation in classroom open new possibilities to recognise chemical principles of analytical methods.

The main goals of this project are:

- to make simulating software for various analytical methods, mainly in the area of chemical equilibria in analytical chemistry,
- to make teaching procedures supported by simulating software, combining work methods in whole group by traditional method and in small groups (two-three students) with PC,
- to make templates for solving typical problems of analytical chemistry.

We have prepared new teaching software supports based on spreadsheet „EXCEL“. These products include:
software intended to assist teaching acid-base equilibria,
application software of chemical equilibria in analytical methods,
solved templates of typical analytical and equilibrium problems (on PC)

The textbook containing typical solutions of analytical problems was prepared as well.

V. COOPERATION

A. Cooperation in Slovakia

Department of Analytical Chemistry PrF UK Bratislava
 Faculty of Natural Sciences, Comenius University, Bratislava
 Faculty of Medicine, Comenius University, Bratislava
 Faculty of Pharmacy, Comenius University, Bratislava
 Food Research Institute, Bratislava
 Institute of Veterinary Hygiene and Ecology, Trnava
 National Institute of Oncology, Bratislava
 Slovak Academy of Sciences, Bratislava

B. International Cooperation

Department of Analytical Chemistry, Palacky University, Czech Republic

Department of Chemistry, Gilman Hall, Iowa State University, Ames, IA 50011-3111, USA

Chiral separation of optical active compounds by GC and SFC

Department of Organic Chemistry, Gent University, Gent, Belgium

Chiral separation of optical active compounds by GC and SFC

Department of Oncology, University of California, San Diego, U. S. A.

Department of Pharmacology, McGill University, Montreal, Canada

Faculty of Material Science and Ceramics, University of Mining and Metallurgy, Kraków, Poland

Electrochemical trace analysis

Advanced chemometric evaluation of analytical data

Institute of Analytical Chemistry, University of Leipzig, Germany

Electrochemical methods in atomic spectroscopy

Institute of Pharmaceutical Chemistry, University of Muenster, Germany

Institute of Pharmacy, University of Liege, Belgium

National Research Institute of Health Science, Tokyo, Japan

Organic Compounds in Aerosols

Technical University Vienna, Institute of Analytical Chemistry, Vienna, Austria

Utilization of Capillary GC in Combination with reconcentration Techniques for the Analysis

C. Membership in Domestic Organizations and Societies

Editorial Board of the Slovak scientific journal Laboratory Diagnosis

(J. Mocák)

Slovak Chemical Society at Academy of Science, Group of Analytical

(J. Krupěík)

Chemistry

Slovak Chemical Society, Chromatographic group

(E. Brandšteterová)

Slovak Chemical Society, Bratislava

(J. Labuda)

Slovak Research Technical Society

(E. Brandšteterová)

Slovak Society of Industrial Chemistry, Bratislava

(J. Labuda, M. Buèková, M. Vaníèková)

Slovak Spectroscopic Society Bratislava

(E. Beinrohr, A. Manová, J. Laštincová)

D. Membership in International Organisations and Societies

Advisory board member of the Fresenius Journal of Analytical Chemistry (E. Beinrohr)

Federation of European Chemical Societies- delegate of the Slovak

(J. Labuda)

Chemical Society in the Division of Analytical Chemistry

(E. Beinrohr)

Gessellschaft Deutscher Chemiker, Frankfurt

(E. Brandšteterová)

International Union Against Cancer, Switzerland

(E. Brandšteterová)

E. Tempus Programme :

F. International Scientific Programmes :

1. Biosensors for Direct Monitoring of Environmental Pollutants in the Field, INCO-COPERNICUS PROJECT ERBIC 15CT960804, Labuda J., project manager, University of Athens, January 1997 – January 2001

2. SLOVAK – US UNIVERSITIES CO-OPERATION Project Title: Mechanistic study of chiral recognition in HPLC and HRGC, J. Krupěík

The main objective of the project is to study some mechanistic aspects of chiral recognition in the direct separation of enantiomers by HPLC and HRGC. The project consists of following parts:

- 1 An influence of structure and polarity differences in substituents bonded to the asymmetric carbon atom in enantiomers, and selectivity of a chiral selector in HPLC and HRGC shall be studied in detail. Modified α -, β - and γ -cyclodextrins and macrocyclic antibiotics shall be used in gas and/or liquid chromatography as chiral selectors.
- 2 Thermodynamic data which characterize overall and enantioselective interactions of the enantiomers with chiral selectors shall be collected to gain more insight into the mechanistic aspects of enantioseparation on modified cyclodextrins.
- 3 A dependence of selectivity of a chiral column on the concentration of a chiral selector in polysiloxane solvent (a column coated with a mixed chiral phase and achiral phases) shall be compared with the overall selectivity of two columns coupled in series. In the column series, stationary phases in the individual chiral and achiral columns shall be identical with those used in column coated with the mixed chiral and polysiloxane phases.
- 4 Reasons responsible for the temperature dependence of retention order shall be studied by the GC separation of enantiomers on modified α -, β - and γ -cyclodextrins.
- 5 For mechanistic studies of enantiomers separated by chiral HPLC on macrocyclic antibiotics indirect detection techniques shall be introduced.
- 6 Selectivity of two chiral columns coupled in series for the direct separation of enantiomers by HRGC and RP HPLC shall be tuned by the change of mobile phase flow rate in individual columns. Elaborated optimum separation system shall be used for two dimensional separation of optically active compounds in natural samples.

Slovak Principal Investigator: Prof.Ján Krupěík, PhD DSc, Department of Analytical Chemistry, CHTF STU in Bratislava, Slovak Republic

Main American Investigator: Prof.Daniel W. Armstrong, Department of Chemistry, Gilman Hall, Iowa State University, Ames, IA 50011-3111, USA

3. NATO Project 621: Development of methods for determination biodegradation explosive pollutants. J. Lehota, project manager.

The main aim of the project is the development of new analy methods for ultratrace determination of some nitroaromatic in ground water and contaminated soil by a combination of a phase extraction of a phase extraction and HPLC using diode array and electrode detection. In this year the determination of some nitroaroma compounds in

contaminated soil samples was developed. The determination limit (1 ppb) was achieved. The extraction red also included in the study.

DEPARTMENT OF BIOCHEMICAL TECHNOLOGY

Head of the Department:
Prof. Fedor Malík, PhD, DSc

Telephone: +421-7-52967 085
Fax: +421-7-52967 085
E-mail: cheval@cht.stuba.sk

I. STAFF

Full Professors:
Jozef Augustín, PhD, DSc

Associate Professors:
Michal Rosenberg, PhD; Ján Šajbidor, DSc; Daniela Šmogrovièová, PhD; Ernest Šturdík, PhD;

Assistant Professors:
Katarína Dercová, PhD; Zoltán Dömöny, PhD; Helena Miková, PhD; Mária Šturdíková, PhD

Research Fellows:
Zuzana Antalová; Petra Bafrncová; Milan Èertík, PhD; ½udmila Krištofíková; Dušan Slugeò, PhD; Valter Vollek; Jana Zigová, PhD

PhD students:
Sathí Greta Bugan; Vladimír Hronský; Marián Navrátil; Katarína Mináriková; Jaroslava Pátková; Lucia Sláviková; Roman Tandlich; Ján Tkáè; Igor Voštiar.

Technical Staff:
Vlasta Sládková; Jaroslava Telgárska

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories:

Laboratory for the design of bioactive compounds
 Laboratory for biotechnological production of organic acids and fine chemicals
 Laboratory for study, isolation and transformation of microbial lipids
 Laboratory of secondary metabolites
 Laboratory of wine microbiology and oenology
 Laboratory of bioengineering
 Laboratory for solid-state fermentations
 Laboratory of yeast biotechnology
 Laboratory for microbial degradation of xenobiotics
 Laboratory of brewery technology

III. TEACHING

A. Undergraduate Study

3rd semester (autumn)

Biochemistry and Microbiology (2-1-0 h) Šmogrovièová, Èertík

5th semester (autumn)

Principles in Biotechnology (2-0-0 h)
 Xenobiochemistry (2-0-0 h) Šturdík
 Augustín, Dercová

6th semester (spring)

Biophysical Chemistry (2-2-0 h)
 Semestral Work (0-0-4 h) Valko, Zigová
 Miková, Navrátil, Šajbidor, Šmogrovièová,
 Šturdík, Šturdíková, Zigová

7th semester (autumn)

Enzymology and Enzyme Engineering (2-2-0 h)
 Biochemical and Biotechnological Informations (1-2-0 h)
 Technical Microbiology (2-0-0 h)
 Biosynthesis and Transformation of Metabolites (2-0-0 h)
 Special Laboratory (0-0-3-4 h) Augustín, Miková
 Šmogrovièová, Dömöny, Navrátil
 Šturdík
 Rosenberg
 Antalová, Èertík, Dömöny, Hronská,
 Rosenberg, Šmogrovièová, Šturdík, Šturdíková

8th semester (spring)

Bioanalytical Methods (2-1-0 h)
 Laboratory of Bioanalytical Methods (0-0-2 h)
 Bioengineering (2-2-0 h)
 Pharmaceutical Biotechnologies (2-0-1 h)
 Ecochemical Biotechnologies (2-0-1 h)
 Special Laboratory (0-0-6 h) Šajbidor
 Miková, Sláviková, Navrátil, Tkáè, Zigová
 Báleš, Polakoviè, Slugeò
 Šturdíková, Mináriková
 Rosenberg, Dercová
 Augustín, Dercová, Krištofíková, Malík, Navrátil,

9th semester (autumn)		Rosenberg, Slugeò, Šajbidor, Šmogrovièová, Šturdík, Sturdíková, Tkáè, Zigová
Food Biotechnology	(2-0-1 h)	Malík, Slugeò
Malting and Brewing	(2-0-1 h)	Šmogrovièová, Dömény
Chemistry and Microbiology of Wine	(2-0-1 h)	Malík, Slugeò, Völlek
Microbial Biomass and Distillery	(2-0-1 h)	Augustín, Šmogrovièová, Dömény
Biochemical and Genetical Regulations	(2-0-1 h)	Šturdík, Antalová
Special Laboratory	(0-0-6 h)	Augustín, Èertík, Dercová, Dömény, Krištofíková, Malík, Navrátil, Rosenberg, Slugeò, Šmogrovièová, Šturdík, Sturdíková
10th semester (spring)		
Diploma Work		
B. PhD Study		
Biochemical Technology	(3 h)	Augustín

IV. CURRENT RESEARCH PROJECTS

A. Application of microorganisms in food industry and agriculture – biotechnological aspects. (Ján Šajbidor)

1. We have isolated the ethanol-tolerant and chemoresistant yeast strains that can be utilize in the wine and spirit technologies. Morphological, biochemical and technological characteristic of the isolates were characterized.
2. Osmotolerant strains of the brewers yeasts suitable to ferment highly concentrated wort was isolated and tested in laboratory conditions and in the real technological process.
3. The microorganisms from contaminated environment suitable for the bioremediation technologies were isolated. We developed an empirical model expressing distribution of hydrophobic pollutants. With the use of QSBR methods, we will try to predict their degradation degradability.
4. Based on the study of the homeoviscous adaptation mechanism of the cell membrane, we have tested the technologically useful substances that protect the cell during the technological processes (high level of ethanol, temperature and osmotic changes, dehydration and anabiosis, etc.). By activation of the own adaptation mechanism of the cell, we will try to increase survival of the cells in the extreme conditions.

B. Immobilized technologies: Implementation of new immobilization techniques/technologies into microbial and plant fermentations and biotransformations and their industrial applications (E. Šturdík)

The project aims to integrate up-to-date knowledge of material engineering of supports (new hydrogels and composite materials for capsule cell immobilization, new methods of exact measuring of mechanical properties of hydrogel supports), immobilization methods (new gelation techniques), methods of preparation of immobilized cells with uniform size and shape in volumes needed for industrial application, knowledge of effect of immobilization process to physiological state and metabolism of cells and microbial and plant fermentation biotechnologies, biotransformations and xenobiotics biodegradations. It should result into rational introduction of immobilization processes into biotechnological productions, which research and development in traditional version have already been in the advanced research phase of. The most perspective are: fermentation of starch hydrolysates to ethanol, primary and secondary beer fermentation, tensid-like xenobiotics degradation. The project is oriented to solve all aspects of the problem during scaling-up within 3 years: selection of support and immobilization method, investigation of properties of immobilizates, design of appropriate bioreactor and quantitative definition of fermentation behavior.

V. COOPERATION

A. Cooperation in Slovakia:

VÚL Modra
 Institute of Drug Research, Modra
 Soil Fertility Research Institute, Bratislava
 Institute of Preventive and Clinical Medicine, Bratislava
 Faculty of Pharmacy, Comenius University, Bratislava
 Institute of Experimental Pharmacology, Slovak Academy of Science, Bratislava
 Institute of Ecobiology, Slovak Academy of Science, Bratislava
 Institute of Chemistry, Slovak Academy of Science, Bratislava
 Likopol, Bratislava
 Allcop, Bratislava
 Research Institute of Viticulture and Oenology, Bratislava
 Brewery, S.t.e.i.n., a.s., Bratislava
 Brewery, Codecon, Svätý Jur
 Wine Establishments in Bratislava-Raèa, Pezinok, Sereï , Nitra, Tibava
 Slovafarma, Hlohovec
 Material Technology, Bratislava
 Slovnaft, Bratislava
 Biotika, Slovenská ¼upèa
 Ekopol, Bratislava

C. Membership in Domestic Organizations and Societies:

Slovak Society of Biotechnology, Bratislava (J.Augustín, K.Dercová, D.Slugeňová)
 Slovak Society for Biochemistry and Molecular Biology, Bratislava (J.Augustín)
 Slovak Society for Agriculture, Forestry, Food and Veterinary Sciences, Bratislava (J.Šajbíder, D.Slugeňová)

D. Membership in International Organizations and Societies:

Editorial boards of the journal Kvasný průmysl, Prague, Czech Republic (F.Malík, D.Šmogrovičová)
 ECE Governments on Science and Technology of The United Nations, Geneva, Switzerland (J.Augustín)
 Member of the EBC Brewing Science Group, Zoeterwoude, The Netherlands (D.Šmogrovičová)
 Czech-Slovak Society of Microbiology, Bratislava (J.Augustín, K.Dercová, D.Hájma, D.Šmogrovičová, M.Šturdíková)
 SETAC-Society for environmental Toxicology and Chemistry (R.Tandlich)

E. CEEPUS PROGRAMME

Number H-0115, Green Network in Central Europe (Šmogrovičová D., Dömeny Z.) Coordinator: Szent Istvan University, Buda Campus (University of Horticulture and Food Industry)
 University of Agriculture, Forestry and Renewable Natural Resources, Vienna

Mendel University of Agriculture and Forestry, Brno
 University of Agriculture in Wrocław
 University of Agriculture in Nitra
 Josip Juraj Strossmayer University of Osijek
 Slovak University of Technology in Bratislava
 University of Ljubljana

G. Visitors from Abroad:

Assoc.Prof.J.Čepička University of Chemical Technology, Prague, Czech Republic, December 2000 (2 days)

H. Visits of Staff Members and PhD Students to Foreign Institutions:

K. Dercová	ISEB4, 4th International Symposium on Biotechnology, Noordwijkerhout, The Netherlands, April 10-12
Dercová	NATO Advanced Research Workshop, Liblice, Czech Rep./June 14-19
Dercová	WCB, The World Congress on Biotechnology, Berlin, Germany, September 3-8

H. Hronská	University of Minho, Braga, Portugal January 2000 (3 months)
H. Hronská	Tomáška s'days, Brno, Czech Republic, June 7-9
F. Malík	Bacchus-Int.Wine Conference, Madrid, Spain , February 4-8
F. Malík	Vinalies 2000, Paris, France, February 10-16
F. Malík	Sélection Mondiales Montréal, Montréal, Canada, March 12-17
F. Malík	International Wine Concours, Bruxelles, Belgium, April 7-11
F. Malík	Vino Zagreb, Zagreb, Croatie, April 12-16
F. Malík	International Wine Concours, Sofia, Bulgaria, May 1-6
F. Malík	Vino Ljubljana , Ljubljana, Slovenia, May 25-29
F. Malík	Vinoforum 2000, Krk, Croatie, June 8-11
F. Malík	International Concurso do Vinhos, Porto, Portugal, July 2-9
F. Malík	International Wine Competition, Ürgüp, Turken, October 10-15
F. Malík	International Wine Conference, Zagreb, Croatie, November 22-24
F. Malík	Vin Agora, Budapest, Hungary, November 25-27
M. Navrátil	COST-TMR Joint Meeting, Vienna, Austria, May 18-20
D. Šmogrovièová	EBC-European Brewing Convention Congress, Plzeò, Czech Republic, September 26-29
R. Tandlich	North Dakota State University, North Dakota, USA, september 2000 (1 year)
R. Tandlich	NATO Advanced Research Workshop, Liblice, Czech Rep., June 14-19
J. Zigová	EPFL, Technical University, Lausanne, Switzerland, July 2000 (1 year)

VI. THESES AND DISSERTATIONS

A. Graduate Thesis (MS Degree) for state examinations after five years of study (supervisors are written in brackets):

Antalová Z.:	New yeast strains for ethanol fermentation. (J. Zigová)
Bednár M.:	Verification of semi-pilot plant continuous system for wort fermentation. (D. Šmogrovièová)
Beòová P.:	Biodegradation activity of actinomycetes. (J. Augustín)
Cekcová K.:	The possibility of exact tasting of wine. (F. Malík)
Cehelníková Ž.:	Microbial production of L(-)-malic acid. (M. Rosenberg)
Demèáková E.:	Determination of neutral lipids in tissues, plasma and serum of rats undergoing special diet (E. Seböková)
Farkašová J.:	Radioisotopic methods application in the monitoring of new synthesizing inzuline analogues. (Š. Zorád)
Foltánová M.:	Preparation of new producents of erythritol. (¼ Krištofíková)
Jiroušová B.:	Production of low-alcoholic fermented beverages. (D. Šmogrovièová)
Kolenová K.:	Semicontinuous bioconversion cis-epoxysuccinate- tartrate by Nocardia tartaricans. (M. Rosenberg)
Kováèová S.:	Biodegradation activity of streptomyces. (J. Augustín)
Kyse¾ová Z.:	Biodegradation of pentachlorophenols in soil. (K. Dercová)
Martišková M.:	Chlorobenzoates as the intermediates and biphenyl as the inductor of PCB biodegradation. (K. Dercová)
Mašlanková A.:	Conversion of glycerol to dehydroxyacetone by free and immobilised cells of Gluconobacter oxydans. (E. Šturdík)
Turic M.:	Brewing yeast separation using cross-flow microfiltration. (D. Šmogrovièová)
Nováková S.:	Optimisation of ethanol fermentation using immobilised cells. (J. Zigová)
Vajcziková I.:	The influence of environmental stress on yeast lipids. (J. Šajbidor)
Voštíar I.:	Applications of sol-gel composites in construction of amperometric biosensors. (E. Šturdík)

B. Dissertations (PhD):

Bafrncová P.:	Ethanol production using very high gravity substrates.
Bugan S.G.:	Beer recovery by cross-flow membrane filtration.
Mináriková K.:	Bioactive Secondary Metabolites of the Strains Pyrenophaeta species and Penicillium funiculosum.
Pátková J.:	Very high gravity wort fermentation.
Tkáè J.:	Biosenzors with use of Gluconobacter oxydans and galactose oxidase.

VII. PUBLICATIONS

A. Journals (*registered in Current Contents)

VI. CURRENT RESEARCH PROJECTS

A. Cytotoxicity of novel xenobiotics and their mode of action (Milan Miko)

The primary aim of our group is the identification and evaluation of potential anti-cancer agents. The main results are as follows:

- Therefore cytotoxicity and mode of action of 14 novel derivatives of N(2-alkanoyloxy-ethyl)trimethylammonium bromides (ATAB) have been investigated using Ehrlich ascites carcinoma (EAC) cells. From a homologous series of ATAB one of the most effective compounds (primary screening) with the alkyl chain containing octadekanoyl (C=18) was chosen for further biochemical studies to establish the primary site(s) of the action of compound. The compound inhibited biosynthesis of macromolecules (DNA, RNA, proteins), aerobic glycolysis of EAC cells and endogenous respiration proportional to the tested concentration. We assumed that the inhibitory effects could be the consequence of membrane effect of amphiphilic compound. Further, the effect of novel anticancer agent of oracine, which is at the present in the 2nd phase of clinical trials, on activities of topoisomerases I and II, which were isolated from nuclei of EAC cells and mouse liver, has been studied. Oracine at concentration of 5 µmol/l inhibited activity of topoisomerase II by 100 %.
- In the frame of mode of action of 8 novel isotiocyanate derivatives (ITCs) was found out, that two carcinoma cell lines (A2780, A431) appeared extremely sensitive to the majority of the tested ITCs (ID50 = 2.2-8.0 µmol/l). The tested ITCs modified the cell cycle of carcinoma cell lines (A2780, A2780/ADR, A431) and sarcoma cell lines (B-5GT, BP6-TU2), as well as leukemic cell line (JURKAT), mainly at 10 µmol/l and 5 µmol/l. The gradual inhibition of cell proliferation was observed, characterised by decreasing of percentage of cells in G0/G1 phase and accumulation of cells in S and G2/M phases of the cell cycle. Four from the five tested ITC derivatives showed the ability of strong induction of apoptosis (34-27%) in A2780 carcinoma cells.
- Four trisubstituted quinazoline derivatives exerted a significant effect on *E. coli*, *P. aeruginosa*, *S. aureus* and *B. subtilis* (IC50 < 100 mg/l) and influenced the specific growth rate. The results of primary screening for cytotoxicity of eighteen plant extracts showed that the extracts which have manifested 100% toxicity on HeLa cells come from the family Fabaceae, Rosaceae, Oleaceae and Staphyleaceae. The cytotoxically effective extracts represent three different types of cytotoxic effect – acute, delayed and combined effect. The effect of Cu tetraaza macrocyclic complex on the glutathione status was examined and the possible mechanism of this anticancer-membrane targeting drug was studied. In the frame of genotoxic effects of Cu(II) complexes of mephenamate, flufenamate, acetylsalicylate was found that these compounds statistically significantly decreased the number of revertants induced by 2-aminoanthracene and 2-aminofluorene. This antimutagenic activity is associated with the copper properties to participate in a number of different biological processes and its interaction with DNA. The genotoxic effects of lignin and selected degradation products of lignin were studied.

B. Biochemical processes underlying fungal differentiation and secondary metabolism (%udovít Vareèka)

Several aspects of *Trichoderma viride* physiology were studied during the project. Effects of azalomycin F on the Ca²⁺ homeostasis were described in detail and was shown that this compound influences Ca²⁺ fluxes across all but mitochondrial and vacuolar membranes and, as a consequence, increases the cytoplasmic Ca²⁺ concentration. This novel effect is even more pronounced in *S. cerevisiae* and suggests that azalomycin F could serve as a method for emptying the fungal Ca²⁺ stores. Furthermore, the effort has been made to characterize the metabolism of *T. viride* mycelia. It was

found that the development of submerged mycelia is accompanied with the burst of respiratory activity between 24-48 h of cultivation. The respiratory quotients indicate the oxidative character of metabolism. However, upon transferring submerged mycelia to anaerobic environment, ethanol appeared in the medium. Surprisingly, ethanol appeared in the medium also during the surface cultivation. These evidence which were complemented by independent approaches indicate that *T. viride* is able also of fermentative metabolism under certain conditions. Other products of fermentative metabolism are currently being studied. The study of the glutamate decarboxylase (GAD) activity in *T. viride* was continued. It was found that this activity was sensitive to cyclosporin A in an allotopical manner suggesting that GAD can be regulated by cyclin and/or calcineurin. Furthermore, several mutants of *T. viride* with the defect in the life cycle were isolated. Two of them were found to have also defect in the activation of GAD by light. The antimicrobial effects of newly synthetized complexes of Cu(II) with N-donor ligands such as nicotinamide, as well as Cu(II) complexes containing 2-methylthionicotinate, and isonicotinamide and novel Schiff's bases (derivatives of quinolines and pyrimidines) were studied. They exerted an appreciable antibacterial and antifungal activity which affected also the mycelial morphology of fungi.

V. COOPERATION

A. Cooperation in Slovakia

Institute of Chemistry, Slovak Academy of Sciences, Bratislava

Institute of Animal Physiology and Biochemistry, Slovak Academy of Sciences, Bratislava

Institute of Molecular Physiology, Slovak Academy of Sciences, Bratislava

Institute of Animal Biochemistry and Genetics, Slovak Academy of Sciences, Ivánka pri Dunaji

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories:

Teaching laboratory I
Teaching laboratory II

B. Research Laboratories:

Laboratory of ceramics
Laboratory of glass
Laboratory of inorganic binders
Laboratory of sol/gel
Laboratory of inorganic powders synthesis
Laboratory of thermal analysis
Laboratory of calorimetry
Scanning electron microscopy laboratory
X-ray diffractometer laboratory

III. TEACHING

A. Undergraduate Study

1. Introductory Courses

6th semester (spring)

Materials technology	(2-0 h)	Majling
Semestral project	(0-4 h)	Jamnický, Kákoš, Kovár, Kozánková, Laèek, Sedláèek

2. Advanced Courses

7th semester (autumn)

Inorganic chemistry III	(2-2 h)	Jamnický
Solid state physics	(2-0 h)	Smrèková
Technical mineralogy	(1-1 h)	Svetík
Applied thermodynamics	(2-2 h)	Pach
Raw materials and mechanical operations	(3-0 h)	Laèek, Svetík
Specialised laboratory I	(8 h)	Kákoš, Kovár, Palou, Sedláèek, Smrèková, Svetík

8th semester (spring)

High temperature processes	(2-1 h)	Jesenák, Kovár
Applied heat technique	(2-1 h)	Holková, Jamnický, Kákoš, Kozánková,
Specialised laboratory II	(8 h)	Smrèková Jamnický, Smrèková

Factory praxis

9th semester (autumn)

Technology of spec. inorg. materials	(2-0 h)	Majling, Kákoš
Inorganic binders technology	(2-0 h)	Laèek, Palou
Technology of ceramics	(2-0 h)	Hrabì , Majling, Smrèková

Technology of glass Specialised laboratory III	(2-0 h) (10 h)	Jamnický, Pach Majling, Palou, Rebroš, Sedláček, Smrková
10th semester (spring) Diploma work laboratory	(30 h)	Hrabí, Jamnický, Pach, Palou, Smrková

IV. CURRENT RESEARCH PROJECTS

A. Chemical and structural assumption for immobilization of toxic materials by cementing, vitrification and ionic-exchange methods (Ján Majling)

The samples of hydroxyapatite - $\text{Ca}_5(\text{PO}_4)_3\text{OH}$ were prepared in a form of the granular dried and sintered material, in a form of beads and thin fibres as well as in a form of the cylindrical extrudates of different diameters. The substrates serve to study ionic exchange of $\text{Pb}^{2+}/\text{Ca}^{2+}$ from liquid media.

By drying of colloidal solution of hydroxyapatite thin transparent layer xerogels have been prepared with subsequent measurement of their optical transmittance with temperature. The expansion of the hydroxyapatite pellets has been confirmed by this method at temperatures above 1200 °C.

By hydration of especially prepared clinker phases (C_2S , $\text{C}_4\text{A}_3\text{S}'$, CS') ettringite has been prepared to investigate the immobilization of Cr^{6+} ions. Separately a sample of ettringite has been prepared by its in situ precipitation in solutions containing Cr^{6+} ions.

B. Electrically conductive oxide glasses containing copper cations. Preparation, structure and physical properties (Miroslav Jamnický)

Glass electrolytes or superionic conducting glasses are promising materials for their technological application to microelectrochemical devices such as sensors, batteries and electrochemical displays. A wide variation in composition, configurational flexibility and chemical durability has been a motivation for their studies and developing the new systems and compositions.

The Cu^+ ion conducting glasses are known for very limited glass-forming compositions in contrast to the Ag^+ ion conducting glasses which have been obtained in many systems. The Cu^+ ion conducting glasses are mainly restricted to the system containing P_2O_5 , MoO_3 and WO_3 .

The possibility to achieve the high ionic conductivity in a new Cu^+ glass system was studied. The main scientific results were obtained as follows:

- determination of optimum procedures for preparing Cu^+ ion conducting glasses in the systems $\text{CuI-Cu}_2\text{O-P}_2\text{O}_5$, $\text{CuI-Cu}_2\text{O-P}_2\text{O}_5-\text{MoO}_3$ and $\text{CuI-Cu}_2\text{O-P}_2\text{O}_5-\text{WO}_3$,
- determination of the arrangement of main structural units in these glasses and characterization of their thermal and electrical properties,

determination of new relationships among the composition, the structure and the conductivity of glasses under study.

C. Design of microstructure and properties of oxide sol-gel materials by seeding of sols and by polymer additives (Ladislav Pach)

The aim of the research was to study the effect of seeding (by alpha- Al_2O_3 , alpha- Fe_2O_3 , and $\text{Fe}(\text{NO}_3)_3$) on crystallisation of alpha- Al_2O_3 in boehmite derived gels. Original results were obtained for gels seeded with $\text{Fe}(\text{NO}_3)_3$. By several methods (Mossbauer and luminescent spectroscopy, on-line optical transmittance, DTA, GTA and the surface and pores measurements) was proved that seeding of boehmite gels with $\text{Fe}(\text{NO}_3)_3$ has dominantly the ion (Fe^{3+}), or solution effect on the crystallisation of alpha- Al_2O_3 . Process of crystallisation is similar to that of unseeded gels and not to gels seeded with particulate alpha- Al_2O_3 and alpha- Fe_2O_3 seeds, mechanism of which are attributed as crystallographic. Transparent ceramics were obtained already at ~ 1300°C by seeding of boehmite gel with $\text{Fe}(\text{NO}_3)_3$.

V. COOPERATION

A. Cooperation in Slovakia:

Faculty of Electrical Engineering and Information Technology, Slovak University of Technology, Bratislava

Faculty of Mechanical Engineering, Slovak University of Technology, Trnava

Institute of Inorganic Chemistry, Slovak Academy of Sciences, Bratislava

Research Institute of Building Materials, Slovak Academy of Sciences, Bratislava

Institute of Control Theory and Robotics, Slovak Academy of Sciences, Banská Bystrica

Research Institute of Refractory Materials, Bratislava

Cementáreň Turča, a.s., Turča nad Bodvou (Cement Producer)

Považská cementáreň, a.s., Ladce (Cement Producer)

Hirocem, a.s., Rohožník (Cement Producer)

Eurodom, s.r.o., Lučenec (Constructional System)

Novoker, a.s., Lučenec (Wall Tiles Producer)

CERAM Česká republika, a.s., Nové Sady (Electroceramics Producer)

TS, a.s., Bratislava (Technical Glass Work)

SMZ, a.s., závod Jelšava (Magnesite Clinker Plant)

Izomat, a.s., Nová Baňa (Mineral Fibre Insulation Materials Producer)

Ekogeos, s.r.o., Bratislava (Ecological and Geological Service)

ESTAP, s.r.o., Bratislava (Enamelled Ware Plant)

B. International Cooperation:

Fachhochschule Münster, Steinfurt, Germany

- Crystallisation of alpha- Al_2O_3 from boehmite gels

Intercollege Materials Research Laboratory, The Pennsylvania State University, University Park, PA, USA

- Synthesis of Inorganic Materials

Department of Chemistry, Materials and Forensic Science, Faculty of Science, University of Technology, Sydney, Australia

- Light transmittance thermal analysis of hydroxyapatite xerogels

Hamamatsu Corporation, Bridgewater, New Jersey, USA

- Translucent ceramic plates

C. Membership in Domestic Organisations and Societies:

Slovak Silicate Society, Bratislava

Union of Glass Industry, Bratislava

Slovak Glass Society, Lednické Rovne

Association of Science Technical Societies, Bratislava

D. Membership in International Organisations and Societies:

Crystallographic Society, Bratislava

Silicate Society, Prague, Czech Republic (Z. Hrabi)

American Ceramic Society, USA (L. Pach)

The International Society for the Environmental and Technical Implications of Construction with Alternative Materials (ISCOWA), Netherlands (J. Majling)

Institute of Materials, U.K. (J. Majling, J. Strigáè)

G. Visitors from Abroad:

Ing. J. Knì zek, CSc., Ing. M. Sedláková

VÚSH, a.s. Brno, Czech Republic, April 2000 (1 day)

Ing. V. Žák

V.&R. Consulting P/L, Heatcote, Australia, June 2000 (2 days)

Ing. V. Tì hník, Ing. Radovan Neèas

VÚSH, a.s. Brno, Czech Republic, June 2000 (1 day)

Prof. A. S. Ray

Department of Chemistry, Materials and Forensic Science, Faculty of Science, University of Technology, Sydney, Australia, September 2000 (3 days)

Dr. A. Azzedine

Department of Engineering Materials, Faculty of Engineer Science, University of Boumerdes, Algeria, September 2000 (7 days)

H. Visits of Staff Members and PhD Students to Foreign Institutions:

½ Baèa

Fachhochschule Münster, Steinfurt, Germany, March-June 2000 (3 months)

J. Sedláèek

XIIth International Conference on Refractory Materials, Praha, Czech Republic, March 27-29

½ Baèa, Z. Holková, M. Palou

International Conference Solid State Chemistry 2000, Praha, Czech Republic, September 3-8

Z. Holková

52nd Congress of Chemical Societes, Èeské Budìjovice, Czech Republic, September 16-20

Z. Hrabi, M. Jamnický, J. Majling, L. Pach,
E. Smrková

International exhibition CERAMITEC 2000, München, Germany, October 17-19

J. Sedláèek

ICS Workshop Process Simulation in Composite Materials, Trieste, Italy, November 19-26

VI. THESES AND DISSERTATIONS

A. Graduate Theses (MS Degree) for state examinations after five years of study (supervisors are written in brackets):

Arkosiová M.: Preparation, structure and properties of Cu⁺ - ionic conductive oxide glasses (M. Jamnický)

Barusová L.: The influence of raw material properties on the quality of frits and white glossy glazes (M. Jamnický)

Bodáková M.: The influence of brick raw material from locality of Staròa on quality of ceramic body in brick plant of Tornáø (Smrková)

Filo D.: Comparison of physico - chemical properties of solder glasses for bulb production (J. Chocholoušek)

Gašparoviè I.: Substitution of alumina cements in dry plaster mixtures (Z. Hrabi)

Koòaríková L.: Biodegradability of mineral fibres in model solutions (L. Pach)

Pagáèová J.: The study of limestone admixture influence on portland cement properties (M. Palou)

Petrušková V.: The study of the influence of storage conditions on corrosion of commercial glasses (M. Jamnický)

Piatriková G.: The cause of formation and increase of inhomogenities in glass melts for container glass production (M. Jamnický)

Rebroš M.: The surface corrosion of commercial glass in automatic washers (L. Pach)

Štaòová I.: The kinetics of barium crystal leaching by liquid media (M. Liška)

Štefanové M.: The possibilities to prepare low energy cements including portland raw meal, fly ashes and gypsums (M. Palou)

Pritula O.: Immobilization of liquid radioactive wastes by cementing procedures (E. Smrková)

B. Dissertations (PhD):

Štulajterová-í urovèíková R.: Preparation and sintering of hydroxyapatite gels (J. Majling)

Research Fellows:
Antošová Monika, Besedová Eva, PhD; Godó Štefan, PhD; Hroncová Viera, Ilieová Viera; Juma Mohammad, PhD; Marták Ján; Remiárová Bibiana, PhD; Sabolová Erika; Schlosser Štefan, PhD; Steltenpohl Pavol, PhD; Šoós Miroslav, Žajdlík Róbert

PhD students:
Blažej Michal; Dolgoš Ondrej; Grznárová Gabriela; Kertesz Robert; Klein Jaroslav; Madlová Alexandra; Molnár Attila;

Technical Staff:
Dobrovodská Mária; Drahošová Anna; Gering Tomáš; Herzán Ľubomír; Hinca Miloš; Chocholová Mária; Luknár Karol; Marenéiková Miroslava; Ördögová Marta; Rizman Vilim;

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories

Laboratory of Chemical Engineering
Laboratory of Unit Operations
Laboratory of Reaction Engineering
Laboratory of Membrane Processes
Laboratory of Chemical Engineering Thermodynamics

B. Research Laboratories

Laboratory of Chemical Reaction Kinetics and Reaction Engineering
Laboratory of Heat Transfer
Laboratory of Hydrodynamics and LDA
Laboratory of Fluid - Particle Dynamics
Laboratory of Membrane Processes and Membrane Reactors
Laboratory of Adsorption
Laboratory of Bioreaction Engineering
Laboratory of Enzyme Engineering
Laboratory of Phase Equilibria

III. TEACHING

A. Undergraduate Study (Bachelor of Chemical Technology)

1. Introductory Courses

1st semester

Material Balances of Technological Processes (2 h)

M. Šeféiková, P. Aéai, S. Bafrncová, E. Besedová, M. Blažej, O. Dolgoš, J. Markoš, O. Mierka, V. Ilieová, B. Remiarová, P. Steltenpohl, M. Polakovič, V. Štefuca, P. Timár, M. Vajda, R. Žajdlík

5th semester

Chemical Engineering I

Lectures (2 h)
Exercises (3 h)

V. Báleš, Ľ. Jelemenský
P. Aéai, M. Antošová, S. Bafrncová, D. Bobok, E. Graczová, I. Havalda, O. Mierka, J. Stopka, J. Šeféik, M. Šeféiková, P. Timár, M. Vajda
P. Aéai, M. Antošová, M. Bafrnec, S. Bafrncová, D. Bobok, E. Graczová,

Chemical Engineering Laboratory I (1 h)

G.Grznárová, I.Havalda, M.Juma,
R.Kertesz, O.Mierka, J.Longauer, J.Šefélk,
M.Šeféková, P.Timár, M.Vajda

6th semester

Chemical Engineering II

Lectures	(2 h)	J.Dojèanský, V.Štefuca, M.Polakoviè,
Exercise	(3 h)	P.Aèai, S.Bafrncová, F.Besedová, J.Dojèanský,

Chemical Engineering Laboratory II.

(3 h)

E.Graczová, I.Havalda, O.Mierka, J.Stopka,
V.Štefuca, Š.Schlosser, J.Šefélk
P.Aèai, M.Antošová, D.Bobok, O.Dolgoš,
E.Graczová, G.Grznárová, I.Havalda, J.Klein,
A.Madlová, M.Juma, B.Remiarová, E.Sabolová,
J.Stopka, J.Šefélk, R.Žajdlík

Engineering Thermodynamics

Lectures	(2 h)	M.Šeféková, P.Timár
Exercises	(2 h)	M.Šeféková, P.Timár, O.Mierka
Technological Projects	(4 h)	I.Havalda, ¼Jelemenský, J.Longauer, Langfelder, J.Markoš, O.Mierka, M.Polakoviè, V.Štefuca, M.Soóš, P.Timár, M.Vajda

Equipment of Chemical and Food Technology (2-2 h)

B. Graduate Study (Master of Chemical Technology)

1. Advanced Courses

7th semester

Chemical Engineering

Chemical Engineering Thermodynamics

Lectures	(2h)	E.Graczová
Exercises	(2 h)	E.Graczová
Diffusional Separation Processes	(2 -2 h)	J.Dojèanský
Hydrodynamics and Heat Transfer		
Lectures	(2 h)	J.Stopka
Exercises	(2 h)	I.Havalda
Laboratory	(1 h)	J.Stopka
Mass Transfer Theory	(2-1 h)	D.Bobok
Computer Chemical Engineering Calculations	(3 h)	M.Soóš, A.Molnár, S.Bafrncová
Mathematical Methods in Chemical Engineering	(4 h)	I.Havalda

Safety Engineering

Chemical Engineering Thermodynamics

Lectures	(2h)	E.Graczová
Exercises	(2 h)	P. Steltenpohl
Hydrodynamics and Heat Transfer		
Lectures	(3 h)	J.Stopka
Exercises	(2 h)	I. Havalda
Laboratory	(1 h)	J.Stopka
Mass Transfer Theory	(2-1 h)	D.Bobok
Fire Engineering	(2 -2 h)	K.Balogh
Computer Chemical Engineering Calculations	(3 h)	M.Soóš, ¼Jelemenský, S.Bafrncová
Mathematical Methods in Chemical Engineering	(4 h)	I.Havalda

8th semester

Chemical Engineering

Chemical Reaction Engineering I

Lectures	(2 h)	J. Markoš
Exercises	(2 h)	M. Vajda
Laboratory	(2 h)	J. Markoš
Safety Engineering	(2-2 h)	¼Jelemenský

Bioprocess Engineering I

Lectures	(2 h)	V.Báleš
Exercises	(1 h)	M.Polakoviè
Selected Unit Operation	(2 h)	D.Bobok, Š.Schlosser
Project of Equipment of Chemical and Food Technology		
Advanced Laboratory of Chemical Engineering I	(3h)	M.Bafrnec, I.Langfelder
	(3 h)	J.Šefélk, D.Bobok, E.Graczová, J.Markoš, O.Mierka, J.Stopka, V.Štefuca, Š. Schlosser, P.Timár

Safety Engineering

Chemical Reaction Engineering I

Lectures	(2 h)	J. Markoš
Exercises	(2 h)	M. Vajda

Safety Engineering	(2-2 h)	V. Fecková
Explosion Prevention	(2-2h)	D. Skarba
Process Systems Engineering	(2 h)	L. Jelemenský
Laboratory of Process Systems Engineering	(2 h)	M. Šoós
Project of Equipment of Chemical and Food Technology	(3h)	M.Vajda, J. Longauer
9th semester		
Chemical Engineering		
Chemical Reaction Engineering II		
Lectures	(2 h)	J. Markoš
Exercises	(1 h)	B.Remiarová
Process Systems Engineering		
Lectures	(1 h)	L. Jelemenský

Systems Engineering		

IV. CURRENT RESEARCH PROJECT

A. Engineering approaches to the investigation of properties of ligand-enzyme-carrier systems in biocatalysis and bioseparations (Milan Polakoviè)

The project incorporates several different problems related to the heterogeneous liquid-solid systems employed in biotechnology. The main areas covered by the project include the optimization of flow microcalorimetry using mathematical modelling for the analytical applications of the biocatalytic systems under study, investigation of enzyme systems with complex kinetics and characterisation of morphological and diffusional properties of carriers used in biocatalysis and biotransformation. The particular goals include the development of methodologies for the identification of mechanisms of enzyme inactivation using the integration of experimental techniques at the quantitative level; the development of chemical engineering data for the optimization of the design of the fructooligosaccharide production

process and for the improvement of biocatalyst properties; the formation of the kinetic equation of triacylglycerols hydrolysis by yeast lipase and its implementation for the description of fermentation production of lipase; modelling of kinetics of potato starch hydrolysis by glucoamylase; the determination of the degree of instability of casein micelles in relation to the degree of hydrolysis of kappa-casein using an experimental procedure of the separation of unstable aggregated micelles and investigation of kinetics of destabilisation of micelles via mathematical modelling of sequential processes; study of the kinetics of glycoprotein sorption at lectin ligands.

B. Immobilized biotechnologies: Implementation of new immobilization methods into microbial and plant fermentations and biotransformations, and their industrial applications (Vladimír Štefka)

The aim of the project is a systematic development of immobilized biotechnologies. This can be achieved most probably in case of biotechnological processes where the state of the knowledge or the process optimization has reached maximum level and the further increase of the process effectiveness requires the development of new unconventional ways. This evolution should bring more extensive use of continuous processes. The increase of the processes in biotechnology will accelerate their introduction in the industrial use. The project outputs will be information about biochemistry, bioengineering and process parameters that will be used in practical application of investigated processes. The study is oriented toward implementation of immobilization techniques into following processes:

- i) ethanol production by fermentation of starch hydrolysates,
- ii) primary and secondary wort fermentation,
- iii) butyric acid production by transformation of butanol,
- iv) biotransformation/biodegradation of xenobiotics,
- v) secondary metabolite production by plant fermentation.
- vi) dextrose sirup production by maltodextrin hydrolysis.

C. Thermal diffusivities of orthogonal anisotropic materials (Milan Bafrnec)

Elaboration of a model of heat transfer in orthogonal anisotropic composite materials with a course oriented structure. This model will be used for the proposal of a method for measuring thermal diffusivities of such materials. In addition, this method will enable the measurement of the difference in thermal diffusivities in particular directions.

In this year, a suitable mathematical model describing the nonstationary heat transfer in composite materials with a course fiber structure has been proposed. In the choice of parameters and the model of material structure the feasibility solution of the mathematical model was taken into account. Various samples of such composite materials were prepared and their measurement confirmed that there is a great difference between the thermal diffusivity in the direction perpendicular to the fiber layer and in the direction along the composite material fibers.

Models of industrial processes of tire vulcanisation were derived and solved.

D. Mathematical and experimental modelling of coal combustion(Jozef Markoš)

Mathematical and experimental modelling of coal combustion with the aim of its maximal energetic utilization and decreasing of sulphur dioxide emissions.

E. Modelling of mass-transfer through membranes and immobilized interfaces directed to formation and modelling of hybrid systems with biochemical or chemical reactions and membrane separation (Štefan Schlosser)

The possibility of permeate flux enhancement based on the surface modification of a ceramic membrane was investigated in crossflow microfiltration of pure beer yeast suspensions. The stamped membrane had a helical reversed thread to increase turbulence in the feed flow. A stamped membrane has several advantages comparing with a smooth one: flux, as well as limiting flux are higher at the same velocity of the feed, power consumption per unit volume of permeate is lower for the stamped membrane and increases with increasing crossflow velocity of the feed. Modelling of the flux decline indicates different mechanisms of fouling for smooth and stamped membranes.

The mechanism of transport of Ag, phenylalanine (Phe) and other acids through liquid membranes has been studied in a two compartment cell. As carriers for Ag octylphenylmethanesulfide (MF18, novel carrier) and triisobutylphosphinesulfide (Cyanex 471X) were used. The advantage of the carrier MF18 is better kinetics of stripping resulting in the same rate of transport or higher in comparison with Cyanex 471X, despite the much lower distribution coefficient of Ag with MF18. The dependence of the transport rate of Phe vs. carrier (DEHPA) concentration goes through a maximum indicating probably aggregation in the membrane phase at higher concentrations of carrier and/or complex. In all systems studied it has been found that the initial flux of permeant through extraction interface is higher than the maximum flux through the strip interface. In some systems this fact leads to a conclusion about the decisive role of kinetics of the processes on stripping interface for the overall transfer rate.

Equilibrium data for butyric acid and dimethylcyclopropanecarboxylic acid with tri-n-octylamine as an extractant have been completed and modelled. These data were interpreted by a chemical reaction mechanism, a related model was tested and the equilibrium constants were estimated. New equilibrium data have been estimated for Phe, silver and HCA.

V. COOPERATION

A. Cooperation in Slovakia

Institute of Chemistry, Slovak Academy of Sciences, Bratislava

Institute of Experimental Physics, Slovak Academy of Sciences, Košice

Slovak Agricultural University, Nitra

LikoSpol, Bratislava

Fermas, Slovenská Ľupča

SKY Life, s.r.o., Malacky

KINEX, a. s.

SCP, a.s. Ružomberok

PETROCHEMA, a. s. Dubová

RHODIA Industrial Yarns Slovakia, a. s. Humenné
 Chemical Enterprise Nováky
 Lhodol, Iím. Rajec
 Combin, Iím. Tisovec
 Research Institute for Milk Products, Žilina
 Slovakoferma, a.s. Hlohovce

B. International Cooperation:

CIBA, Swiss
 - synthesis of IRGANOX L67
 Wroclaw Institute of Technology, Wroclaw, Poland
 - starch hydrolysis and starch enzyme inactivation
 Laboratoire Environnement et Minéralurgie, UMR INPL et CNRS N° 7569, Nancy, France
 - organic pollutants removal from drinking water by activated coal adsorption
 University of Lund, Lund, Sweden
 - flow microcalorimetry
 Oakland University, Rochester, USA
 - amperometric sensors for the determination of NO
 - monitoring of new anticancer drugs by HPLC

University of Perugia, Perugia, Italy
 - study of cyanocomplexes of Cr
 - development of thermometric sensors for investigation of enzyme properties

Institute für Technische Chemie der Universität Hannover, Hannover, Germany
 - immobilized enzymes applications
 Bundesforschungsanstalt f. Landwirtschaft (FAL), Braunschweig, Germany
 - immobilized enzymes applications

Consejo superior de investigaciones científicas, Madrid, Spain
 - investigation of immobilized enzyme stability and inactivation

Academy of Sciences of Czech Republic, Prague, Czech Republic
 - study of properties of immobilized lipases

Lab. Membrane Mater. Proc. ENSCM, Montpellier, France
 - joint project INCO Copernicus

ICMAB, Barcelona, Spain
 - joint project INCO Copernicus

Amino GmbH, Hannover, Germany
 - joint project INCO Copernicus

BCS Engineering, Brno Czech Republic
 - joint project INCO Copernicus

Technical University of Bucharest, Romania
 - joint project INCO Copernicus

Res. Centre Macromolecular Materials and Membranes, Bucharest, Romania
 - joint project INCO Copernicus

Technical University of Warsaw, Poland
 - joint project INCO Copernicus

Aston University, Birmingham, UK
 - joint project INCO Copernicus

Universidade do Minho, Braga, Portugal
 - joint project INCO Copernicus

University College London, United Kingdom
 - Grant British Council/STU Bratislava

Acetec, Vienna, Austria
 - EUREKA

Scheidl Umweltanalytic, Vienna, Austria
 - EUREKA

VUOS Pardubice, Czech Republic
 - research cooperation in the EURECA programme

C. Membership in Domestic Organisations and Societies:

Slovak Society of Chemical Engineering (chairman: V. Báleš, member of the general committee: Š. Schlosser)

Slovak Society of Biotechnology (chairman: V. Báleš)

D. Membership in International Organisations and Societies:

European Membrane Society, Toulouse, France (Š. Schlosser, member of the Council)
 European Federation of Chemical Engineering (Š. Schlosser, Slovak delegate of the Working Party for Membranes)
 European Federation of Chemical Engineering (V. Báleš, member of the Executive Board)
 European Federation for Biotechnology (M. Polakovič, member of the Working Party for Applied Biocatalysis)
 European Federation for Biotechnology (V. Báleš, member of the Working Party for Bioreactor Performance and Slovak delegate in the General Assembly)
 American Chemical Society (V. Báleš, member)

E. International Scientific Programs:

1. COPERNICUS
 a/ Inco-Copernicus ERBIC15 CT98 0809." Novel techniques for implementation of immobilized biocatalysts in industrial

processes"

Scientific partner at STU: Dr. Vladimír Štefuca

Coordinator: Dr. Bengt Danielsson (Lund University, Sweden)

Other partner institutions: FAL Braunschweig (D), Technical University of Hannover (D), Amino GmbH, Hannover (D), CSIC, Madrid (E), SAS, Bratislava (SK), AS CR, Prague (CR), BCS Engineering, Brno (CR).

The project started: 1.9.1998

Duration of the project: 3 years

A research project of 7 partners from EU countries, 2 from the Czech Republic, and 2 from Bratislava. It is a Concerted Action project aimed at creating links among partners, research coordination and preparing possible future actions. No money for the research support is available if not the financial support provided by the EU for this project. The main objective of the project is to facilitate the implementation of new materials and techniques into industrial biocatalytic processes. The project involves interdisciplinary trans-national teams to integrate expertise on immobilized biocatalysts. Expertise of partners covers, in particular, the development of the carriers for immobilization, immobilization techniques, methods of characterisation of immobilized biocatalysts, novel approaches for biotransformations, development of bioreactors with immobilized biocatalysts, process monitoring and control, and scaling up processes.

b/ Inco-Copernicus IC15-CT98-0904: "Modelling and design of multiphase bubble bed reactors for advanced food industries"

Responsible at STU: Jozef Markoš

Coordination institution: Aston University, Birmingham, UK

Other partner institutions: Universidade do Minho, Braga, P, Institute of Chemical Processes, Czech Academy of Sciences, Prague CZ.

Duration of the project: November 1998 - October 2001

2. Grant STU/British Council: "Process simulation for environmental and safety assessment"

Responsible at STU: Ľudovít Jelemenský

Coordination institution: University College London.

Duration of the project: 1999 - 2001

3. EUREKA

EUREKA EU 1574: "Lowering Occurrence and Diminishing Effluents/ Pollution at Source - Treatment and Recovery" (acronym: LODE (P) STAR)

Responsible at STU: Štefan Schlosser

Coordinated by VÚOS, Pardubice, Ing. Josef Kotlán

Other partners: Acetec, Vienna (A), Scheidl Umweltanalytic, Vienna (A).

Duration of the project: 1998-2000.

4. INCO Copernicus Programme

IC15-CT98-0147: "Recycling heavy metal ions and organics of biological interest by innovative separation membranes"

Responsible at: STU Stefan Schlosser

Coordinated by Lab. Membrane Mater. Proc. ENSCM, Montpellier (F)

Other partners Technical University of Bucharest (RO), Res. Centre Macromol. Materials Membranes, Bucharest (RO), Warsaw University of Technology (PL), Inst. of Material Science of Barcelona (E).

Duration of the project: January 1999 – 2001

F Visitors from Abroad:

Dr. J. Bryjak

Wroclaw Institute of Technology, P, August 2000, 5 days

Dr. B. Danielsson

DEPARTMENT OF CHEMICAL PHYSICS

Head of the Department:

Assoc. Prof. Viliam Laurinc, PhD

Telephone: ++421-7-52 96 34 20

Fax: ++421-7-52 49 31 98

E-mail: laurinc@cvt.stuba.sk

I. STAFF

Full Professors:

Fedor Valach, DSc

Associate Professors:

Pavol Fedorko, PhD; Oľga Holá, PhD; Viliam Laurinc, PhD; Peter Lukáč, PhD; Teodor Obert, PhD (part-time); Viera Skákalová, PhD (till 31.8.2000)

Assistant Professors:

Július Annus; Peter Benc, PhD (part-time); Ladislav Bušovský; Eva Griačová (part-time); Juraj Griač, PhD (part-time); Soňa Halusková (part-time); Vladimír Lukeš, PhD; Soňa Macková, PhD; Miroslav Tokarék, PhD; Daniela Žilinská

Technical Staff:

Anton Adamko; Marián Babnič; Zdenka Halaburková

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories :

Laboratory of Physics I. (Mechanics, Deformations, Fluids, Heat)

Laboratory of Physics II. (Electrical measurements, DC and AC circuits, Waves, Black body radiation)

B. Research Laboratories:

Laboratory of X-ray Diffraction

Laboratory of Electrical Properties of Conducting Polymers

Laboratory of Gamma Radiation Source

III. TEACHING

A. Undergraduate Study

1. Introductory Courses

1st semester (autumn)

Seminar in Basic Physics (0-2h) Bušovský, Griačová, Holá, Laurinc, Lukáč, Lukeš, Macková, Obert, Tokarék, Žilinská

Physics I. (2-2h) Lukáč, Lukeš

2nd semester (spring)

Physics I. (2-2h) Bušovský, Holá, Laurinc, Lukáč, Macková, Tokarék, Valach, Žilinská

Physics Laboratory I. (0-2h) Annus, Benc, Bušovský, Griačová, Griač, Halusková, Lukáč, Lukeš, Macková, Žilinská

3rd semester (autumn)

Physics II. (2-2h) Bušovský, Holá, Laurinc, Macková, Obert, Tokarék, Žilinská

Physics Laboratory II. (0-2h) Annus, Benc, Griač, Griačová, Halusková, Macková, Tokarék

2. Advanced Courses

8th semester (spring)

Statistical Thermodynamics (2-1h) Laurinc

IV. CURRENT RESEARCH PROJECTS

A. Effect of gamma- and/or laser irradiation on the structure and critical temperature of copper-oxygen and fulleroid high-temperature superconductors as single crystals (Fedor Valach)

1. X-ray structure investigation of gamma- and/or laser irradiated single crystals of $\text{La}_x\text{Sr}_{1-x}\text{CuO}_2+\delta$ and C_{60}
2. Evaluation of the correlations of structural parameters versus critical temperature for high-temperature superconductors

3. Bond-valence approach to the copper-copper and copper-oxygen bonding in binuclear copper(II) complexes

4. X-ray crystallographic investigation of the temperature induced copper-oxygen isomers as single crystals

B. Theoretical study of thermo- and photochromism of thiophene based polymers (Viliam Laurinc)

Common project with partners from the Dept. of Organic Chemistry, Slovak Academy of Sciences, and Institute

of Chemistry at the Comenius University. The main goal of the project is the analysis of optical absorption and luminescence data obtained for variety of synthesised new thiophene oligomers and polymers. The quantitative trends of changes in optical properties are analysed by using the methods of quantum chemistry and theoretical simulations.

C. Optimization of didactic methods in physics (Oľga Holá)

1. Formation of examination tests, use of microcomputer sets in the physical laboratory and introduction of interactive educational computer programmes
2. Pedagogico-psychologico-sociologic investigation of the motivation and social conditions of university students

V. COOPERATION

A. Cooperation in Slovakia:

Faculty of Electrical Engineering and Information Technology, Slovak University of Technology, Bratislava
 Faculty of Mathematics and Physics, Comenius University, Bratislava
 Faculty of Civil Engineering, Slovak University of Technology, Bratislava
 Institute of Physics, Slovak Academy of Sciences, Bratislava
 Institute of Polymers, Slovak Academy of Sciences, Bratislava
 Institute of Inorganic Chemistry, Slovak Academy of Sciences, Bratislava
 Faculty of Natural Science, Comenius University, Bratislava
 VÚJE a.s., Trnava

B. International Cooperation:

Institut für Festkörperphysik, Universität Wien , Vienna, Austria
 - Fullerene and conducting polymer research
 Institut für Physikalische Chemie, Universität Wien, Vienna, Austria
 - Electronic excitation transport in polymers
 Institute of Physics, Czech Academy of Sciences, Prague, Czech Republic
 - Magnetic properties of amorphous alloys
 Department of Inorganic Chemistry, Charles University, Prague, Czech Republic
 - Synthesis of Co complexes
 Institute of Chemistry, University of Wroclaw, Wrocław, Poland
 - X-ray crystallographic research
 Laboratorium für Chemische und Mineralogische Kristallographie, Universität Bern, Bern, Switzerland
 - X-ray crystallographic research
 Department of Materials Science and Metallurgy, University of Cambridge, Cambridge, UK
 - Electron diffraction research
 Universidad de la Laguna, Tenerife, Spain
 - Structural crystallophysics
 Institut für Mineralogie, Technische Universität Wien, Vienna, Austria
 - Crystallographic and structural chemistry
 School of Natural and Environmental Sciences, Coventry University, Coventry, UK
 - Synthesis of conducting polymers
 Chemical Crystallography Laboratory, Oxford University, Oxford, UK
 - X-ray crystallographic research at low temperatures, crystallographic statistics
 Nuclear Research Institut, Řež u Prahy, Czech Republic
 - Emanation thermal analysis
 Aristotle University, Thessaloniki, Greece
 - Natural sorbents - zeolites
 Departement de Recherche Fondamentale sur la Matiere Condensee, Commissariat a l'Energie Atomique, Grenoble, France
 - Conducting polymers

C. Membership in Domestic Organizations and Societies

Union of Slovak Mathematicians and Physicists, Bratislava	(V. Bušovský, P. Fedorko, O. Holá, V. Laurinc, S. Macková, T. Obert, V. Skákalová)
Slovak Physical Society, Bratislava	(V. Bušovský, P. Fedorko, O. Holá, V. Laurinc, S. Macková, T. Obert, V. Skákalová, F. Valach)
Slovak Chemical Society, Bratislava	(F. Valach)

D. Membership in International Organizations and Societies

International Society for Theoretical Chemical Physics, Erlangen, Germany	(V. Laurinc)
European Synchrotron Radiation Society, Paris, France	(F. Valach)
European Physical Society, Budapest, Hungary	(P. Fedorko, O. Holá, T. Obert, V. Skákalová, F. Valach)

H. Visits of Staff Members and Postgraduate Students in Foreign Institutions

P. Fedorko	Departement de Recherche Fondamentale sur la Matiere Condensee, Commissariat a l'Energie Atomique, Grenoble, France (since 8.11.1999))
V. Skákalová	Max Planck Institute, Stuttgart, Germany (since

V. Laurinc

7.12.1999 till 31.8.2000)
CRE Centre, Paris, France (26.6.-29.6.2000)

III. TEACHING

A. UNDERGRADUATE STUDY

6th Semester

Project	0-4 h	members of department
Paper and Printing	2-2 h	P. Krkoška, J. Panák

B. GRADUATE STUDY

7th Semester

Physics of Polymers and Paper	2-2 h	M. Krištofič, Š. Šutý
Chemistry and Analysis of Wood	2-0 h	E. Golis, L. Šutý
Pulping Technology	3-1 h	L. Šutý, M. Vrška
Laboratory	0-8 h	E. Golis, K. Vizárová
Natural Polymers	2-1 h	V. Lužáková, D. Bakoš
Environmental Management in Pulp and Paper Industry	2-0 h	E. Golis, K. Vizárová

8th Semester

Paper Technology I.	3-0 h	P. Krkoška, Š. Šutý
Paper Machines	2-2 h	A. Ěeròanský
Engineering of Pulp Production	1-1 h	L. Šutý, M. Vrška
Chemical Treatment of Wood I.	3-0 h	I. Šurina, M. Vrška
Laboratory	0-8 h	M. Vrška, E. Golis
Visiting of Pulp and Paper Mills	1 week	
Practical Training Course	3 weeks	

9th Semester

Chemical Treatment of Wood II.	2-0 h	I. Šurina, Š. Šutý
Paper Technology II.	3-0 h	P. Krkoška, P. Mišovec
Packaging Materials	2-0 h	P. Mišovec
Laboratory	0-9 h	P. Mišovec, Š. Šutý, I. Šurina
Chemical Aids in Pulp and Paper Industry	1-1 h	V. Lužáková, K. Vizárová
10th Semester		
Thesis	0-27 h	

C. PhD STUDY

1. class	Foreign language (English, German) languages	6 months	Department of
1. class	Macromolecular chemistry	12 months	V. Chrástová
1. class	Technology of polymeric materials Krkoška	12 months	P.
1. class	Physics of polymers	12 months	M. Krištofiè
2-3. class	Preparation of dissertation (instructor)	24 months	Department

IV. CURRENT RESEARCH PROJECTS**A. Papermaking fibres-new process of isolation, modification, recyclation and preparing of paper**

(Assoc. Prof. Pavel Krkoška, PhD)

The project respects the request of Slovak industry of chemical treatment of wood, and chemical technology of pulp and paper. Definition and mathematical description of pulp fibres properties by new delignification and bleaching processes in laboratory and industrial conditions, definition of their permanence and durability was studied. The database of monitoring of emission from pulp and paper industry of Slovak Republic was verified. The analysis of wood raw materials with regard to the content of calcium was studied. With growing demand for deinking at conditions near to neutral pH value, new deinking chemicals become increasingly important. We have formulated three different blends of surfactants and examined their deinking efficiency as flotation aids in a conventional process using also other chemicals as well as in an alternative process without any other chemicals. Their deinking effectiveness was higher compared to traditionally used commercial deinking chemicals.

B. Thermal degradation of plant cell wall polysaccharides

(Ivan Šimkovic, PhD, Igor Šurina, PhD)

Study of the thermal degradation of wood cell wall polysaccharides was used for clarification and possible slowdown of this process. The aspects will be set on protection of wood material against burning, on environmental problems, as well as, on the possible effect on the health of human being. This will be achieved by impregnation of wood materials with water solutions of boric acid, water glass, sodium hydroxide and their mixed solutions and by subsequent precipitation of the formed products in the cell wall by acidification. The effect of ion-exchanging groups on thermolysis will be also studied. The identification of possible cancerogenic compounds formed by thermolysis of starch and their derivatives was also part of the project.

V. COOPERATION**A. COOPERATION IN SLOVAKIA**

1. North Slovakian Pulp and Paper Company, Ružomberok
2. Pulp and Paper Research Institute, Bratislava
3. State Forest Products Research Institute, Bratislava
4. Institute of Wood Ecology, Nitra
5. Technical University, Zvolen
6. Slovak National Archives, Bratislava
7. Institute of Chemistry of Slovak Academy of Sciences, Bratislava
8. Bukóza Co., Vranov
9. AssiDomän Packaging, Štúrovo
10. Union of Pulp and Paper Industry of Slovak Republic, Banská Bystrica

A. Teaching Laboratories:

Laboratory of Water Chemistry

B. Research Laboratories:

Laboratory of Air Protection Technology

Laboratory of Microbiology and Ecotoxicology

Laboratory of Organic Chemistry

Laboratory of Radioecology

Laboratory of Water and Wastewater Technology

Laboratory of Computer Modelling

III. TEACHING

A. Undergraduate Study

5th semester (autumn)

Nuclear Chemistry and Technology I.	(1-1)	Koprda, Dillinger
6th semester (spring)		
Environmental Technology	(2-0)	Piatrik, Ěík, Koprda,
7th semester (autumn)		
Biology of Water, Soil and Air	(2-0)	Černáková, Fargašová
Atmospheric and Water Chemistry	(4-0)	Prousek, Lesný, Bodík
Hydrology, Meteorology and Pedology	(2-0)	Fargašová, Lesný
Laboratory Practice I.	(0-8)	Harangozó, Bodík, Fargašová, Földesová
Nuclear Chemistry and Technology II.	(2-0)	Koprda, Dillinger

8th semester (spring)

Air Protection Technology	(2-0)	Moncmanová, Ěík
Laboratory Practice II.	(0-8)	Derco, Dillinger, Ěík
Radioecology	(2-0)	Harangozó, Dillinger
Wastewater Treatment Processes	(2-2)	Derco, Drtil

9th semester (autumn)

Branch - Technology of Environment		
Risk Properties of Substances	(2-0)	Prousek, Černáková
Laboratory Practice III.	(0-10)	Drtil, Harangozó, Ěík
Liquidation and Utilization of Solid Wastes	(2-0)	Piatrik, Koprda
Environmental Technological Project	(3-0)	Drtil
Environmental Impact Assessment	(2-0)	Koprda, Piatrik
Control of Environmental Pollution	(2-0)	Lesný, Tölgessy
Special Ecology and Ecotoxicology	(2-0)	Fargašová, Prousek

Processes and Technology of Water Treatment Air Protection Technology and Air Treatment	(3-0) (3-0)	Hutòan, Bodík Éík, Prousek
10th semester (spring) Diploma Work	(0-30)	All members of the staff

B. PhD Study**1. Environmental Chemistry and Technology**

Anaerobic Wastewater Treatment Processes	Derceo, Hutòan
Progressive Methods of Wastewater Treatment	Derceo, Drtil
Psychrophilic Anaerobic Wastewater Treatment	Koprda, Bodík
Simulation of Biological Processes of Wastewater Treatment	Derceo
Utilization of Ozone for Wastewater Treatment	Derceo

2. Nuclear Chemistry and Radioecology

Penetration of Radionuclide across Skin Barriers	Koprda, Harangozó
Study of Metal Transport from Abiotic to Biotic Systems	Koprda, Lesný
Effect of Aerosol Size Fractions on Health Risk Assessment	Koprda
The Use of Fenton Reaction to Wastewater Treatment	Koprda, Prousek

IV. CURRENT RESEARCH PROJECTS**A. Progressive Methods of Water, Wastewater and Activated Sludge Treatment (Ján Derco)**

1. Utilisation of ozone for an industrial wastewater treatment (J. Derco, A. Gulyásová)

The availability of ozone treatment technology of the industrial wastewater produced by manufacture of 2-Mercaptobenzothiazole was studied. The combination of ozonation and the Fenton reaction offers an effective process for the treatment/ pre-treatment of the wastewater. Iron/hydrogen peroxide ratio has to be greater than 0,0047 in order to have a volumetric removal rate of COD about 15 times higher in comparison to dosing hydrogen peroxide alone.

2. Municipal wastewater treatment in anaerobic reactors at low temperature (I. Bodík, B. Herdová)

The low temperature influence (5-25 °C) on the municipal wastewater treatment processes under anaerobic conditions has been studied. The reduction of the reactor volume and operational costs and determination of optimum combination of anaerobic and aerobic reactors for municipal wastewater treatment plants were the aim of project. The experiments with the real wastewater on the pilot-scale reactor on the wastewater treatment plants in Bratislava were realised.

3. Sludge digestion under thermophytic aerobic conditions (M. Drtil, M. Hutòan)

Laboratory and pilot scale experiments with thermophytic aerobic sludge digestion were realised. The process was compared with other sludge digestion processes.

4. Toxicity, accumulation and interactions of metals in water and terrestrial organisms (A. Fargašová)

During the tests the attention was dedicated to the risk assessment of the chronic and acute effects, bioaccumulation and interactions of metals in pair combinations. As tested organisms were selected freshwater benthic organisms (*Tubifex tubifex*, *Chironomus plumosus*), plankton algae (*Scenedesmus quadricauda*, *Chlorella vulgaris*) and terrestrials plant (*Sinapis alba*). Interactions between metals were statistically evaluated. Comparison was done to both metal used in combinations. For algae also mathematical model for reciprocal interactions was applied. Interactions were interpreted as antagonism, synergism or additivity.

5. Anaerobic waste and wastewater treatment in high-rate reactors (M. Hutòan, M. Drtil, L. Mrafková)

Laboratory experiments with anaerobic high-rate reactors have been realised. Performance of the anaerobic baffled reactor (ABR) and process of the anaerobic sludge granulation were observed. Experiments were carried out with various types of synthetic wastewaters (containing sucrose, starch, peptone, hexamethylentetramine etc.) and the results obtained in ABR and in other type of anaerobic high-rate reactor (UASB reactor) were compared. During the reactors operation, tests of methanogenic and nonmethanogenic activity of anaerobic sludge were realised. Start-up of full scale high-rate reactor for treating of dairy wastewater was realised too. This wastewater treatment plant consists of first – acidogenic stage (volume 100 m³) and second - methanogenic stage (UASB reactor - 200 m³). Conditions for start-up and optimal reactors performance were determined.

6. Photo-Fenton reaction (J. Prousek)

Photo-Fenton reaction has been utilized for the degradation of coloured wastewaters and polyethyleneglycols solutions. Similarly, the photocatalytic degradation of coloured wastewater has been tested with the ZnO utilization as photocatalyst. Better results have been obtained by the application of photo-Fenton reaction. On the other hand, Fenton-like reaction system such as H₂O₂/HOONO/Fe²⁺ has been also tested for colour removal in model coloured wastewater. This system gives better results in relation to classical Fenton reaction (H₂O₂/Fe²⁺).

7. Investigation of the effect of selected Cu-complexes on microorganisms (M. Éeròáková)

The effect of the complexes of CuX₂L₂ (where X = CH₃CHClCOO⁻, CH₃CCl₂COO⁻ or ClCH₂COO⁻) as well as the value of L = nicotinamide (na), isonicotinamide (ina) or methyl-3-pyridylcarbamate (mpc) were studied.

8. Study of the apoptosis effect of berberine on various cellular effects (M. Éeròáková)

The effect of berberine on various cellular models was examined. It was isolated from the plant of the family Berberidaceae, genus of *Berberis*, *Mahonia*. By the interaction into DNA the berberine inhibits the system of nucleic acids and the synthesis of proteins, gives rise to apoptosis, i.e. the programmatic cell death, and exhibits the antitumoral activity. Several works have been prepared for publication.

B. Design of Novel Synthetic Routs to Heterocyclic Compounds, their Oligomers and Polymers as Models of Extended p-Systems with Metal-Complexing, Optoelectronic Properties and Bioactivity (Gabriel Éík)

The EPR spectroscopy and the measurement of AC magnetic susceptibility have been used to study of the magnetic properties of poly(3-dodecylthiophene) doped with FeCl₃. The homogenous doping (at a low level of the dopant leads to

the high degree of diamagnetism, the extent of which depends on conformational temperature changes and the amount of the dopant in a polymer. The study has shown that doping with FeCl_3 offers the possibility of achieving a high degree interacting paramagnetic polarons. The number of interacting polarons depend, among others, on conformational temperature changes on the polymer chains which disturb the homogenous dopant distribution.

C. Penetration of Ionic Species across Skin, (Vasil Koprda, Margita Harangozo, Zoltán Kassai, Andrea Pálinskásová, part of the VEGA project No. 2/6027/99 (L.Šoltés, UEF SAV)

Radionuclides ^{137}Cs , ^{60}Co , ^{90}Sr , ^{59}Fe , ^{147}Pm and other actinides belong to frequent contaminants of human body at accidental radioactive contamination. Damage of an organism after body contamination is proportional to the extent of penetrated amounts of radionuclides across the skin. Using radioactive isotopes, evaluation of kinetics of transdermal permeation of ionic species and effects of physico-chemical factors on this process were studied, and the effect of ionic charge and the concentration of ions on permeation velocity across the intact, stripped and splitted skin of biologic animal models were determined. The biologic structure mostly responsible for the barrier effect was selected and proved. The new biological models of 5 days rat abdominal skin (transepidermal) and 9 days rat skin (transfolicular) were studied and standardized for the study of transdermal permeation. Effect of Cs^+ , Sr^{2+} , Co^{2+} concentration on their permeation rate through different skin models was evaluated. The relative importance of the main diffusion pathways, across the intact skin and through the hair channels was assessed.

D.: Agricultural Reutilization of Non-Ferrous Metal Containing Waste From Microelectronic and Surface Treating Industry (INCO-COPERNICUS – METAGREC) (Gabriel Éik, Juraj Lesný, Juraj Tölgessy)

By sorption from the solution and by ion-exchange of Cu^{2+} for Na^+ and K^+ it is possible to prepare the natural clinoptilolite enriched with copper. The zeolite modified in this way "slowly" releases Cu ions into the surrounding medium. The rate of releasing of Cu can be "decelerated" by closing of Cu ions into complexes with a polythiophene as an "ecologically pure polymer" in zeolite cavities and channels. After testing the enriched zeolite with copper it has been found that the amount of the released copper into the medium depends on the mode of treating the clinoptilolite (CL). The released amount of Cu decreases in the following order: CLCu > CLCu thermally activated > CLCu-polythiophene. By testing the influence of the prepared (modified) zeolites it has been ascertained that the CLCu-polythiophene "creates" long-term conditions for the "optimum" Cu concentration in the nutrient medium necessary for the growth of maize.

The desorption study was carried out for Na-Zn-clinoptilolite using two different desorption inhibitors. The first Na-Zn-clinoptilolite modification was based on the application of polyvinylacetate. The second modification was based on the application of pyrrole. The incorporation of pyrrole (oligopyrrole, polypyrrrole) to the structure of the non acidic Na-Zn-clinoptilolite causes the creation of a coordination complex. More effective desorption inhibition was achieved by the application of PVAC.

E. The Study of Separation and Immobilisation of Radionuclides from Nuclear Power Cycle by Natural Adsorbers (Pavel Dillinger, Mária Földesová, Margita Harangozo, Oga Holá, Peter Lukáč, Milan Piatrik)

Porous materials as zeolites, were transformed into a monocation form, e.g. Na^+ , NH_4^+ , etc. by the treatment with solutions of various salts. This modification considerably extends their application, increases their effectiveness and selectivity mainly for the sorption of multivalent and hydrated cations.

Sorption capacity of chemically modified sorbents towards Zn(II) and Hg(II) cations was studied by static radioexchange and AAS methods. The dependence of structure, sorption capacity and the desorption of natural and chemically modified zeolites for individual cations on pH, temperature and competitive cations (Cs, Cd, Ca, Co, Fe) were studied on model solutions labelled by Zn^{65} and Hg^{203} radionuclides. The sorption of Hg from two chemical different solutions (dissociated and undissociated) was studied. The common influence of chemical treatment and calcination of zeolites on the sorption of Hg was studied as well. We demonstrated that the sorption capacity of natural and chemically modified zeolites depends not only on these materials but also on the chemical properties of studied solutions. The structural changes of chemically modified zeolites were studied by X-ray structural analysis, DTA, TG and ETA methods, IR spectrometry and SEM method. The leachability of cations from loaded zeolites into different types of solutions was studied by static radioexchange and AAS methods.

The results are aimed to very sensitive area of the treatment of radioactive wastes using cheap domestic materials.

The toxic effects of copper, cesium, selenium and other heavy metals on some environmental components (mushrooms, Colorado potato beetle adults) were studied by radionuclide X-ray fluorescence technique that showed to be an appropriate method for the determination of these cations in the body of insects and mushrooms.

Also the use of radon ^{222}Rn for the determination of the CO_2 exhalations from the soil was studied, as well as the treatment of dangerous wastes contained different heavy metals by chemical and physical methods. The toxicological aspects of dangerous wastes from automobile industry were studied as well.

DEPARTMENT OF FIBRES AND TEXTILE CHEMISTRY

Head of the Department:
Assoc. Prof. Anton Marciněin, PhD

Telephone: ++421-7-368 598
Fax: ++421-7-393 198
E-mail: tmarcin@chtf.stuba.sk

I. STAFF

Full Professor:
Eberhard Borsig, DSc;

Associate Professors:
Pavol Hodul, PhD; Krištofič Michal, PhD; Anton Marciněin, PhD;

Assistant Professors:
Jaroslav Legéò, PhD; Anna Ujhelyiová, PhD;

Research Fellows:
Marcela Hricová; Anna Murárová, PhD; Elena Zemanová, PhD;

PhD Students:
Eva Körmendyová; Zita Mlynaréiková; Silvia Pavlíková;

Technical Staff:
Alžbeta Ferenéáková; Gabriel Kužel; Albína Pokorná; Edita Štábelová;

II. TEACHING AND RESEARCH LABORATORIES

A.Teaching Laboratories:

Laboratory of Macromolecular Chemistry

Laboratory of Computer Modeling of Structure and Properties of Polymers

Laboratory of Textile Auxiliaries

Laboratory of Polymer Fiber and Fibrous Material Structure

DSC, TMA, SALS, Zeta Potential, Surface Properties

Laboratory of Fiber Technology

Laboratory of Textile Chemistry, Bleaching, Dyeing and Finishing

Laboratory of Fiber and Textile Testing

Laboratory for fibre spinning, drawing and texturing, extruders 16 and 30 mm

Laboratory for dyeing and finishing of fibres and textile materials (Ahiba, Pretema, Multicolor)

B.Research Laboratories:

DSC-Perkin Elmer and DTA (Derivatograph Q 1500 D)

TMA-50 M and TA (Thermomechanical measurement)

Gas Chromatography CHROM-5

Instron, model 1112 and Uster for Mechanical Properties

Dynamic Viscoelastomer model Rheo-200

Alambeta for Measurement of Thermo - Properties of Textiles

Integral electrometer Polystat PS-1

Capillary viscosimeter

Computers PC-AT and XT

Unimode semiconductive Laser 25mW 690nm with universal optical set

Microscope Olympus Model BHT

Laboratory equipments for light degradation of fibrous materials Xenotest

III. TEACHING

A. Undergraduate Study

5th Semester (autumn)

Macromolecular Chemistry	(2-0 h)	Borsig
--------------------------	---------	--------

6th Semester (spring)

Material Technology	(2-0 h)	Marciněin
Cosmetic and indoor chemistry	(2-0 h)	Hodul

7th Semester (autumn)

Macromolecular Chemistry II	(2-1 h)	Borsig
Physics of Polymers and Paper	(2-2 h)	Krištofič
Fiber Sci. and Technology	(3-0 h)	Marciněin
Seminary Fiber Sci. and Technology	(0-2 h)	Marciněin
Structure of Fibrous Materials	(2-1 h)	Ujhelyiová
Modeling of Polymer Structure and Properties	(2-1 h)	Rýchly
Laboratory of Fiber Sci. and Technology	(0-0-8)	Krištofič, Legéò

8th Semester (spring)

Coloristics and Textile Auxiliaries	(2-0 h)	Hodul
Fibrous Composites	(2-0 h)	Krištofiè
Textile Engineering	(2-0 h)	Ujhelyiová, Murárová
Seminary Textile Engineering	(0-2 h)	Ujhelyiová, Murárová
Laboratory II.	(0-0-10)	Legeò, Hodul
Excursion and Technical Experience		Marcinèin, Demianová

9th Semester (autumn)

Textile Chemistry and Technology	(3-1 h)	Hodul
Technology of Polym. Films	(2-0 h)	Marzinèin
Laboratory of Textile Chemistry and Technology	(0-0-10)	Hodul
Fiber and Textile Testing	(2-0 h)	Legéò

10th Semester (spring)

Seminary	(0-3-0)	Hodul
Diploma work	(0-0-27)	

B. PhD study:

Physics of Polymers
 Macromolecular Chemistry
 Technology of Polymeric Materials
 Organic Chemistry
 Physical Chemistry

C. An advanced course for Rhodia company employees

Macromolecular chemistry	(20 h)	Borsig, Krištofiè
Fiber Science and Technology	(30 h)	Marzinèin
Structure and Properties of Fibres	(20 h)	Ujhelyiová
Fibre Testing	(20 h)	Legéò

D. Seminars

Dispergation mechanism in polymer blends.	(Fortelný I., Macromolecular Institute ÈAV, Czech Republik)
Hierarchy structure of polymers and mechanical properties.	(Raab M., Macromolecular Institute ÈAV Czech Republik)
Technology in Search of markets: Airlaid nonwovens for a new millenium. Jet ink printing.	(Pivko I. B., Notabene Associates Inc., USA) (Hodul P., ChTFf, STU Slovakia)

IV. CURRENT RESEARCH PROJECTS**Fiber-forming polypropylene blends with polar polymers (Eberhard Borsig)**

The aim of the project is a solution of miscibility of polypropylene PP with polar polymers (PA, PET) and also with other additives with respect to achieve a spinning of these blends. A polymer blend consisting of PP, branched PE and PET was studied by the DSC method. If PE was present in the blend in a minority amount an increase of amorphous phase and on the contrary an increase of crystallinity position in PP component were observed. The results showed that a partial miscibility of PP and LDPE over melting point was observed. On the other hand an decrease of PET crystallinity portion, which forms a disperse phase, was observed it is proportional to its amount in the blend. These morphological changes influence the sorption of dispersion dyes of the blend fibers.

V. COOPERATION**A. Cooperation in Slovakia:**

Research Institute for Man-Made Fibres, Svit
 Research Institute of Textile Chemistry, Žilina
 Polymer Institute, Slovak Academy of Sciences, Bratislava
 Slovenský hodváb a.s., Senica
 Chemosvit a.s., Svit
 Rhodia a.s., Humenné
 Merina a.s., Trenèín

IV CURRENT RESEARCH PROJECTS

A. The study of relations between physical and chemical properties of the constituents and structures of printed images and image information quality in graphic arts technologies for planar polymer

materials (Michal Èeppan)

1. Study of physical and chemical properties of macromolecular systems in constituents and structure of colour images on planar polymer materials. Characterization of optical properties of multiplayer structures of images by methods of objective microphotometry, spectrophotometry and colorimetry.

2. Study of influence of surface and rheological parameters of macromolecular systems of printing inks on the course of their transfer on planar polymer materials in the process of printed image formation.

3. Study of photochemical reactions of selected photopolymerization systems and their relation to the stability and quality of printed images.

B. Coating thickness measurement of non-visible fluorescent UV colors (Contract with KASICO, a.s., printing house, Milan Mikula)

The effective layer thickness of a fluorescent UV sensitive color is not easy to control during a printing process. Classical densitometry cannot be applied because the fluorescent UV colors are non-visible. The problem was solved studying the fluorescent properties of the UV colors, their excitation and emission spectra. The prototype of a simple manual measuring system for technological application has been built up, based on appropriate excitation light source, detector, and applying the proper filtration of light. The prototype is now experimentally tested in the printing house.

Laboratory of Photochemistry

Laboratory of Magnetochemistry

Laboratory of Thermal Processing

Laboratory of Spectroscopy

Laboratory of X-ray Analysis

Laboratory of Powder Diffraction

III. TEACHING

A. Undergraduate Study

1st Semester (autumn)

Inorganic Chemistry I

(3-2 h)

R. Boèa, Kotoèová, Melník, Šima, Valigura

Inorganic Chemistry I (Laboratory)

(3 h)

Baloghová, M. Boèa, Broškovièová, Dlháò, Dunaj-Jurèo, Gembický, Hvastijová, Izakoviè, Jorík, Macášková, Makáòová, Mašlejová, Mikloš, Monco, Ondrejkovièová, Palicová, Papáñková, Rùžièka, Segel, Sirota, Sýkora, Tatarko, Vanèová, Vrbová

2nd Semester (spring)

Inorganic Chemistry II

(2-2 h)

Hvastijová, Koman, Melník, Ondrejoviè, Sýkora Baloghová, M. Boèa, Broškovièová, Dlháò, Gembický, Izakoviè, Jorík, Macášková, Makáòová, Mašlejová, Mikloš, Ondrejkovièová, Palicová, Papáñková, Rùžièka, Segel, Sirota, Sýkora, Tatarko, Vanèová, Vrbová

7th Semester (autumn)

Chemical Bond and Chemical Structure

(2-0 h)

R. Boèa

Chemistry of Coordination and Organometallic

Compounds

(2-0 h)

Ondrejoviè

Inorganic Photochemistry

(2-0 h)

Sýkora

Inorganic Syntheses

(2-0 h)

Valigura

Laboratory Practice in the Major I

(0-10 h)

R. Boèa, Kotoèová, Ondrejkovièová, Ondrejoviè, Rùžièka, Segel, Sýkora, Valigura

8th Semester (spring)

Bioinorganic Chemistry	(2-1 h)	Melník
Crystalllochemistry	(2-0 h)	Dunaj-Jurèo
Indirect Methods of Research Structural Studies of Inorganic Compounds	(2-2 h)	Mašlejová
Inorganic Materials	(2-0 h)	Koman
Laboratory of Speciality	(6 h)	
Laboratory Practice in the Major II	(0-6 h)	Jorík, Mašlejová, Mikloš
Reaction mechanisms of Inorganic Compounds	(2-0 h)	Šima
Spectral Methods of Control Technological Processes	(2-2 h)	Segal
Technics of a Mixture Separation	(2-2 h)	Valigura

9th Semester (autumn)

Bioinorganic Chemistry	(2-1 h)	Melník
Catalysis	(2-0 h)	Ondrejkovièová
Chemistry of Coordination and Organometallic Compounds	(2 h)	Ondrejkoviè
Inorganic Materials	(2-1 h)	Koman
Laboratory of Speciality	(10 h)	Mikloš, Koman, Mašlejová, Ondrejkovièová, Rùžíèka, Šima, Valigura, Papáneková

B. PhD Study**1st Semester**

Structure of Inorganic Substances	(30 h)	R. Boèa, Ondrejkoviè
Recent Coordination Chemistry*	(30 h)	supervisors

2nd Semester

Reaction Mechanisms of Inorganic Compounds	(30 h)	Šima
Recent Coordination Chemistry*	(30 h)	supervisors

* Studied and controlled individually in correspondence with the doctoral thesis.

IV. CURRENT RESEARCH PROJECTS**A. Preparation, structure, reactivity and properties of inorganic and coordination compounds and their applications (Milan Melník)**

A number of new Cu(II), Mg(II), Fe(II) and Fe(III) complexes with anions of the N-heterocyclic acids derivatives (antiphlogistic drugs) have been prepared and studied by thermal, spectral and magnetic methods, and some by X-ray analysis. All the compounds have been tested to examine their antimicrobial, antifungal and antiyeast effect. Some of the compounds have been accepted for a higher degree of testing.

Some relationships between the spectral and magnetic properties of the respective compounds and their stereochemistry was found and discussed. A database covering the bioactivity of copper, iron and magnesium complexes, has been created. The structure of thousands copper and iron complexes has been classified and analyzed. As a result the conclusions for synthesis of the complexes with a desired structural type have been formulated.

For design of new materials can be also applied some of the results concerning the synthesized clusters, coordination polymers, and 1D-, 2D- and 3D-multipolymeric copper(II) complexes, including the modeling formulas which originally characterize their composition of structure.

It was found that cuprous-cupric photoredox cycle is effective in photodestruction of some pollutants in water. The results on photoredox properties of iron(III) complexes can be used for optimization of rate constants describing the excited state redox quenching of the complexes based on electrode potentials of the quenchers in the ground state. For copper(II) complexes the thermodynamic and stereochemical conditions for the redox tuning of copper(II) have been found and formulated.

Continuing in investigation of photoreactivity parameters optimization, the wavelength dependences of quantum yields have been studied. It was been found that three kinds of such dependences exist and conditions for their origin are rationalized. Reasons leading to similarities and differences in electrochemical and photochemical electron transfer processes have been identified.

The central atom effect on in-coordination sphere transformation of various N-donor ligands has been observed and general conclusions allowing to prepare in a selective way of amines and oxazolines have been formulated.

B. Induced transformations in coordination compounds (Roman Boèa)

1. The conditions leading to the spin crossover in solids (the low-spin to high-spin state transition) have been determined. New iron(II) complexes based on the tridentate N-donor heterocyclic ligands were prepared and investigated: they show the spin transition above the room temperature and some of them posses a considerable hysteresis (the heating and the cooling regimes behave differently).

2. New data in the chemistry of non-linear pseudohalides have been obtained. In addition to usual complexes, new products of a nucleophilic addition initialized by the beta-carbon activation have been prepared. Some of them show interesting stereochemical properties (imidazolidine ring opening/closing).

3. An experimental X-ray determination of the electron density distribution in metal complexes has been progressed.

C. Development and applications of methods for picking out of talented students in small as well as in larger groups with respect to the needs of the Chemical Faculty of the Slovak Technical University (Anton Sirota)

1. A new version of a didactic creativity test in physical chemistry was tested in smaller groups of students. The test was proved to be sensitive and reliable enough for picking out talented students in higher courses of the Chemical Faculty.

2. The research team was appointed to elaborate new statute of the special club named "SOCRATES" that gathers teachers and talented students of the Chemical Faculty. When creating the club, the methods for picking out talented students proposed by the research team, were applied and those experience and methods were used which have proved to be successful at the secondary school level.

3. Some members of the research team prepared special examination and teaching texts and held lectures for students of the Summer School in Chemistry organized for talented secondary school students in July 2000. Moreover, several of them were involved into special training of the students who represented Slovakia at the 32nd International Chemistry Olympiad in July 2000 in Copenhagen and achieved the 5th place in the competition from among 52 countries of all over the world.

4. Results of the research team were gathered in 22 reviewed papers (in Slovak) and published in journals while 4 papers were published in special booklets devoted to chemistry olympiad in Slovakia.

V. COOPERATION

A. Cooperation in Slovakia:

Department of Physical Chemistry, Slovak Technical University, Bratislava
 Department of Organic Chemistry, Slovak Technical University, Bratislava
 Department of Chemical Physics, Slovak Technical University, Bratislava
 Department of Inorganic Technology, Slovak Technical University, Bratislava
 Department of Microbiology, Biochemistry and Biology, Slovak Technical University, Bratislava
 Department of Ceramics, Glass and Cement, Slovak Technical University, Bratislava
 Institute of Medical Chemistry, Medical Faculty, Komensky University, Bratislava
 Institute of Inorganic Chemistry, Slovak Academy of Science, Bratislava
 Institute of Rheumatic Diseases, Piešťany
 Department of Inorganic Chemistry, Faculty of Science UPJŠ, Košice

B. International Cooperation:

Technical University, Vienna, Austria
 - Magnetic properties in solids and solutions
 York University, Toronto, Canada
 - X-ray analysis of transitions and non-transitions metal atoms
 University of Helsinki, Finland
 - X-ray analysis of solid compounds
 University of Joensuu, Finland
 - X-ray analysis of copper(II) compounds
 Martin-Luther University, Halle-Wittenberg, Germany
 - Structure and physical properties of transition metal complexis with non-linear pseudohalides
 Technical University, Darmstadt, Germany
 - New magnetic materials
 University of Wroclaw, Poland
 - Magnetic and x-ray analysis

C. Membership in Domestic Organizations and Societies:

Slovak Chemical Society
 Czech and Slovak Society for Crystal Growth
 Czech and Slovak Crystallographic Association
 Regional Committee of Czech and Slovak Crystallographers
 Crystallographic Society
 EPA Slovakia National Group

D. Membership in International Organizations and Societies:

Czech and Slovak Crystallographic Association, Prague, Czech Republic	(Dunaj-Jurèo, Jorík, Koman, Kožíšek, Mikloš)
Member of International Union of Crystallography, IUCr	(M.Dunaj-Jurèo)
Member of European Crystallographic Committee, EEC	(M.Dunaj-Jurèo)
American Chemical Society, USA	(M.Melník, J.Sýkora)
European Photochemistry Association, Switzerland	(J.Sýkora, M. Izakoviè, M. Tatarko)
Member of EPA Standing Committee, Switzerland	(J.Sýkora)
EPA Local Treasurer, Switzerland	(J.Sýkora)
Finland Chemical Society	(M.Melník)
Member of MGMC Editorial Board, Brusel	(M.Melník)
International Information Center of International Chemistry Olympiads	(A.Sirota)

E. Tempus Programme:

F. International Scientific Programmes:

Scientific & Technological Cooperation Between Germany (TU Darmstadt) and Slovakia (STU Bratislava): New magnetic materials - R. Boèa, H. Fuess

Scientific Cooperation Between Germany (MLU Halle) and Slovakia (STU Bratislava): Untersuchungen zur Struktur und Reaktivität von Übergangsmetallkomplexen nichtlinearer Pseudohalogenide - M. Hvastijová, L. Jäger
 Scientific Cooperation Between Poland (Wroclaw University) and Slovakia (STU Bratislava) ESF Project: Molecular Magnets.- R. Boèa, M. Verdaguer, M. Melník, J. Mrozinski

G. Visitors from Abroad:

Dr. I. Svoboda	Technical University, Darmstadt, Germany, June 2000 (4 days)

IV. CURRENT RESEARCH PROJECTS

A. Thermodynamics and Kinetics of the Processes on the Phase Boundary Aluminium – Melt. (Pavel Fellner)

Aluminium is produced by the electrolysis of alumina dissolved in cryolite based melts. Under the electrolysis the content of sodium (and lithium) increases with increasing cathodic current density. This effect is related with the concentration cathodic overvoltage. We investigated the correlation between composition of the aluminium cathode (Al-Na-Li) and the cathodic overvoltage in the molten system NaF-AlF₃-LiF-Al₂O₃. The cathodic overvoltage was measured using the interruption technique. Both the concentration of sodium and lithium in aluminium and the cathodic overvoltage were investigated in a broad range of compositions, temperatures and current densities. Increasing concentration of AlF₃ results in an increase of the cathodic overvoltage while the addition of LiF decreases it. The theoretical relationship describing this correlation has been developed.

B. Preparation and Properties of Oxide Layers on Aluminium. (Marta Chovancová)

Composite oxide layers on aluminium substrate were prepared by anodic oxidation in acidic electrolyte and a layer of organic or inorganic materials. Their corrosion, optical and dielectric properties were studied. The influence of pretreatment operation of aluminium substrate was investigated as well. The growth of oxide layers were studied under galvanostatic regime. The morphology of prepared oxide layers were studied by advanced scanning microscopy.

II. TEACHING AND RESEARCH LABORATORIES

English language classroom

German language classroom

Computer-operated Data Video Projector Room

III. TEACHING

A. Undergraduate Study

The English language represents a compulsory subject for each student of this faculty. In special cases, if a student has a better knowledge of a different world language, he may ask the dean to be given permission to take up one of the following languages: German, French, Spanish, Russian or Italian. A prerequisite of the latter case is the intermediate level in the chosen language. The programme is taught in two semesters in the first year of the study and ended with a 4-credit exam. The objective of the language study is not to teach the general language, but the language for specific – prospective professional purposes. It means the participants will be able to use the language in the study of their specialist area literature, to further develop all the language skills actively with the aim of mastering extensive reading and listening to texts, academic writing, poster and conference skills, etc. In the final exam students are expected to prepare a poster, present and support it with arguments in a discussion. The long-term aim is to finally enable all faculty graduates to present - at least - the essential part of their thesis in the state exams also in a foreign language.

In case of a student who does not speak any of the above languages, he may take up an elementary course in English first, and then study the compulsory technical language in the second, or possibly the third year of the study.

The students who have chosen a different language than English in the first year, will have to pursue English in three more terms after passing the exam in their first foreign language.

Foreign students have a 2-term course of the Slovak language.

Besides the above - mentioned compulsory courses there is a wide range of recommended subjects offered, such as English conversation, preparatory courses for beginners, remedial courses of various levels, German, Russian and so on, according to the interest of students in the current year; these are also available to SUT employees.

B. Postgraduate Study

Postgraduate students are offered optional seminars for technical English (2-4 hours per week) in which they are taught academic skills, such as presentation techniques, writing reports, abstracts, summaries, solving case studies, etc. Postgraduates are obliged to pass an examination in which they defend their scientific work results, prove their communication, discussion and other academic skills in English. The subject is taught by Alžbeta Oreská, Veronika Polóniová, PhDr. and Magdaléna Horáková

IV. CURRENT RESEARCH PROJECTS

A. Aspects of Teaching a Foreign Language for Specific Purposes at the University of Technology

(Milan Kozlík, PhD)

The objective is to develop high quality course programmes tailored to the needs of our students.

Current results are:

- collection of new or adapted texts
- exploitation of our own reading materials from the department's material bank
- devising new, more challenging tasks for the newly acquired materials
- unit design
- discussion and evaluation of the newly adopted units
- implementing new forms of active and independent learning (e.g. Critical thinking in reading and writing in ESP)
- introduction of "Effective Presentation" and "Socializing" video programmes into teaching successful poster presentations for undergraduate and postgraduate students
- presenting more challenging topics from science and technology in the annual faculty competition "Student Research Activities"

- further continual teaching staff development in methodology and informatics.

V. COOPERATION

A. Cooperation in Slovakia:

(1) Language departments within the Slovak University of Technology, Bratislava, and those of the Technical University, Košice:

- joint project of preparing syllabuses for language state exam courses administered by SUT language departments which will - besides the general language- introduce also the area of scientific English;
- (2) Cooperation with IASTE: oral interviews with applicants for mobility abroad (A. Oreská, V. Polóniová)
- (3) Language section of the annual "ŠVOÈ" (Students' Scientific and Research Activity) competition (16 May 2000)
- (4) Evaluation of the Germaniac project (Kuželová, Trnava, 6 – 7 September 2000)
- (5) Workshop "Integrating Skills in ESP (Horáková, Štefanovièová, one-week British Council course, January 2000)

B. International Cooperation:

- (1) International seminar – presentation of the Germaniac project (Kuželová, Trnava, 22 May 2000)
- (2) International conference – dissemination of the new curriculum of German at tertiary level (Kuželová, Warsaw, 25 – 26 May 2000)
- (3) Workshop on the new curriculum of the German language (Kuželová, Germany, 21 July – 1 August 2000)

C. Membership in Domestic Organizations and Societies:

Slovak Association of Teachers of English, Bratislava (A. Oreská, Z. Štefanovièová, M. Horáková)
Slovak Association of Translators and Interpreters, Bratislava (V. Polóniová)

D. Membership in International Organizations and Societies:

British Council - Resource Centre, Bratislava (A. Oreská, M. Horáková, V. Polóniová)

F. International Scientific Programmes:

(1) A New Curriculum for Teaching German at Tertiary Level (Viera Kuželová, PhD, May 1997 – January 2000)

Project promoters: University Constanze in Germany, Goethe Institutes in Bratislava, Prague, Warsaw and Nancy (France)

The aim of the project is to design a curriculum enabling a certain unification and compatibility of the foreign language tuition in the EU while meeting specific needs of different faculties. It will further promote students' mobility as well as a concept of a multilingual Europe.

Currently the curriculum is in the piloting and monitoring stage at several chosen universities with the aim to create more effective teaching materials corresponding with students' real-life and professional needs.

(2) GERMANIAC – German Modular and Integrated Accredited Courses for Engineers 2642-MG2-1-96-1-BE-ERASMUS-EILC “ (Viera Kuželová, CSc., team member, 1 July 1999 – 30 June 2000)

The aim of this Socrates international project is to disseminate the designed course of technical German within the countries of the EU as well as in associated countries.

Current results are:

- modular course design specialized in mechanical engineering, electronics and chemistry
- information web-site and on-line courses (<http://intra.mtf.stuba.sk/Germaniac/index.htm>)
- translation of related vocabulary (chemistry – Kuželová)

IV. CURRENT RESEARCH PROJECTS

Research activity of the Department of Management was directed at "Modern conceptions of the basic orientation of the firm's strategic management.

A. Conception of the firm's strategic management (Ján Šimkovic)

Project participants: Gabriel Karas, Pavel Herzka, Dušan Hesek

The outputs of this part of research involve the knowledge:

- gained by the analysis of the basic goal of strategic planning explicitly oriented to market strategy determined by the firm's potential sources and competence,
- required for inevitable changes proceeding in our conditions in the environmental policy of the chemical and food-processing companies and for a support to the company management considering future potential environmental damages; applied also to basic strategic management conceptions integrated into the whole firm's system.

The first part of the work is devoted to determinants of the modern conceptions of the strategic restructuralization in large-scale companies. The closer attention is paid to objectives, organizational questions and to technocratic as well as procedural means of the management of the above-indicated companies.

In the second part, a range of problems concerned with a general updating of the project-oriented activities in large-scale companies is solved. They make the knowledge related to the project management accessible.

The third part contains the personal management knowledge relevant from the aspect of increasing the company culture in decision-making processes on exploiting the divisional, project-oriented organization.

In the fourth part, the knowledge associated with introducing of up-to-date information-communication technics into the strategic decision-making system in large-scale companies is developed. It elucidates the new data summarized under the term "Management information system" (MIS). The basic goal of information technologies is the support to an entrepreneurial sphere on achieving competitive advantages. For this reason their introduction implemented on the basis of the strategic plan in accord with the entrepreneurial strategy is necessary.

B. Philosophical-social aspects of macroeconomic theories, the environmental, ethical and legal dimensions of engineering-technological and economic activities with regard to their specificities in the chemical and food-processing industry (Dušan Špirko)

Project participants: Štefan György, Peter Velicky

In accordance with scientific objectives a factual keystone of the first-stage research work was the analysis of terms "nature and culture" as basic concepts of the environmental philosophy and ethics, and the investigation of the genesis, changes and development of ideas about the relationship between man and nature in the European cultural tradition (in this part it is the period of antiquity and Middle Ages), which is important to perceive the environmental crisis as a crisis of values. Furthermore, the research work was aimed at some ethical aspects of business and legal relationships, the question of enhancing the legal conscience as an inevitable assumption of environmental humanization and at the analysis of the term "technics". The analysis of results and opinions on the social and environmental aspects of macroeconomic theories will continue at the next stage of research.

The final knowledge suggests a positive contribution of the effort spared within the basic project orientation to: the research development from the aspect of the philosophical-social analysis of macroeconomic theories, principles of the environmental and entrepreneurial ethics, ethical aspects of engineering-technological activities, and to the further specification of the legal aspects of engineering-technological and economic-entrepreneurial activities with regard to their specificities in the field of the chemical and food-processing industry.

In particular, the following range of problems was solved:

1. Analysis of results and opinions on the social-economic aspects of macroeconomic theories.
2. Analysis of terms "nature and culture" as basic structural concepts of the environmental philosophy and ethics; the genesis and development of ideas about the relationship between nature and culture in the European tradition.
3. Analysis of specificities of the commercial and financial law in the sphere of the chemical and food-processing industry in Slovakia.

DEPARTMENT OF MATHEMATICS

Head of Department:

Prof. Vladimír Kvasnička, PhD, DSc

Telephone: ++421 7 52495177

Fax: ++421 7 52493198

E-mail: kvasnic@cvt.stuba.sk

I. STAFF

Full Professors:

Vladimír Kvasnička, PhD, DSc

Associate Professors:

Imrich Fabrici, PhD, Anna Kolesárová, PhD, Jiří Pospíchal, PhD, Michal Šabo, PhD, Štefan Varga, PhD

Assistant Professors:

Jozef Antoni, PhD, Vladimír Baláž, PhD, Július Bánki, PhD, Štefan Boor, M.Sc., Ivan Garaj, PhD, Viera Grusková, PhD, Eva Hainzlová, M.Sc., Vladimír Haluška, PhD, Ľubomíra Horanská, M.Sc., Milan Jasem, PhD, Eva Rovderová, PhD, Soňa Sladká, M.Sc.

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories:

Laboratory equipped by personal computers for the Basics of Computer Science

III. TEACHING

A. Undergraduate study

1st semester (autumn)

Calculus I.	(3-3 h)	Baláž, Fabrici, Grusková, Jasem, Kolesárová, Kvasnička, Šabo
Basics of Computer Science	(1-2 h)	Antoni, Bánki, Hainzlová, Pospíchal

2nd semester (spring)

Calculus II.	(4-4 h)	Baláž, Fabrici, Grusková, Jasem, Kolesárová, Kvasnička, Šabo
--------------	---------	--

7th semester (autumn)

Calculus III.	(2-2 h)	Antoni, Garaj, Varga
---------------	---------	----------------------

B. PhD Study

1st semester (autumn)

Optimisation Methods	(2 h)	Kvasnička
----------------------	-------	-----------

2nd Semester (spring)

Advanced Mathematical Statistics	(2 h)	Varga
----------------------------------	-------	-------

C. Extracurricular lectures

Evolutionary Algorithms	(2-0 h)	Kvasnička, Pospíchal (see web address http://math.ctf.stuba.sk/evol/prednaska.htm , this lecture is presented for computer-science students of Faculty of Mathematics and Physics, Comenius University)
Introduction to Cognitive Sciences	(2-0)	Kvasnička, Pospíchal (see web address http://math.ctf.stuba.sk/kog_vedy.htm , this lecture is presented for students of Comenius University)
Theory of Fuzzy Systems	(3-1 h)	Kolesárová (this lecture is presented for computer-science students of Faculty of Electrical Engineering and Computer Technology)

IV. CURRENT RESEARCH PROJECTS

A. Artificial neural networks (supervised by Vladimír Kvasnička).

The core of the project is the study of artificial neural networks, which are able to accept directly a structural information represented by acyclic rooted graphs. Such a generalization of neural networks is very important not only for chemical application of neural networks, where structural formulas are used as an input of molecules, but also for computer science in general, where the processing of a structural information belongs to its basic problems. An architecture of a neural network will be divided into two parts. In the first part the structural formula will be directly numerically processed, and the output will serve as an input for a standard neural network. The adaptation process, which optimizes the

parameters of the neural network to achieve such an output of the neural network, that would be as close as possible to the required output, is applied to both parts of the neural network. The method will be tested for various classes of molecular properties and structural formulas. Our further activities are concentrated on an application of recurrent neural networks as cognitive devices for multi agent simulation calculations of an emergence of coordinated communication between agents. It was demonstrated, that if an analogue of Dawkins' memes is used, then a coordinated communication spontaneously emerges. On the other hand, if Dawkins' memes are ignored, then an emergence of coordinated communication between agents does not emerge.

B. Evolutionary algorithms (supervised by Jiá Pospíchal)

This project is concentrated on a development of various evolutionary optimisation algorithms (genetic algorithms, simulated annealing, evolution strategies and tabu search) and their applications for solution of combinatorial NP-complete problems, graph theory problems and for adaptation of neural networks, as well as for optimisation of highly multimodal and deceptive functions. Theoretical study of fuzzy systems and implementation of a learning procedure of fuzzy neural networks by evolutionary algorithms. Artificial life studies are performed by making use of evolutionary algorithms as simulators of Darwinian evolution. An emergence of cooperation and altruism in multiagent systems is simulated.

C. Theory of fuzzy systems (supervised by Anna Kolesárová and Michal Šabo).

The main goals of this project are the modeling of vagueness and the inference process from imprecise or vague premises. These topics are very important for knowledge-based systems, especially for fuzzy expert systems and the aggregation of vague data. In the area of approximate reasoning there are studied various types of inference rules dealing with the problem of deduction of conclusions in an imprecise setting. Namely, a compositional rule of inference based on various types of triangular norms (or other approximate operators) is studied. The methods which effectively simplify the computational complexity of an inference process are investigated. Since the aggregation of input data into a single output is a background of many theoretical and practical problems, we study various types of aggregation operators that can be successfully used in many valued logic, in the theory of approximate reasoning and decision making. Main attention is paid to the aggregation operators based on triangular norms to the construction methods of new aggregations operators and to the conditional aggregation of data.

D. Estimations of unknown parameters in statistical models of direct and indirect measurements (supervised by Štefan Varga).

Our specific field of interest has been estimations and predictions in regression models. Special regression models are models with unknown variance and covariance components called mixed regression models. Estimability and different types of estimations of these components and their applications are topics of our publishing activities.

E. Periodic weekly seminar on fuzzy sets and fuzzy logic (supervised by Michal Šabo)

Organised for staff of Department of Mathematics and students of our Faculty.

F. Periodic yearly workshop on cognitive science (supervised by Vladimír Kvasnièka and Jiá Pospíchal).

An interdisciplinary approach to artificial intelligence, neuroscience and cognitive science, sponsored by Open Society Foundation.

V. COOPERATION

A. Cooperation in Slovakia:

Department of Mathematics and Descriptive Geometry, Faculty of Civil Engineering, Slovak Technical University, Bratislava

Department of Computer Science and Engineering, Faculty of Engineering and Information Technology, Slovak Technical University, Bratislava

Department of Cybernetics and Artificial Intelligence, Technical University of Košice

B. International Cooperation:

Department of Mathematics, University of Bayreuth

Institute of Mathematics, Johannes Kepler University, LINZ, AUSTRIA

Computer Chemistry Laboratory, Masaryk University, Brno, Czech Republic

Department of Organic Chemistry, University of Pardubice, Czech Republic

Faculty of Informatics, Masaryk University, Brno, Czech Republic

C. Membership in Domestic Organisations and Societies

Slovak Academic Society (Kvasnièka)

Slovak Artificial Intelligence Society

Slovak Society of Mathematicians and Physicists

Slovak Chemical Society

Slovak Society of Chemical Engineers

Slovak Computer Science Society

Slovak Mathematical Society

D. Membership in International Organisations and Societies

WATOC - World Association of Theoretical Organic Chemists

International Society of Theoretical Chemical Physics

American Mathematical Society

European Mathematical Society

The EURO Working Group on Fuzzy Sets

European Society for Fuzzy Logic and Technology

G. Visitors from Abroad

H. Visits of Staff Members to Foreign Institutions

- A. Kolesárová, Université P. et M. Curie, LIP6 (1 week)
- A. Kolesárová, Johannes Kepler Universität, Linz, Austria (1 month)
- M. Šabo and Š. Varga, Workshop : Partial knowledge and uncertainty : Independence, conditioning, inference. Rome, Italy (1 week)
- J. Pospíchal, Lecture at University of Teesside, Royal Society meeting 'Applications of AI in the Sciences', Middlesbrough, UK (1 week)
- V. Kvasnička and Š. Boor, Conference Mendel '2000, Brno, Czech Republic (5 days)

B. PhD Study**IV. CURRENT RESEARCH PROJECTS****A. Rapid, specific detection of Listeria monocytogenes by antibody-based techniques and on line sensor technology; development of improved control of food safety for industry and the consumer (Katarína Horáková)**

Food as a vehicle of infection for Listeria monocytogenes was not recognised until 1980s. Prior to this the disease, which can cause central nervous system infection and septicemia, was either from an unknown source or was known to be transmitted direct from an animal reservoir or via hospital cross-infection. At particular risk are compromised individuals such as pregnant women and those with underlying disease. The overall objective of the project is to develop rapid, specific test methods for the detection of Listeria in foods, with the aim of introducing appropriate quality control into food production processes of the CCE partners. The method will be used both to assess the quality of raw material and the final food product, including where possible on line sensor technology. Partial objectives: to raise novel antibodies; optimise the laboratory technology; validation of the method; to introduce the method for routine detection; to disseminate the results.

Improving of the functional and biological values of foods and cosmetic products.

B. Stabilisation of foods containing fats by application of new types of natural antioxidants (Štefan Schmidt)

Most of the studies during this period have focused on further testing of antioxidant activity of extracts from rosemary and evening primrose seeds.

C. Improvement of nutrition and sensory quality of foods via optimising of physico-chemical and biological factors (Vladimír Frank)

The project analyses factors, which affect the selected technically relevant microorganisms, i.e. those microbes causing fermentation, spoiling and/or health risks of foods. Application of isolation and separation methods for determination of volatile compounds in investigated foods and sensory profiling of flavour alterations initiated by chemical and microbial changes of food are under intensive search as well. Other branch of project deals with improvement of technical properties of fats via randomization process, which concurrently saves the biological value of fat products considering, that essential fatty acids content remains unchanged after the process.

V. COOPERATION**A. Cooperation in Slovakia**

Central Laboratory Milex - Progres, a.s., Bratislava
Dairy Plant Levice
De MICLÉN, a.s., Levice
Dimenzia, s.r.o., Kežmarok
Institute of Dairy Research, Žilina
Institute of Human Nutrition, Bratislava
Institute of Preventive and Clinical Medicine, Bratislava
Milex, Nové Mesto nad Váhom
Nuclear Powerplant Jaslovské Bohunice
Palma - Henkel, a.s., Nové Mesto nad Váhom
Palma - Tumys, a.s., Bratislava
PHARMASUN, Bratislava
Rajo, a.s. Bratislava
Ress, s.r.o., Senica
Slovak Academy of Sciences, Institute of Chemistry, Bratislava
Slovak Academy of Sciences, Institute of Molecular Biology, Bratislava
Slovak Academy of Sciences, Institute of Pharmacology, Bratislava
Slovak Agricultural University, Nitra
Natural Institute of Health, Bratislava

B. International Cooperation:

(pozn.: uviesť názov organizácie, miesto, štát, stručný názov, resp. oblasť spolupráce)

Aluso sro, Prague, Czech Republic
- development of cosmetic products
BBSRC Institute of Food Research, Norwich, Great Britain
- detection of Listeria monocytogenes
BRDC (Biotechnology Research and Development Corporation) Peoria, IL, USA
- Enzymatic modification of natural polymers
Dublin City University, Biomedical and Environmental Sensor Technology Centre
- Development of improved control of food safety for industry
Faculty of Food Technology and Biochemistry, Institute of Food Chemistry and Analysis, Prague, Czech Republic
- Dairy education
- Natural antioxidants

- Development of improved control of food safety for industry
Gimex, sro, Zlín, Czech Republic
- Household Chemistry
Milcom-Dairy Research Institute, Prague
- Development of improved control of food safety for industry
NCAUR (National Center for Agricultural Utilization Research), ARS, USDA, Peoria, IL, USA
- Enzymatic modification of natural polymers
Technical University Vienna, Department of Biotechnology, Austria
- Proteolytic Enzymes of *Brevibacterium linens*

C. Membership in Domestic Organizations and Societies:

Certification Commission of Slovak Trade Inspection - SKTC (J. Hojerová)
 Commission for Technical Standards no 79 (cosmetics) of Slovak Institute for Technical Standards (J. Hojerová)
 Cosmetological Society (J. Hojerová)
 Editorial board of Bulletin of Food Research (Š. Schmidt)
 Expert of the Slovak National Accreditation Service – Technical Commission TVA-L4 (B. Hozová)
 Incheba, Joint Stock Company - Technical Committee (J. Hojerová)
 Members of Committee of the Slovak Chemical Society (Š. Schmidt)
 Member of Committee of the Food Section SCHS (J. Zemanoviè, B. Hozová, Š. Schmidt)
 Slovak Academy of Agriculture (V. Palo)
 Science - Technical Society (B. Hozová)
 Slovak Chemical Society (M. Greifová, I. Niklová, V. Frank, ¼ Kuniak, V. Palo, Sekretár S.)
 Slovak National Committee of International Dairy Federation (V. Palo)
 Slovak Gold (J. Hojerová)
 Slovak Society of Agricultural, Food and Forestry Science (V. Palo, J. Augustín)
 Top Council of Slovak Dairy Union (V. Palo)

D. Membership in International Organizations and Societies

Federation of European Chemical Societies, Division of Food Chemistry (Schmidt)
 Czechoslovak Microbiology Society (B. Hozová, J. Augustín, M. Greifová, ¼ Valík)
 Austrian Chemical Society, Austria (J. Zemanoviè)
 International Federation Society of Cosmetic Chemists (IFSCC), USA (J. Hojerová)

E. Tempus Programme:

F. International Scientific Programmes:

Copernicus project PL 979012 "Rapid, specific detection of Listeria monocytogenes by antibody-based techniques and on-line sensor technology".

G. Visitors from Abroad:

Ing. A. Štofíková	Aluso sro, Prague, Czech Republic, November 2000 (2 days)
Ing. J. Galeèka	Gimex, sro, Zlín, Czech Republic, July 2000 (2 days)
Prof. V. Filip	University of Chemical Technology, Prague (1 day)

H. Visits of Staff Members and PhD Students to Foreign Institutions:

VI. THESES AND DISSERTATIONS

A. Graduate Theses (MS Degree) for state examinations after five years of study (supervisors are written in brackets):

Bouma J.:	Nutrition of milking cows and milk quality. (Rusová M.)
Baèeková M.:	Influence of polyene fatty acids in nutrition on lipid parameters in blood. (Š. Schmidt)
Borová A.:	Enhancing of reproducibility of milk testing for inhibitors. (V. Palo)
Csefalvayová L.:	Special feeding fats for industrial purposes. (Š. Schmidt)
Cyprichová D.:	Selection of application possibilities of water soluble glucan in dairy products. (¼ Kuniak)
Cviková Petronela.:	Study of brine properties in production of Akawi cheese. (V. Palo)
Deanková E.:	Changes in microbial contamination of homogenates from fructification bodies of oyster mushrooms. (V. Frank)
Habalová K.:	Fractionation of extract from evening primrose meal. (I. Niklová)
Hanusová B.:	Influence of polyenic fatty acids in nutrition on lipidic parameters in blood. (J. Hojerová)
Lauková D.:	Bacillus cereus and total count of microorganisms in pasteurised cream. (¼ Valík)
Lenkeyová I.:	Creation of histamine and cadaverine by Enterobacter aerogenes under various conditions. (M. Greifová)
Malíková M.:	Reaction mechanism of plant xyloglucanases. (J. Augustín)
Marèeková M.:	Quantitative analysis of growth of Bacillus cereus in pasteurised milk. (¼ Valík)
Minarovièová ¼:	Evaluation of selected parameters of microbial quality of goat milk. (B. Hozová)
Neradová B.:	Luminometric measurement of sanitation efficiency in dairy

Pastorová J.:
industry. (½ Valík)
Production of polysaccharide hydrolases by Rhizopus genera. (J. Augustín)

PhD Students:

Iva Blanáriková; Katarína Cvopová; Branislav Dugovič; Róbert Fischer; Andrea Gogová; Katarína Hrnčáriková; Andrej Kolarovič; Martin Kováč; Jozef Saloň; Jana Sikoraiová; Friderich Szemes;

Technical Staff:

Augustín Jurkovič; Eva Kaisová; Jana Lehká; Lila Livačová; Mária Nemcová; Mária Somorovská; Eva Tobiašová; Stanislav Tomek; Iva Viskupičová;

II. TEACHING AND RESEARCH LABORATORIES

Laboratory practice:

Basic Skills in Organic Chemistry Laboratory I, II.

Organic Synthesis Laboratory Projects I, II.

Research laboratories:

Laboratory of Organic Synthesis

Laboratory of Chiral Cycloaddition Reactions

Laboratory of Heterocyclic Chemistry

Laboratory of Stereoselective Synthesis

Laboratory of Applied Organic Synthesis

Laboratory of Natural Compounds

Laboratory of Nuclear Magnetic Resonance Spectroscopy

Laboratory of IR and UV Spectroscopy

Laboratory of Gas Chromatography

III. TEACHING

A. Undergraduate Study

3rd semester

Organic Chemistry	(2-2h)	Marchalín, Gracza
Organic Chemistry Laboratory	(0-4h)	all teachers and research workers

4th semester

Organic Chemistry	(2-2h)	Fišera, Považanec, Uher
Organic Chemistry Laboratory	(0-5h)	all teachers and research workers

5th semester

Chemical Information	(1-1h)	Uher
----------------------	--------	------

6th semester

Chemical Specialities	(2-2h)	Mravec, Štibrányi
Semestral Project	(0-4h)	Fišera, Gracza, Považanec, Šafařík, Štettinová, Štibrányi, Végh

7th semester

Organometallic Compounds	(1-1h)	Gracza
Mechanisms of Organic Reactions I	(3-1h)	Fišera
Bioorganic Chemistry	(2-0h)	Uher
Laboratory Project I	(0-10h)	Šafařík, Korečová
Organic Chemistry III	(1-1h)	Považanec

8th semester

Organic Synthesis	(2-1h)	Floch
Asymmetric Synthesis	(2-1h)	Gracza
Stereochemistry	(0-2h)	Štibrányi
Spectroscopic Methods in the Control of Technological Processes	(2-2h)	Stankovský, Šegedi
Laboratory Project II	(0-6h)	Šafařík, Štibrányi,
Training at Industrial Production Floor	15 days	Berkeš, Fišera, Gracza, Marchalín, Milata, Špírková, Považanec

9th semester

Mechanisms of Organic Reactions II	(1-1h)	Marchalín
Applied Organic Synthesis	(1-1h)	Považanec
Chemistry of Heterocyclic Compounds	(2-0h)	Stankovský
Physical Organic Chemistry I	(0-2h)	Milata
Chemistry of Natural Compounds	(2-0h)	Berkeš
Laboratory Project	(0-10h)	Berkeš, Fišera, Gracza, Marchalín, Milata, Špírková, Považanec,

10th semester

Diploma Seminar	Považanec
Diploma Thesis Project	Bobošíková, Fišera, Korečová, Šafařík, Špírková, Považanec, Štibrányi, Végh

IV. CURRENT RESEARCH PROJECTS**A. Stereoselective cycloadditions of heterocyclic compounds (Ľubor FIŠERA)**

The primary aim of Prof. Fišera's research is devoted to the search of the stereoselective and regioselective cycloaddition reactions of chiral or achiral 1,3-dipoles to achiral or chiral alkenes and heterocyclic compounds possessing an endo- or exocyclic C=C double bond with the subsequent transformations of so prepared adducts to the bioactive iminopolypols, * - amino acids, lactones, lactames as well as to the new heterocyclic compounds, hardly accessible by another way and which can have a potential biological activity (pharmaca, agrochemicals).

In the past several years, considerable success has been achieved in this group in the utilization of heterocyclic compounds as dipolarophile components in the 1,3-dipolar cycloaddition (some 60 papers published in this field). The last papers have been devoted to the stereo- and regioselectivity of nitrile oxide and nitrone cycloadditions to heterocyclic derivatives having exo- and endocyclic C=C double bond. The syntheses of chiral dipoles and dipolarophiles from the natural materials such as sugars, *-aminoacids are included. Finally, the utilization of so prepared adducts as the synthetic equivalents by means of photochemical and reductive transformations are used for the synthesis of products of diverse biological activities.

B. Fused O, N-containing heterocyclic compounds (Alžbeta KRUTOŠÍKOVÁ)

The research concerns the synthesis and characterization of new condensed heterocyclic compounds of the type furo[3,2-b]pyrroles, furo[2,3-b] pyrroles, furo[3,2-c] pyridines, furo[3,2-b:4,5-b'] dipyrrroles and pyrrolo[2',3':4,5]furo[3,2-c] pyridines, prepared from reactive substituted vinylazides. By the solution of optimal conditions for the introduction of new reaction centres into molecules of the observed systems were gained new suitable starting compounds for synthesis of more complex systems. On the basis of results obtained by the study of electrophilic reactions, the rules became more common for the input of electrophilic reagents to furo[3,2-b] pyrrole skelet and it was proved that the validity is in agreement with the calculations gained by MNDO method. In studying the reactions with dienophiles was confirmed the dual character of furo[3,2-b] pyrrole skelet and benzo[b] condensed system, which in dependence on the attached substituents give addition and cycloaddition products. During the remaining reactions take place interesting transformations of furo[3,2-b] pyrrole or furo[2,3-b] pyrrole skelet leading to the substituted benzo[b] furans, indoles, benzo[b] furo[3,2-b]indoles and their condensed derivatives which led to the opening of a new way to inaccessible O-N-containing variously substituted heterocycles.

C. Synthesis, reactions and biological activity of 2H-2-pyranones and 2H-1-benzopyran-2-ones. (Ľubomír FLOCH)

The title a-pyrone have found applications in medicine and as agrochemicals. The research project aims at preparation of designed a-pyrone in order to build them into more complex molecules with expected pesticidal and antiproliferation activity. Novel sulfonyl-a-pyrone built in sulfonylureas have been synthesized, the target molecules having molecular formula a-pyrone (or benzopyrone)-SO₂-NH-CO-NH-heterocycle. The testing of biological activity is carried out in cooperation with the Department of Microbiology, Biochemistry, and Biology (Prof.K.Horáková).

D. Stereoselective reactions in natural product synthesis (Tibor GRACZA)

The study of stereoselective reactions and their applications for the syntheses of naturally occurring compounds, or optically pure building blocks, represents the principal research area of Dr. Gracza's group. A new, general approach to optically active anhydroalditols have been developed, using the stereocontrolled palladium(II)-catalyzed oxycarbonylation of enitols as a key step. This strategy have been applied in the total syntheses of some cytotoxic natural dihydroxystyryl lactones like (+)-goniofufurone and its 7-epimer, as well as their enantiomers. Extension of Pd(II)-promoted bicyclization to optically pure unsaturated aminopolypols offered a very potent way to polyhydroxylated saturated nitrogen heterocycles, many of which are glycosidase inhibitors (related to deoxynojirimycin, DMDP, castanospermine, swainsonine).

E. Azole activated methylene group in condensation reaction with heterocyclic aldehydes (Rudolf KADA)

Synthesis of new heterocyclic compounds with assumed biological efficacy. Utilization of 3-heteroaryl-2-X-propenoic acids with the aim of synthesizing especially new types of substituted benzothiazoles, benzoxazoles and benzimidazoles. From the theoretical viewpoint, the research brings the synthesis of new heterocycles and reexamination of their chemical behaviour, spectral characteristics and from the practical point of view it is possible to investigate their properties as potential medicaments. In previous papers dealing with furan derivatives on reaction with nucleophiles it was found that 5-X-2-furylethylene derivatives undergo either a nucleophilic replacement of X or an addition of the nucleophile to the C=C double bond depending on the character of the electronwithdrawing group at C-2 of the furan ring.

F. Synthesis of 1,4-dihydropyridines and new tricyclic diazepines (Štefan MARCHALÍN)

Deals with the chemistry of 1,4-dihydropyridines and 4H-pyrans. Activated, *,-*-unsaturated ketones serve as synthons for the synthesis of substituted 4aryl (heteroaryl)-1,4-dihydropyridines and 4aryl(heteroaryl)-2-amino-3-cyano-4H-pyrans.

In the area of 1,4-dihydropyridines are investigated the reactions of 4-aryl(heteroaryl)-2 formyl-1,4-dihydropyridines. The splitting of racemic 4aryl-1,4-dihydropyridine-3-monocarboxyl acids through diastereoisomeric salts is used as a method for the preparation of new chiral 1,4-dihydropyridines.

Further research is oriented to thiophene analogues of natural alkaloids where the preparation and reactivity of thieno[b] quinolizidinones and thienoindolizidinones has been studied.

G. Synthesis and spectral properties of fused heterocycles (Viktor MILATA)

In last years rich experience in the synthesis of substituted push - pull ethylenes, which are remarkable for their significantly polarised multiple bond, has been collected. Reactions of various types (hetero)arylamines (substituted anilines, aminobenzimidazoles, aminobenzotriazoles, quinoxalines etc.) with activated alkoxyethylenes (alkoxymethylene derivatives of propanedinitrile, dialkyl propanedioates, 2,4-pentanedione, alkyl 3-oxobutanoates, 3-oxobutanenitrile or alkyl cyanoacetates), structure of products and their synthetic utilisation in thermal cyclisation (Gould - Jacobs reaction) - which produce the nalidixic acid type quinolones, imidazoquinolones, triazoloquinolones, pyrazinoquinolones were studied. Also research on dihydropyridines and reactions of 1-hydroxymethylbenzotriazole, 1-hydroxymethylbenzimidazole is being carried out.

H. Synthesis of analogues natural products (František POVAŽANEC)

The principal research area of Dr. Považanec concerns the study of preparation and reactions of heterocyclic compounds, the emphasis being on polycyclic heterocyclic compounds with built-in 1,4-diazepine skeleton. Dr. Považanec is interested mainly in the cyclization and cyclocondensation reactions, which are expected to furnish polycyclic heterocycles possessing bioactivity.

Recently, chiral substrates aroused his interest in that they allow one to prepare polycyclic heterocycles carrying one or more chiral centres. The presence and appropriate configuration of chiral centres has been recognized as pivotal factor in influencing the range of bioactivity of the diazepine-type substrates.

I. Imidoyl chlorides and imidoylisothiocyanates in the synthesis of new condensed ring's systems (Štefan STANKOVSKÝ)

In series of quinazoline compounds was found a new synthetic method on the basis of imidoyl or amidinoyl isothiocyanates that enables to avoid the complicated processes starting from anthranilic acid. The obtained quinazoline-4-thiones were used for the synthesis of fused 1,2,4-triazolo-, dihydroimidazo-, trihydropyrimido-, and tetrazolo-quinazolines. Quinazoline fused benzotriazepines and benzotetrazepines were prepared by the suitable functionalization of quinazoline skeleton.

J. Synthesis of fused quinazoline derivatives (Katarína ŠPIRKOVÁ)

The research activity of Dr. Špirková concentrates on condensed quinazolines, aiming at preparation of tricyclic, potentially bioactive structures, such as 1,2,4-triazolo[4,3-c] quinazolines, 2H-imidazo- and 2,3-dihydropyrimido[1,2-c] quinazolines. The annelation of further rings takes place across the thione bond of 3H-quinazoline-4-thiones by cyclisation and cyclocondensation reactions.

The quinazolines are also the cornerstone of research into synthesis and properties of structural analogues of folic acid. The target molecules are both classical and non-classical antifolates, based on the 3H-quinazoline-4-thione skeleton.

K. Synthesis of nitrogen, phosphorous heterocycles (Ladislav ŠTIBRÁNYI)

Synthesis of 5- and 6-membered nitrogen heterocycles. Preparation and study of substituted triazacyclotriphosphazenes carrying nitrogen, sulphur, or oxygen-containing heteroaromatic ligands. Study of nucleophilic reactions on the hexachlorotriazacyclotriphosphazene with ligands capable of metal-complexing. Computer modelling of structure and reactivity. Preparation of derivatives substituted by 1,3-dithiane and their transformation into carbonyl derivatives.

L. Transformation of g-pyranone derivatives to the analogues of naturally occurring bioactive compounds (Michal UHER)

Project is geared at the preparation of the derivatives with possible biological activity with the perspective to use in pharmacology, cosmetics, agriculture and food industry. As main substrate for the transformation serves multifunctional g-pyranone derivative 5-hydroxy-2-hydroxymethyl-4H-pyran-4-one (kojic acid). Its manufacture by fermentation is patented in Slovakia. Its decomposition leads to non-toxic products which can enter the circulation of biogenic elements in the nature.

M. Synthesis of oligomers and polymers, based on novel five-membered heterocycles, aiming at study and utilization of their conductivity and opto-electronic properties (Daniel VÉGH)

Basic research in the field of novel five-membered heterocycles their oligomers and polymers. Search for simple, high-yield synthetic routes leading to heterocycles the oligomers of which will serve as model for polyheterocycles. The latter

are expected to possess electric, opto-electric and electroluminescent properties, qualifying such materials as optical storage media, antistatic coatings, electronic membranes for microelectronics. Also, they can be used in designing electrochemical energy sources, for instance as polymeric electrolytes, novel batteries, as well as in optical sensors and biosensors for monitoring the environment. We intend to design such novel compounds, capitalizing on the relationships between structure and physical properties, solubility, polymer workability. Based on theoretical consideration and calculated predictions we synthesized novel 2,3-substituted thieno[3,4] pyrazine and new pentacyclic dipyrido[3,2-a, 2',3'-c] -thieno-[3,4] azine derivatives, systems with lowest bandgap (0,7 eV). In order to study the effect of the substituent on the chemical and physical properties (also electrical conductivity) twelve new 3-(3-thienyl)glutaric acid derivatives were prepared by easy, novel one step procedure in multigram quantities. Homo or hetero oligo- and polymerization of derivatives was achieved by chemical and electrochemical polymerisation.

V. COOPERATION

A. Cooperation in Slovakia

Slovakofarma, Hlohovec
 Synkola, Bratislava
 Duslo, Šačká
 Slovak Academy of Sciences, Bratislava
 Institute of Chemical Technology, Bratislava
 Institute of Food Research, Bratislava
 Tau-Chem, Bratislava
 Chemko, Strážske
 Institute of Drugs Research, Modra
 Tatra Trade, Prievidza
 Institute of Preventive Medicines, Bratislava
 National Center of Oncology, Bratislava
 Georganics, Bratislava
 Q-Chem, Bratislava

B. International Cooperation:

Inst. für Organische Chemie TU Vienna, Austria
 -The synthesis of heterocyclic compounds, organization of Blue Danube Symposium on Heterocyclic Chemistry.
 Inst. für Organische Chemie Univ. Stuttgart, Germany
 -Stereoselective dipolar cycloaddition and oxycarbonylation reactions
 Inst. für Organische Chemie Univ. Berlin, Germany
 -Stereoselective reactions of chiral nitrones

I. STAFF

Full Professors:
Milan Hronec, PhD, DSc;

Associate Professors:
Alexander Kaszonyi, PhD; Dušan Mravec, PhD; Ján Vojtko, PhD

Research Fellows:
Zuzana Cvengrošová, PhD; Magdaléna Štolcová, PhD; Dana Gašparovičová; Katarina Fulajtárová;

PhD students:
Michal Báhidský; Dana Grošková; Jana Horniaková; Vieroslav Krátky;

Technical Staff:
Eva Šuleková; Jozef Tánczos; Ľudmila Tvarožková;

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories:

Technological laboratory I, 2, 3, 4
Computer seminar room

B. Research Laboratories:

Laboratory of catalytic processes
Laboratory of reactor technique
Laboratory of spectroscopic methods

III. TEACHING

A. Undergraduate study

1. Introductory courses

4th semester (spring)

Organic Technology and Petrochemistry (3-1 h) Hronec, Králik, Kaszonyi

6th semester (spring)

Fine Chemicals (2-2 h) Mravec
Semestral Project I (0-4 h) Cvengrošová, Kaszonyi, Králik, Mravec,
Štolcová, Vojtko

2. Advanced Courses

7th semester (autumn)

Chemical-Engineering Thermodynamics (0-2 h)	Vojtko
Catalysis (2-0 h)	Hronec
Engineering Calculations on a Computer (1-2 h)	Kaszonyi
Processes of Organic Technology (2-1 h)	Králik
Laboratory Practise I. (0-8)	Vojtko, Mravec

8th semester (spring)

Kinetics and Reactors (0-2 h)	Kaszonyi
Design of Chemical Processes (2-1 h)	Hronec, Králik
Technology of monomers and polymers (2-0)	Vojtko
Special Organic Products (2-0 h)	Mravec
Analysis of Complex Organic Systems (0-2 h)	Štolcová, Cvengrošová
Laboratory Practise II. (0-7 h)	Cvengrošová, Hronec, Kaszonyi, Králik, Mravec, Štolcová

9th semester (autumn)

Coating materials (2-0)	Kramár, Lapeš
Manufacturing of Pharmaceuticals (2-1 h)	Mravec
Laboratory Practise III. (0-14 h)	Cvengrošová, Hronec, Kaszonyi, Králik, Mravec, Štolcová, Vojtko

10th semester (spring)

Seminar to Theses (0-3 h)	Cvengrošová, Hronec, Kaszonyi, Králik, Macho, Mravec, Vojtko, Štolcová
---------------------------	---

B. Postgraduate study

Catalysis (2-0) Hronec

IV. CURRENT RESEARCH PROJECTS**A. Catalysts for industrial applications (Milan Hronec)**

- Synthesis of new inorganic catalysts and their application

Over hydroxyapatite catalysts, a direct synthesis of phenol from benzene in the gas phase was studied. The reaction proceeds at atmospheric pressure at 400-500 °C in the presence of ammonia. The selectivity of phenol formation of about 97 % was achieved over catalysts containing calcium and copper ions in the cation part of hydroxyapatite.

- Catalysis over zeolites

The comparative study of biphenyl tert-butylation and isopropylation over shape selective catalysts in the liquid phase was carried out. Catalysts were characterised by the TPDA, SEM, X-ray diffraction and acidity measurements. Formation of cerium dioxide was proved in the catalysts modified with cerium. Increase in the selectivity to linear alkyl derivatives at increased content of cerium was found.

- Microporous organic materials

Palladium catalysts dispersed on microporous sulphonated poly{styrene-divinylbenzene) were investigated in the hydrogenation of substituted aromatic nitro compounds. Comparison with palladium catalysts supported on carbon showed on a significant influence of the support, as well as used solvents, on the catalytic activity and selectivity in the preparation of chloro-anilines from the chloro-nitrobenzene precursors.

V. COOPERATION**A. Cooperation in Slovakia:**

Slovnaft, Bratislava

VUP, Prievidza

DUSLO, Šaška

AQUACHEMIA Ltd. Žilina

B. International Cooperation:

ENSCM, Montpellier, France:

- zeolite catalysts
- physico-chemical characterisation of solid catalysts

Universita di Padova, Italy:

- polymer supported catalysts, characterisation

Italian National Centre of Research, Padova - Legnaro, Italy:

- preparation of organic supports for catalysts

Universita di L'Aquila, Italy:

- heterogeneous catalysis
- characterisation of microporous polymer supports

Czech Academy of Science, Prague:

- characterisation of polymeric materials as supports for catalysts

C. Membership in Domestic Organisations and Societies:

Editorial Board of Journal: Petroleum and Coal, (M. Hronec, M. Králik)

Editorial Board of Journal: Vlákná a textil (Fibers and Textile (M. Hronec)

SCHS (Slovak chemical Society) (Hronec, Kaszonyi, Králik, Mravec)

SPCH (Slovak Society for Industrial Chemistry), Chairman of the Catalysis Society (M. Hronec)

GAT pre petrochemickú, organickú a anorganickú chémiu (grant committee for petrochemistry, organic and inorganic chemistry) (M. Králik)

D. Membership in International Organisation and Societies:

National representative of the European Federation of Catalysis Societies (EFCATS) (M. Hronec)

Member of the European Academy of Sciences and Arts (M. Hronec)

F. International Scientific Programmes

- project No. 8217: Alkylation of polynuclear aromatics for the selective synthesis of dialkylated monomers, precursors of advanced polymers: activity and selectivity of zeolitic catalysts and computational analysis of the experimental results (D. Mravec):

- ENSCM-CNRS (UMR 5618), Montpellier, France

- Institute of Polymers, Slovak Academy of Sciences, Bratislava

- Department of Organic Technology, Slovak University of technology, Bratislava

- Optimisation of the catalytic properties of synthetic organic matrices through chromatographic and spectrometric analysis ("at hoc" project without an official registration number, financed individually by participants involved) (M. Králik):

- Department of Chemistry, University of L'Aquila, Italy (co-ordinator)

- Department of Inorganic, Metallorganic and Analytical Chemistry, University of Padova, Italy

- Department of Physical Chemistry, University of Padova, Italy

- Italian National Centre of Research, Padova - Legnaro, Italy

- Czech Academy of Science, Prague

- Department of Organic Technology, Slovak University of Technology, Bratislava

period of co-operation: January 1997-December 2000

G. Visitors from Abroad

Dr. K. Ježábek	UTZCHT Czech Academy of Sciences, Prague January 12 - 14
Professor B. Corain	University of Padova, Italy, January 12 - 15
Dr. J. Joffre	ENSCM-CNRS of Montpellier, France, April 20 - 28
Dr A. Biffis, Dr. G. Zanmarchi	University of Padova, Italy, April 25 - 30

III. TEACHING

A. Undergraduate study

4th Semester (spring)

Organic Technology and Petrochemistry (3-1 h) Bajus, Smiešková, Dauèík

7th Semester (autumn)

Catalysis	(0-1 h)	Hudec
Analysis of Petroleum Products	(2-0h)	Dauèík
Technology of Crude Oil	(3-0 h)	Židek, Smiešková
Combustion Processes	(1-2 h)	Smiešková
Engineering Calculations on Computer	(0-2)	Ambro
Laboratory exercise 1	(0-8 h)	Dauèík

8th Semester (spring)

Alternative Fuels	(2-1 h)	Bajus
Catalytic and Thermal Processes in Crude Oil Treatment	(3-0 h)	Židek
Tribology	(2-0 h)	Hájeková
Kinetic and Reactors	(0-2 h)	Hudec
Laboratory exercise II	(0-8 h)	Hudec

9th Semester (autumn)

Petrochemistry	(3-0 h)	Bajus
Refinery and Petrochemical Plants	(1-1 h)	Dauèík
Laboratory exercise III	(0-10 h)	Hudec

IV. CURRENT RESEARCH PROJECTS

A. New catalysts for industrial applications (Milan Hronec)

In petroleum industry and petrochemistry, still growing applications find a catalytic materials with precisely defined structure and acidic-basic properties. Among such suitable catalysts, zeolites and ordered mesoporous materials play role as basic components. The project is oriented to development of knowledge of the role of heterogeneous catalysts in selected refinery and petrochemical processes, to develop the relation between composition, structure and method of the catalysts preparation and their catalytic properties. The research is oriented into following subjects:

1. Characterization of influence of extraframework aluminum on acid and catalytic properties of zeolites USY and steamed ZSM-5 (measured by XRD, IR, TPDA, surface area, pore size distribution, distribution of Brønsted and Lewis acid sites and their common induction effect). Influence of the stabilization conditions and method of following acid modification are studied.

2. Study of method of the incorporation and quantity of zinc and its influence on the activity of Zn-ZSM-5 zeolites in aromatization of light hydrocarbons - examination of liquid ion exchange as well as solid state ion exchange, characterization of samples by TPDA, IR and by catalytic tests.

3. Preparation of materials with ordered mesoporous structure as MCM-41. Such materials are potential suitable components of the new generation of FCC, HC and HR catalysts in relation to their wide mesoporous structure with the pore diameter of 4 - 10 nm.

4. Hydrorefining (HDS, HDN) of middle petroleum distillates with the aim to explain the reason of lower color stability of gasoline, kerosene and gas oil from hydrocracking of heavy residues. Studies are carried out in a laboratory pressure reactors using commercial hydrorefining catalysts under conditions used in refineries.

B. Interactions between composition and properties of fuels, lubricants and heavy oil products (Pavol Daučík)

Oil products quality improvement is a general trend to utilize more effectively the expensive raw material, to prolong the lifetime of machines and equipment where oil products are used. Nowadays it is an obvious requirement to minimize the negative effects of oil products on the environment. Fuels, lubricants and heavy oil products form the major part of products which are actually used in all fields of industry and common consumption. Functional properties are the deciding factors for the product choice in certain use in practice. At comparable qualitative parameters, the economic standpoint is the decisive factor in the choice from the appropriate supply. Then, the price regarding the consumption and qualitative properties is the deciding criteria in the product choice. Nowadays the product choice is expressively influenced by ecological standpoint. It is unequivocal that ecological and economic standpoints contradictory effect on the product choice. Hence, the ecological criteria is influenced only by legislation stated rules. Ecological viewpoint gets then its priority and in some countries the maximum content of aromatics, sulfur and metals are determined by law.

Project is aimed at the interactions between the composition and the properties of oil products and additives. The main target is the evaluation of oxidative stability, rheological properties, effects of additives on functional properties of fuels, lubricants and heavy oil products. Project's intention is to utilize correlation between composition and properties of the product to evaluate the quality and the optimal composition of the given product. From the ecological standpoint the determination of aromatic hydrocarbons content, sulfur and metal content is significant, with the goal to evaluate the effect of minimization of the content of these compounds on the functional properties of products.

C. Thermal and catalytic conversion of petroleum and alternative feedstock to refinery products and petrochemical and theirs biodegradability (Martin Bajus)

Most intermediates and monomers in the petrochemical industry are currently produced starting from alkenes and aromatics as building blocks. Alkenes are obtained mainly by steam cracking (pyrolysis) of hydrocarbon from petroleum and natural gas. The original aim of the research project is based on copyrolysis of high and low molecular hydrocarbons, for example: hexadecane and heptane. Under conditions of copyrolysis of hydrocarbons of paraffinic character to low molecular alkenes and aromatics, there occurs a minimal process of secondary reactions and as a result of which are formed highly molecular sediments, pitches and coke in the reactor and heat exchange apparatus in the pyrolysis system and carbon oxides. A significant theoretical contributions is expected in the clarification of the interaction taking place in the copyrolysis between different hydrocarbons, in the determination of how, in the interaction, the overall kinetics of pyrolysis and the composition of products change.

Research is now being aimed at the replacement of some of raw materials with alkanes, which are more economical than the corresponding olefins, readily available and with low toxicity as compared to aromatics. The challenge of methane transformation to liquid fuels has directed research first towards i) the oxidative coupling to ethane and ethylene and ii) oxidation to methanol as one of the most promising routes for valorization of methane. Particular reactor based on porous ceramic membranes, both inert and catalytic.

Pollution of environment by refinery products and petrochemicals represents a serious problem. This is reason why selection, physiological and biochemical studies microorganisms with ability to biodegrade selected pollutants, is a part of research program. Recognition of key biochemical intermediates enable us a design of metabolic pathways and biodegradation kinetics for model substances under given conditions.

Laboratory of Molecular Distillation

C. Special Measuring Instruments

Electron Paramagnetic Resonance Spectrometer BRUKER ER 200D-SRC

Differential Scanning Calorimeter DSC-7 Perkin-Elmer with an accessory for dynamic DSC

III. TEACHING

A. Undergraduate study

1. Introductory courses

3rd semester (autumn)

Physical Chemistry I	(3-2 h)	S. Biskupiè, A. Gatial
Laboratory of Physical Chemistry	(0-3 h)	P. Šimon

4th semester (spring)

Physical Chemistry II	(3-2 h)	S. Biskupiè, P. Kovaèk, A. Gatial,
Laboratory of Physical Chemistry II	(0-3 h)	P. Šimon

2. Advanced courses

5th semester (autumn)

Physical Bases of Molecular Spectroscopy	(2-2 h)	A. Staško, V. Brezová
--	---------	-----------------------

6th semester (spring)

Biophysical Chemistry	(2-2 h)	M. Valko
-----------------------	---------	----------

7th semester (autumn)

Chemical Physics I	(2-1 h)	P. Pelikán
Thermodynamics	(2-1 h)	P. Šimon
Kinetics and Catalysis	(2-1 h)	P. Kovaèk

Colloid Chemistry	(2-0 h)	J. Antalík
Statistical Treatment and Evaluation of Experimental Data	(2-0 h)	M. Breza
Groups Theory and Symmetry	(2-0 h)	M. Breza, V. Kvasnička
Laboratory of Advanced Phys. Chem. I	(0-8 h)	V. Adaměk
8th semester (spring)		
Chemical Physics II	(2-1 h)	S. Biskupiè
Physics of Solid Phase	(2-0 h)	M. Breza
Laboratory of Advanced Phys. Chem. II	(0-6 h)	P. Raptá
Traineeship		
Excursion		
9th semester (autumn)		
Molecular Spectroscopy	(2-1 h)	A. Staško
Chemical Physics III	(2-0 h)	A. Gatial
Laboratory of Advanced Phys. Chem. III	(0-10 h)	V. Adaměk

IV. CURRENT RESEARCH PROJECTS

A. Structure and Reactivity in Chemical and Biological Systems (Andrej Staško)

The research activity of our group is focused on the intermediates formed in various systems using electrochemical techniques (cyclic voltammetry) and spectroscopic methods (EPR, UV, Vis, and NIR). One of the most investigated systems remains C60 fullerene, where the formation of anion radicals is followed in the cathodic or photochemical reduction with Et3N, TiO2 or other donors. Lately we expanded such studies also to C70 and C120 fullerene. The results obtained bring new aspects in the interpretation of the EPR spectra of fullerene anions.

To obtain a new quality of information we are developing *in situ* spectroelectrochemical techniques under a simultaneous exploitation of EPR, UV, Vis, NIR spectroscopy and cyclic voltammetry. This enables an unambiguous assignment of the spectral data to the species generated in the electron transfer reactions, what is frequently not possible if the experiments as cyclic voltammetry, NIR or EPR measurements are carried out separately, especially if more unstable intermediates are expected. The technique developed was successfully applied in the fullerene investigations, in the description of unstable dimers on the conducting films from polymers, in the redox processes of conducting polypyrrols and also in the investigations of components used in the preparation of light diodes.

The quantitative EPR spectroscopy remains a permanent problem due to the very limited reproducibility, as various parameters (position of the sample in the cavity, its shape, changing parameters of spectrometer and others) are very sensitively reflected in the integral intensity of EPR signals. To map and to eliminate these error sources an intensive research is carried out in numerous laboratories. Systematic investigations and a valuable contribution to this field was lately published from our laboratory, where the influence of the probe position, its size and other parameters were described enabling the elimination of many errors frequently neglected so far. The results obtained allow to predict the change of EPR amplitude on the position and the shape of the sample.

The role of the radical processes is increasingly recognised not only in the living organisms but also in the foods, where the radical mechanisms are frequently responsible for their loosing quality. Based on this assumption, various methods to test the quality of foods were elaborated. We also started research in this field applying EPR spin trapping in the investigations of stability of beer probes from the Slovak and Czech market and then also from the German market and suggested a procedure enabling to compare and to predict the beer stability of various probes. Similarly we suggested and tested by now some procedures to evaluate the antioxidant - scavenging activity of wine probes.

B. Development and application of computational methods to the study of structure, dynamics and properties of molecular systems (Stanislav Biskupiè)

1. A new method for generation of the relativistic Gaussian basis sets has been elaborated and implemented. The optimization method is based on the stochastic two-step procedure.

2. Theoretical treatment for calculation of the interaction energy of two closed shell systems and the molecular complex containing one open and one closed shell system has been formulated and applied in order to test the reliability of the proposed theory. New method is based on the 3rd order many body perturbation theory. The superposition error elimination was the subject of our investigations, too.

3. Precise calculations based on the MR SDCI method has been applied in order to obtain a good estimation of the potential hypersurface for HFF open shell molecular system with the aim to use it as a basic input for the future molecular dynamics studies. Sufficiently large active space has been used in all calculations.

4. Quantum chemical study of the azomethane decomposition has been done. Several kinetic parameters of the reactions under study were calculated.

5. Infrared spectra of selected organic compounds have been registered. Their interpretation and conformational analysis is based on the ab initio method with inclusion of the correlation energy.

6. Based on the newly developed theoretical treatment the calculation of the adiabatic and/or nonadiabatic corrections to the energy and vibrational frequencies has been done.

7. Periodic solid state systems have been studied within the originally reformulated theoretical treatments on the basis of the INDO type semiempirical hamiltonian.

8. The mutual influence between perturbation of the electronic structure of molecules and perturbations of regular geometric arrangement of atoms in molecules has been studied. In systems with degenerate electronic states, the perturbations are due to vibronic interactions, whereas in cis-trans phosphazenes the perturbations are a consequence of non-equivalence of interatomic interactions.

C. MATERIALS – physico-chemical methods of their study and their preparation (Peter Šimon)

The method for the evaluation of kinetic parameters of induction periods has been elaborated. The method enables to estimate the length of nonisothermal induction periods in the processes such as rubber curing, polymer and oil

oxidation, freezing of undercooled liquids etc. The method is expected to be applied in the quality management and risk assessment in technological processes.

Degradation and stabilisation of PVC is studied both experimentally and theoretically. The attention is paid to the non-hazardous stabilizer mixtures based on tocoferyl acetate.

The thermochemical behaviour of selected complex compounds of Ni, Cu and Co has been studied from the point of view of their application as adhesion promoters in rubber curing.

The influence of glass transition and nonisothermal treatment of amorphous metal metals Fe100-xBx (13< x < 21) on the relative permeability, core-losses and magnetic induction has been investigated.

The processes occurring in foods are modelled with the aim of hazard assessment in critical control points.

A method for the parameter evaluation in implicit and nonlinear models without the necessity of using any linearisation is suggested.

D. Separation in molecular evaporator (Ján Cvengroš)

The research project is focused on the theory of molecular distillation, the development of the short-path evaporators with wiped film and on the applications of molecular distillation. The main results in 2000 are as follows:

1. Further development of the mathematical model of the molecular distillation comprising all till now known factors which influence the process. The model allows to evaluate the influence both process and construct parameters on the output and separation, to render the information about the unmeasurable parameters, to simulate different situations in the evaporator and to optimise the process. Using the model, the effect of entrainment separator was studied, as well as the feed temperature influence on the evaporator efficiency, the influence of the evaporating film hydrodynamics and the possibilities of divided condenser. Good agreement was achieved by comparison between experimental and model results.

2. The shape of RTD-curves from the study of profiled wipers with passage channels indicates that there are three different regimes in the liquid flow on the evaporating cylinder according the liquid load, peripheral speed of wiper, its construction and its sense of movement. The strand regime with the liquid flow downward along the screw tread at prolonged residence time is considered favourable for molecular distillation to perform efficient evaporation under gentle conditions at a lowered temperature.

3. Some interesting applications of molecular evaporators were developed (regeneration of used mineral oils, purification of K1 vitamin, PCB contaminated oils treatment, preparation of neutral methyl esters of vegetable oils, preparation of methyl esters with low phosphorus content and others).

E. Band structure calculations and synthesis of new type of semi-conducting materials (Peter Pelikán)

Recently, the interest of scientists working in the synthesis of solid state materials has been focused on new type of semiconductors with wide possibilities of technical applications. Current knowledge in theoretical field is not sufficient to define the structure and properties directly but it is in the level allowing predictions of trends leading to the rational synthesis. In this way, a good co-operation of theoreticians and synthesizers, makes it possible to reduce the number of infinite synthetic possibilities down, to rationale number of synthesis of compounds with previously calculated physical and chemical properties.

The goal of proposed project in the computation of band structure of potential semi-conductive materials and, on the basis of such calculations, the synthesis of new types of materials with required properties. To achieve aforementioned goal, a method for computation of electron structure and properties of new type of materials with translation symmetry was proposed.

For this purpose we elaborate the Cluster Crystal Orbital (CCO) method for calculation of electron structure of solid state systems with translation periodicity. Within this method extremely large finite clusters containing tens of thousands of atoms are considered. This lead to inclusion of the long-range interactions which, in general have important influence on the electron properties of a solid state system. Within this method the modulo-periodic boundary conditions ensure the periodicity of the wave functions, eliminate the so-called boundary effects (the fact that bonds on the boundaries of a given cluster are unsaturated), and allow the use of the transformation to the Bloch orbital basis. Calculation of electron density based on several thousands of points of the Brillouin zone gives the values of the density matrix close to its bulk limit values. These are further used for band structure calculation.

F. Camptothecine and metal chelate – albumin interactions: The high affinity binding site in serum albumins (Marián Valko)

The anticancer drug camptothecin (CPT) is a plant alkaloid that has recently gained US approval for clinical trials as a treatment of gastric, rectal, and bladder tumors. Camptothecin contains an α -hydroxy- α -lactone ring moiety, which is critical for effective drug action. Under basic conditions (at pH > 7) the lactone is readily hydrolysed to yield the biologically inactive carboxylate form of the drug. The drug also converts to the biologically inactive form in the presence of human serum albumin (HSA) consequently in vivo stabilization of the lactone form is therefore of primary importance for it to be effective. We believe that liposomal stabilisation of camptothecin would both protect the lactone ring and be medically acceptable, thus a high resolution NMR study is planned to assess the stabilization of the lactone form and the nature of the binding to HSA.

A second objective is to investigate the mechanism of drug action. It has previously been reported that many photoactivated drugs react through free radical mechanisms and CPT is known to be a photoactive molecule. In addition radical processes are often enhanced by the presence of paramagnetic metal ions. It has therefore been proposed that CPT activity might (a) require the presence of trace metals and (b) occur through a free radical mechanism. Our preliminary results, based on Electron Paramagnetic Resonance (EPR) experiments, show that, upon irradiation at 365 nm, the Cu(II)-CPT complex does generate a combination of free radicals which in turn may cause DNA damage to cancer cells. This project will investigate further the radical mechanism of CPT action using both spin trapping experiments and biochemical tests for DNA damage.

G. Non-formal education in chemistry (Ján Reguli)

Several educational materials for secondary school teachers and for gifted students interested in chemistry were published (including the tasks for Chemistry Olympiad). The travelling interactive exhibition SCHOLA LUDUS – LIQUIDS, with 75 interactive exhibits, devoted to dynamic processes in liquids and physical properties of liquids, created in 1999,

was in 2000 installed at several places.

V. COOPERATION

A. Co-operation in Slovakia

Department of Histology, Faculty of Medicine, Comenius University, Bratislava

DEPARTMENT OF PHYSICAL EDUCATION

Head of the Department

Assoc. Prof. Miroslav Bobrík, PhD

Telephone: ++421-7-52495198
++421-7-59325639
Fax: ++421-7-52493198
E-mail: bobrik@chtf.stuba.sk

I. STAFF

Assistant Professors:

Peter Bartok, Július Fehér, Viliam Lendel, PhD, Jiána Moravcová, Dalma Sochorová, Ivan Turéáni;

Technical Staff:

Gabriela Boršányiová;

II. TEACHING AND RESEARCH LABORATORIES:

Gym 14x21 m – ground /volleybal, basketball, football/

Two Body Building rooms 15x5 m and 10x5 m

III. TEACHING:

Aerobic	(2 h)	D. Sochorová
Kalanethics	(2 h)	D. Sochorová
Harmonic gymnastics	(2 h)	D. Sochorová
Healing gymnastic	(2 h)	D. Sochorová
Aquagymnastic	(2 h)	D. Sochorová
Athletic sport	(2 h)	V. Lendel
Basketball	(2 h)	P. Bartok
Football	(2 h)	P. Bartok
Handball	(2 h)	M. Bobrík
Body building	(6 h)	M. Bobrík, P. Bartok, V. Lendel, J. Moravcová
Swimming	(2 h)	J. Fehér, I. Turéáni
Canoeing and kayak	(4 h)	M. Bobrík
Volleyball	(2 h)	J. Moravcová
Winter sports camp /skiing/		M. Bobrík, J. Fehér
Summer sports camp /		M. Bobrík, J. Fehér

IV. RESEARCH PROJECTS:

State of Physical and Motor Development of Undergraduates of CHTF STU in Bratislava (Viliam Lendel)

V. COOPERATION IN SLOVAKIA:

Faculty Physical Education and Sport of the Comenius University, Bratislava; Research Institute of Physical Culture, Bratislava; Institute of History, Slovak Academy of Sciences, Bratislava.

VI. PUBLICATIONS:

DEPARTMENT OF PLASTICS AND RUBBER

Head of Department:
Assoc. Prof. Eugen Špirk, PhD

Telephone: + 421-7-52926 053
+ 421-7-59325 589
Fax: + 421-7-524 93 198

I. STAFF

Full Professor:
Dušan Bakoš, PhD, DSc

Associate Professors:
Ivan Hudec, PhD; Viera Chráštová, PhD; Gabriela Kyselá, PhD; Eugen Špirk, PhD

Assistant Professors:
Pavol Alexy, PhD

Senior Research Fellows:
Viera Khunová, PhD

Research Fellows:
Ľudmila Ěernáková, PhD

PhD Students:
Igor Bielik; Gabriela Crkoòová; Lenka Hajduèíková; Miroslav Kršiak; Henrich Krump; Juraj Mrenica; Denisa Koniarová;
Martin Viselka; Petra Volfová

Technical Staff:
Mária Doèolomanská, Viera Godályová, Božena Lebocová, M ária Pekarovièová, Anna Tatarková

II. TEACHING AND RESEARCH LABORATORIES

Laboratory of Polymer Synthesis
 Laboratory of Polymer Solutions
 Laboratory of Polymer Modification
 Laboratory of Thermal Analysis
 Laboratory of Polymer Rheology
 Laboratory of Electron Microscopy
 Laboratory of Polymer Processing and Estimation of its Mechanical and Physical Properties
 Laboratory of Biomaterials

III. TEACHING

A. Bacalarate Study

5th semester (autumn)

Macromolecular Chemistry	(2-0 h)	Chráštová
Corrosion and Material Surface Treatment	(2-2 h)	Chovancová, Špirk

6th semester (spring)

Technology of Materials	(2-0 h)	Hudec, Marcinèin, Majling
Technological Project	(0-4 h)	

B. Graduate Study

7th semester

Polymer Physics	(2-2 h)	Cifra, Krištofiè, Šutý
Colloids and Interfaces	(2-1 h)	Bakoš, Mikula
Laboratory from Macromolecular Chemistry	(0-8 h)	Ěernáková, Volfová, Crkoòová
Macromolecular Chemistry II	(2-1 h)	Chráštová
Production and Processing of Plastics I	(3-0 h)	Hudec
Production and Processing of Rubber	(3-2 h)	Kyselá
Production and Properties of Plastics	(2-2 h)	Hudec (for students of Faculty of Mechanical Engineering)

8th semester

Production and Processing of Plastics II	(2-0 h)	Hudec
Modification of Polymers	(2-0 h)	Kyselá
Methods of Polymer Characterisation	(2-0 h)	Ěernáková
Methods of Experimental Design	(1-1 h)	Alexy
Laboratory from Production of Polymers	(0-8 h)	Alexy, Kyselá, Volfová Hajduèíková,
Production, Properties and Processing of Plastic	(2-0 h)	Hudec (for students of Faculty of Architecture)

9th semester

Polymer Processing	(3-1 h)	Špirk
--------------------	---------	-------

Polymer Blends and Composites	(2-0 h)	Khunová
Polymer Recycling and Waste Disposal	(2-0 h)	Špirk, Hudec, Khunová
Polymer Testing	(0-2 h)	Alexy
Laboratory from Processing of Polymers	(0-10h)	Alexy, Hudec, Kršiak, Krump
10th semester		
Diploma work	(0-27 h)	

IV. CURRENT RESEARCH PROJECTS

A. Study of Synthesis of Crosslinked Polymers and their Properties (Viera Chróstová)

Synthesis of polymer dispersions of styrene - butyl acrylate or other acrylic monomer was performed as the seed or multi-stage continual process in the presence of crosslinking and/or multifunctional agents in the various step of the polymerisation. The purpose of the preparation of partially crosslinked styrene-acrylate dispersion was to obtain dispersion with application properties suitable for the formulation of ecological paints. The influence of acrylic monomer type (which is fellow monomer to styrene) and the mode of such monomer addition to the polymerisation system on the film forming properties of dispersion and on the minimum filming temperature was studied. The goal was to obtain a new knowledge deals with strategy of the emulsion polymerisation and crosslinking reaction which enables to predict suitable application properties of studied dispersion. The influence of zinc salts of dialkyldithiophosphate acids with different alkyl substituents, eventually their combinations by thiazoles, on kinetic behaviour of the curing of elastomers and on the resultant properties of cured materials was investigated, too. The study was primarily concerned with the research of the optimal compositions of the crosslinking systems applicable at the curing of the real rubber mixture. The eventual antidegradation effect of the chosen organophosphate compounds in model elastomer systems was investigated at the conditions of the accelerated ageing. It was evaluated on the base of the changes of the primary properties of cured materials and the changes of the arrangement of the network.

The studies of the amine-free accelerators on the sulphur vulcanisation of unsaturated elastomers indicate, that the activity of zinc dithiophosphates in the crosslinking process is resemble to the fast accelerators. In combination with thiazoles they generate the synergistic crosslinking systems. In their presence the rate of vulcanisation and the strength characteristics of final materials are increasing. The effective rate constants of the sulphur vulcanisation of the natural rubber mixtures are in the presence of the dithiophosphate and thiazole combinations higher than in the presence of individual accelerators forming the responsible combination. Together the effective activation energy of the vulcanisation is decreasing. The combination of dithiophosphates and thiazoles do not form carcinogenic N-nitrosamines.

B. Polymer Mixtures, Composites and Recycling (Eugen Špirk)

The aim of the research project is the study of correlation between the structure, physical - mechanical, rheological and thermal properties of composites with a high content of soft and hard magnetic fillers based on thermoplastic, thermoelastoplastic and elastomeric matrix.

In the region of rubber blends the attention is oriented on following environmental problems:

- the formulation of rubber blends recipes from the viewpoint of nitrosoamine free cured system
- the applications of grinding rubber in polymer blends.

Further the research works are oriented on the particulate polymer composites based on the inorganic fillers and thermoplastic polymer matrix.

The objective of this part is to identify:

1. Suitable surface treatments for the inorganic fillers enable moulding of the composite with improved performance properties.
2. The nature of the interphase between the filler particle and polymer matrix
3. The type and level of bonding between filler surface and the matrix, and the amount of polymer physically or chemically bound to filler particles.

The main research effort in the field of polymer recycling is aimed to the development of an environmentally viable and economically effective mode of improving mechanical and rheological properties of recycled thermoplastic waste.

The project involves also development of new biodegradable polymers on the base of Polyvinylalcohol. Research is oriented forward to optimisation of processing temperature as well as biodegradability of studied polymers.

C. The Definitive Biosynthetic Skin Substitute (Dušan Bakoš)

The scientific aims of the project are in developing the biosynthetic skin substitute, which is able to be definitely incorporated in body. The study results of the basic properties of biopolymers of extracellular matrix, collagen and hyaluronic acid. The developed membranes with excellent biological and mechanical properties are chemically modified to synchronise biodegradation and wound healing.

The membranes can be widely applied in different fields of medicine. The project is supported in the frame of the Transplantation Program granted by Health Office of SR in co-operation with the Burn Department of Ružinov Hospital in Bratislava.

D. The Development of Ecologically Acceptable Flame Retardant Magnesium Hydroxide Based Polymer Composites (Viera Khunová)

The project aims to develop application specific halogen free flame retardant composites based on magnesium hydroxide and thermoplastics materials. This is being achieved via reactive processing that results in modification of the interfacial region between the filler particle surface and the polymer matrix. Modification of the interfacial region offsets the usual loss in mechanical properties resulting from the high levels of magnesium hydroxide incorporation necessary for the required flame retardant and smoke suppressant effects.

The main research and experimental effort of the project is focused on optimisation of reactive processing conditions of modified polyolefine/magnesium hydroxide composites and their evaluation in relation to end-use properties. The results achieved by the proposed mode of reactive processing have yielded remarkably positive effects, with

improvements in mechanical properties being greater than 100%, relative to an unmodified composite. This has been achieved without sacrificing the processing characteristics of the composites.

Our most recent study shows that proposed mode of reactive processing also shows great potential for the compatibilisation of post-consumer co-mingled polyolefin waste.

The project is supported by British Council in Bratislava and the collaborative partner is the Manchester Metropolitan University, Manchester, UK.

E. New generation of inks for rotogravure printing (Viera Khunová)

The project is focused on formulation of new generation of hot melt ink with extremely specific demand on their physical stage - solid at the ambient temperature and the liquid in the moment of printing. The significance of hot melt ink is based on the fact that will neither produce liquid nor volatile waste to pollute the environment. Further benefit when compared to current toluene based ink is that hot melt ink dries by solidification. Methodology is based on knowledge of polymer-polymer interactions, compatibility, and rheological calculations and measurements.

On going first phase of the project research is focused on hot melt ink rheological behavior and interactions of polymer/monomer/pigment calculations, as well as on their formulations, kinetics of melting and solidification.

The project is supported by NATO science program and the collaborative partner is the Western Michigan University, MI, USA.

V. COOPERATION

A. Co-operation in Slovakia:

Chemolak, a.s. Smolenice

Rubber Research Institute, Matador, a.s. Púchov

Research Institute of Processing and Application of Plastics, a. s. Nitra

Polymer Institute, Slovak Academy of Sciences, Bratislava

Research Institute of Chemical Technology, a. s. Bratislava

Matador, a.s. Púchov

Vegum, a.s. Dolné Vestenice

Plastika, a.s. Nitra

Slovnafit, a.s., Bratislava

NCHZ, a.s., Nováky

Orthopedical Clinic, School of Medicine, Comenius University, Bratislava

Burn Department and Skin Bank, Ružino v Hospital, Bratislava

Institute of Medical Biology, Faculty of Medicine, UK, Bratislava

B. International Cooperation:

Martin Luther University of Halle - Wittenberg, Institute of Materials Science, Merseburg, Germany

- Modification of Polymers and Polymer Processing

Technical University of Szczecin, Institute of Material Engineering, Szczecin, Poland

- Chemical and Physical Modification of Polymers

Western Michigan University, Kalamazoo, USA

- The development of new generation of hot-melt inks for rotogravure printing

The Manchester Metropolitan University, Faculty of Science and Engineering, Manchester, U. K.

- Reactive Processing of Particulate Polymer Composites

University of Minho, Department of Polymer Engineering, Guimarães, Portugal

- Development of biomaterials

- University of Pisa, Department of chemistry and Industrial Chemistry, Pisa, Italy

- Biodegradable Plastics

Clinica Puerta de Hierro, Cirugia Experimental, Madrid, Spain

- Chemical Modification and Biocompatibility, Testing of Collagen Membranes

C. Membership in International Organisations and Societies:

European Biomaterial Society, Bourdeaux, France (D. Bakoš)

G. Visitors from Abroad:

Dr. C. M. Liauw

Manchester Metropolitan University, Manchester, May 2000,(8 days)

Dr. H.J.Radusch

Martin Luther University of Halle – Wittenberg, October 2000, (4 days)

Dr. Zenon Tartakowski

Politechnika Szczecinska, Szczecin, Poland, July 2000, (4 days)

Prof. V.N. Kuleznev

MITCHT, Moskva, Russia, October 2000, (2 days)

H. Visits of Staff Members and Postgraduate Students to Foreign Institutions:

D. Bakoš

ICS-UNIDO Trieste, Italy, February 2000 (2 days)

IRC Paris, France, June 2000 (6 days)

UNIDO Workshop Seoul, Korea, September (12 days)

Conference Halle, Germany, September (4 days)

Martin Luther University of Halle - Wittenberg, Institute of Materials Science, Merseburg, Germany, June 2000 (2 weeks)

DSM Research, Geleen, The Netherlands, April 2000 (4 days)

RTS-2000, CEEPUS, Jesenik, Czech Republic, September 2000, (4 days)

UCT Pardubice, CUT Praha, IMCH Praha, Czech Republic, November 2000, (3 days)

D. Koniarová

V. Khunová

J. Mrenica	Technical University of Pardubice, Czech Republic, February 2000 (6 weeks)
P Alexy, I. Hudec, E. Špirk	Martin Luther University of Halle - Wittenberg, Institute of Materials Science, Merseburg, Germany, June 2000 (6 days)
P. Alexy, I. Hudec, E. Špirk	Martin Luther University of Halle - Wittenberg, Institute of Materials Science, Merseburg, Germany, September 2000 (6 days)
I. Hudec, P. Alexy	Politechnika Szczecinska Szczecin, Poland, November 2000 (5 days)

VI. THESES AND DISSERTATIONS

A. Graduate Theses (MS Degree) for state examinations after five years of study (supervisors are written in brackets):

Hrajková M.:	The modification of physical-mechanical properties of recycled granulates from polyolefin blends (E. Špirk)
Jelěic P.:	Modification of dynamic mechanical properties of vulcanisates with dual fillers (E. Špirk)
Kolozsváryová L.:	The influence of monomers with reactive groups on properties of poly(styrene)/poly(butyl acrylate) dispersions (V. Chrástová)
Kršiak M.:	Preparation of PVA blends for films with better solubility and biodegradability (P. Alexy)
Krump H.:	The reinforcing materials for tire construction (I. Hudec)
Matej M.:	The study of effect of collagen hydrolysate on properties of PVA films (D. Bakoš)
Šnauko M.:	Reactive processing of commingled plastic waste (V. Khunová)
Závadská V.:	The influence of additives on properties of waterborne poly(styrene)/poly(butyl acrylate) dispersions (V. Ěernáková)

B. Dissertations (PhD)

Bielik I.:	Cross-linking of Rubbers with Ecological Systems (G. Kyselá)
Crkoòová G.:	The Study of Environmentally Degradable Blends of Plastics with Biopolymers (D. Bakoš)
Hajduèíková L.:	The Study of Transport Processes of Biologically Active Compounds in Complex Biopolymer Membrane (D. Bakoš)
Koniarová D.:	The Study of Macromolecular Compositions Based on Biopolymers for Biomaterials Application (D. Bakoš)
Kršiak M.:	Utilisation of collagen hydrolysate in polymer blends (D. Bakoš)
Krump H.:	Surface treatment of reinforcing materials for tire construction (I. Hudec)
Mrenica J.:	The Study of Styrene-Butylacrylate Dispersions (V. Chrástová)
Viselka M.:	The Study of Dynamic-mechanical Properties of Rubber Blends (E. Špirk)

DEPARTMENT OF PROCESS CONTROL

Head of the Department:
Prof. Ján Mikleš, PhD, DSc

Telephone: ++ 421 – 7 – 52 49 52 69
Fax: ++ 421 – 7 – 52 49 64 69
E-mail: mikles@cvt.stuba.sk

I. STAFF

Full Professor:
Ján Mikleš, PhD, DSc;

Associate Professors:
Monika Bakošová, PhD; Ján Danko, PhD; Ján Dvoran, PhD; Miroslav Fikar, PhD; Alojz Mészáros, PhD;

Assistant Professors:
Ľuboš Āirká; Mária Karšaiová, PhD; Magdaléna Ondrovièová; Andrej Seè; Anna Vasièkaninová; Anna Zemanovièová, PhD;

PhD students:
Anton Andrásik; Jozef Dzivák; František Jelenèiak; Štefan Kožka; Michal Kvasnica;

Technical staff:
Eva Fuseková; Andrea Kalmárová; Diana Láznièková; Anna Širicová;

II. TEACHING AND RESEARCH LABORATORIES

A. Teaching Laboratories:

Laboratory of Measuring Instruments and Techniques

Laboratory of Process Control

Laboratory of Gas Analysis

Computer Laboratory (PC 486, Pentium)

Computer Laboratory (LINUX)

B. Research Laboratories:

Laboratory of Chemical Reactor Analysis and Control

Laboratory of Biochemical Process Analysis and Control

Laboratory of Distillation Column Analysis and Control

Laboratory of Modelling and Simulation

Laboratory of Computer Aided Design

III. TEACHING

A. Undergraduate Study

2nd semester (spring)

Informatics	(1-2 h)	Ondrovièová, Vasièkaninová
-------------	---------	----------------------------

5th semester (autumn)

Computer Based Data Processing	(0-2 h)	Āirká, Dzivák, Fikar, Jelenèiak, Karšaiová, Kožka, Ondrovièová, Seè, Vasièkaninová
--------------------------------	---------	--

6th semester (spring)

Automatic Control Fundamentals	(2-0 h)	Danko, Mészáros
--------------------------------	---------	-----------------

Laboratory Exercises of Automatic Control Fundamentals	(0-2 h)	Andrášik, Bakošová, Āirká, Danko, Dzivák, Jelenèiak, Karšaiová, Ondrovièová, Seè, Vasièkaninová, Zemanovièová
--	---------	---

Bachelor projects	(0-4 h)	Bakošová, Dvoran, Karšaiová, Mészáros, Mikleš, Ondrovièová, Seè, Vasièkaninová, Zemanovièová
-------------------	---------	--

7th semester (autumn)

Process Control	(1-2 h)	Mészáros
-----------------	---------	----------

Process Dynamics	(2-0 h)	Bakošová
------------------	---------	----------

Operating Systems	(1-1 h)	Seè
-------------------	---------	-----

Control Devices and Systems	(2-1 h)	Danko
-----------------------------	---------	-------

Computer Programs	(1-2 h)	Fikar
-------------------	---------	-------

Laboratory Projects	(0-8 h)	Fikar, Karšaiová, Mikleš, Seè, Vasièkaninová
---------------------	---------	--

8th semester (spring)

Optimisation	(2-1 h)	Dvoran
--------------	---------	--------

Control Theory I	(2-2 h)	Mikleš, Āirká, Kožka
------------------	---------	----------------------

Laboratory Exercises of Control Theory I	(0-2 h)	Āirká, Kožka
--	---------	--------------

Experimental Identification	(2-0 h)	Mikleš
-----------------------------	---------	--------

Laboratory Project II	(0-6 h)	Éirka, Dvoran, Mészáros, Mikleš
Modelling and Control of Polymerisation Processes	(2-2 h)	Dvoran
Process Dynamics	(2-0 h)	Bakošová
Laboratory Exercises of Process Dynamics	(0-1 h)	Bakošová
9th semester (autumn)		
Control Theory II	(2-0 h)	Mészáros
Laboratory Exercises of Control Theory II	(0-2 h)	Mészáros
Intelligent Control Systems	(2-0 h)	Dvoran
Semestral Project	(0-10 h)	Dvoran, Karšaiová, Mészáros, Mikleš, Ondrovíèová
CAD Systems	(2-0 h)	Karšaiová
Industrial Applications of Process Control	(2-0 h)	Mikleš
Control of Technological Processes	(1-2 h)	Bakošová
10th semester (spring)		
Diploma Theses		Bakošová, Dvoran, Karšaiová, Mészáros, Mikleš, Seè, Zemanovièová

B. PhD Study

Topics in Control Theory	(2 h)	Mikleš
Software and Hardware of Control Systems	(2 h)	Danko
Intelligent Control Systems	(2 h)	Dvoran
Modelling and Simulation of Processes	(2 h)	Mészáros

IV. CURRENT RESEARCH PROJECTS

A. Development of advanced control methods for chemical reactors, distillation columns and other plants in chemical and food technology (Ján Mikleš)

The main goals of the project can be formulated in the following items:

- To derive mathematical models of chemical and biochemical processes: an exothermic reactor for decomposition of H_2O_2 , a tray distillation column and a stuffed distillation column for separation of binary mixtures, a warm-air drying chamber, a biochemical reactor.
- To develop methods and algorithms for system identification: closed-loop identification, identification based on artificial neural network, identification of physical system parameters from measured data.
- To investigate modern optimisation methods and algorithms especially for distillation columns and biochemical reactors, which are usually nonlinear high-order systems.
- To investigate robust stabilisation and robust feedback control of multivariable systems.
- To develop adaptive control methods and to create a program package of adaptive control algorithms for control of systems of the chemical and food technology.
- To include principles of artificial intelligence (expert systems, fuzzy control, neuro-fuzzy control, artificial neural networks) into control structures for chemical processes.
- To investigate the predictive control method and to create control algorithms based on the Youla-Kuèera parameterisation for solving unconstrained or constrained control problems.
- To verify all theoretical results on laboratory models chemical processes.
- To transform theoretical and experimental results into industrial conditions and to demonstrate benefits and advantages of advanced process control in chemical and food industry.

The most important results of the project are following: open-loop and closed-loop formulation of the control law, which gives the control signal as a finite sequence of minimum length, design of CVP based optimal control of an industrial depropanizer column, solving of a two step pole placement control design problem, where the pole placement method is combined with Youla-Kuèera parameterisation, application of the adaptive λ -tracking method for control of nonlinear chemical processes, application of closed-loop identification method for identification of a laboratory chemical reactor, design of a PI LQ controller using static feed-back.

B. Adaptive and Intelligent Control of Biochemical and Chemical Processes (Alojz Mészáros)

The main goals of the project can be listed as follows:

- Analysis of methods and algorithms for recursive identification of simplified experimental and analytical models of biochemical processes for simulation and control purposes.
- Design, testing and comparison of intelligent and robust controllers.
- Development and verification of modern integrated optimising algorithms, suitable for the optimising layer of the hierarchical multilayer control structure.
- Development of software package based on artificial neural networks for modelling and control strategies.
- Implementation of principles of fuzzy control, neuro-fuzzy control and decentralised control to control structures for biochemical and chemical processes.
- Accomplishment of computer based control system for a laboratory fermenter LF-3.
- Data acquisition and processing utilising software filters on the fermenter LF-3, estimation of state variables in the on the basis of neural network approach.
- Implementation of the developed identification algorithms and control structures in control of the laboratory fermenter.
- Transfer and adaptation of the results and experience, gained through simulation and laboratory experiments to industrial circumstances, especially those ones involved in citric acid and Baker's yeast production as well as in alcoholic fermentation processes.

Original results obtained in the frame of the project are: training of artificial neural networks in the role of controllers using stochastic approximation method, adaptive neural PID controller, iterative dynamic programming method using

artificial neural networks for solving unconstrained and constrained dynamic optimisation problems, where an artificial neural network is used as a predictor, predictive control algorithms based on artificial neural networks, where both a recurrent artificial neural network and a feedforward artificial neural network are used; determination of optimal feed rate profile in fed-batch fermenters, data-based system of equipment for global using.

V. COOPERATION

A. Cooperation in Slovakia

Department of Automatic Control Systems, Faculty of Electrical Engineering and Informatics, Slovak University of Technology, Bratislava

Department of Automation and Control, Faculty of Electrical Engineering and Informatics, Slovak University of Technology, Bratislava

Department of Automation and Measurement, Faculty of Mechanical Engineering, Slovak University of Technology, Bratislava

Institute of Control Theory and Robotics, Slovak Academy of Sciences, Bratislava

Department of Technical Cybernetics and Artificial Intelligence, Technical University of Košice, Košice

Department of Management and Control Engineering, BERG Faculty, Technical University of Košice, Košice
Slovnsoft, Inc., Bratislava

NCHZ, Inc., Nováky

ProCS, Ltd., Šaľa

B. International Cooperation

Department of Process Control and Computer Techniques, University of Pardubice, Pardubice, Czech Republic

- Control system design

Department of Computing and Control Engineering, Prague Institute of Chemical Technology, Prague, Czech Republic

- Control system design

Department of Automatic Control, Faculty of Technology Zlín, Technical University Brno, Zlín, Czech Republic

- Adaptive control

- Robust control

Institute of Information Theory and Automation of the Academy of Sciences of the Czech Republic, Prague, Czech Republic

- Polynomial synthesis

- Predictive control

Trnka Laboratory for Automatic Control, Faculty of Electrical Engineering, Czech Technical University, Prague, Czech Republic

- Adaptive control

- Predictive control

LSGC-CNRS, Ecole Nationale Supérieure des Industries Chimiques (ENSIC), Nancy, France

- Dynamic optimisation of distillation columns

- Control of distillation columns

Ecole Nationale Supérieure des Ingénieurs de Génie Chimique-Chemin de la Loge (ENSIGC), Toulouse, France

- Neural networks

- Predictive control

Ruhr University, Bochum, Germany

- Closed-loop identification

- Predictive control

University of Dortmund, Dortmund, Germany

- Predictive control

Technical University of Budapest, Budapest, Hungary

- Modelling of chemical processes

University of Veszprém, Hungary

- Environmental engineering

- Bioengineering projects

C. Membership in Domestic Organisations and Societies

Slovak Society of Cybernetics and Informatics,

Bratislava

(A. Mészáros, J. Mikleš)

Slovak Society of Chemical Engineering, Bratislava (M. Bakošová, J. Danko, J. Dvoran, M. Fikar, M. Karšaiová, A. Mészáros, J. Mikleš, M. Ondrovičová, A. Zemanovičová)

Slovak Union of Industrial Chemistry,

Science-Technical Society, Bratislava

(M. Bakošová, Ľ. Čirka, J. Danko, J. Dvoran, M. Fikar, M. Karšaiová, D. Lázničková, A. Mészáros, J. Mikleš, M. Ondrovičová, A. Seč, A. Vasičkaninová, A. Zemanovičová, J. Dzivák, F. Jelenčík, Š. Kožka)

D. Membership in International Organisations and Societies

International Federation of Automatic Control, Laxenburg, Austria

(J. Mikleš)

European Federation of Biotechnology, Brussels, Belgium

(A. Mészáros)

The New York Academy of Sciences, New York, USA

(A. Mészáros)

E. International Scientific Programmes

1. INCO COPERNICUS

a) No. CP97:7010, The European Network for Industrial Application of Polynomial Design Methods – EUROPOLY
Coordinator at the FCT STU: J. Mikleš

Participants: Institute of Information Theory and Automation of the Academy of Sciences of the Czech Republic, Prague, Czech Republic; University of Twente, Twente, Netherlands; University of Glasgow, Glasgow, Great Britain; Uppsala University, Uppsala, Sweden; University of Strathclyde, Strathclyde, Great Britain; Politecnico di Milano, Milan, Italy; CNRS – LAAS, Toulouse, France; Czech University of Technology, Prague, Czech Republic; Technical University of Brno, Brno, Czech Republic; Department of Process Control, Faculty of Chemical Technology, Slovak University of Technology, Bratislava, Slovakia; Warsaw University of Technology, Warsaw, Poland; Swiss Federal Institute of Technology, Zurich, Switzerland; ProCS, Ltd., Šaštín-Stráže, Slovakia; Compureg Plzeň, Plzeň, Czech Republic;
Period: January 1998 – December 2000

2. Project of Austrian - Slovak Scientific Cooperation: Aktion Österreich - Slowakei

a) No. 26s12, Optimierung des Verbrennungsprozess von dem Standpunkt des Umweltschutzes (Optimisation of a Combustion Process from the Environmental Point of View)

Coordinator at the FCT STU: A. Zemanovičová

Participants: Faculty of Chemical Technology, Slovak University of technology, Bratislava, Slovakia; Technical University of Vienna, Vienna, Austria

Period: April 1999 – December 2000

3. Project of Slovak – Czech Scientific Cooperation

a) No. 112/344 Rozvoj metód moderného riadenia procesov chemickej a potravinárskej technológie (Development of Advanced Control Methods for Processes of Chemical and Food Technology)

Coordinator at the FCT STU: J. Mikleš

Participants: Department of Process Control, Faculty of Chemical Technology, Slovak University of Technology, Bratislava, Slovakia; Department of Process Control and Computer Techniques, University of Pardubice, Pardubice, Czech Republic

Period: January 2000 – December 2001

F. Visitors from Abroad

Prof. G. Bachmann	Technical University of Vienna, Vienna, Austria, September 2000 (1 day)
Prof. P. Dostál	Faculty of Technology Zlín, Technical University of Brno, Zlín, Czech Republic, April 2000 (1 day)
F. Dušek, PhD	University of Pardubice, Pardubice, Czech Republic, September 2000 (2 days)
Prof. H. Hofbauer	Technical University of Vienna, Vienna, Austria, September 2000 (1 day)
D. Honc	University of Pardubice, Pardubice, Czech Republic, September 2000 (2 days)
S. Krejčí, PhD	University of Pardubice, Pardubice, Czech Republic, November 2000 (2 days)
J. Macháček, PhD	University of Pardubice, Pardubice, Czech Republic, September 2000 (2 days)
Prof. E. Padouvas	Technical University of Vienna, Vienna, Austria, September 2000 (1 day)
R. Prokop, PhD	Faculty of Technology Zlín, Technical University of Brno, Zlín, Czech Republic, June 2000 (1 day)
Prof. I. Taufer	University of Pardubice, Pardubice, Czech Republic, September 2000 (4 days)
Prof. I. Taufer	University of Pardubice, Pardubice, Czech Republic, October 2000 (2 days)
Prof. I. Taufer	University of Pardubice, Pardubice, Czech Republic, November 2000 (5 days)

G. Visits of Staff Members and PhD Students to Foreign Institutions

A. Andrášik	Institute of Microbiology of the Academy of Sciences of the Czech Republic, Prague, Czech Republic, September 2000 (5 days)
A. Andrášik	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
M. Bakošová	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
M. Bakošová	International Congress of Chemical and Process Engineering CHISA 2000, Prague, Czech Republic, August 27. – 31. 2000
M Bakošová	University of Pardubice, Pardubice, Czech Republic, November 2000 (2 days)
Ľ. Čížka	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
J. Dvoran	University of Pardubice, Pardubice, Czech Republic, February 2000 (2 days)
J. Dvoran	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
J. Dvoran	Hanover, Germany, September 2000 (7 days)
J. Dvoran	Srní, Czech Republic, September 2000 (3 days)
J. Dzivák	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
M. Fikar	Ruhr University, Bochum, Germany, January - September 2000 (9

M. Fikar	months) Europoly Steering Committee Meeting, Milano, Italy, November 2000 (4 days)
F. Jelenèiak	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
F. Jelenèiak	Technical University of Vienna, Vienna, Austria, September 2000 (6 days)
M. Karšaiová	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
M. Karšaiová	International Congress of Chemical and Process Engineering CHISA 2000, Prague, Czech Republic, August 27. – 31. 2000
Š. Kožka	Symposium on Mathematical Modelling, Vienna, Austria, Feb 2. – 4. 2000
Š. Kožka	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
Š. Kožka	IFAC Symposium on Robust Control Design, Prague, Czech Republic, June 21. – 23. 2000.
A. Mészáros	Technical University of Budapest, Budapest, Hungary, April, 2000 (2 days)
A. Mészáros	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
A. Mészáros	University of Veszprem, Veszprem, Hungary, September 2000 (2 days)
A. Mészáros	European Federation of Biotechnology, Copenhagen, Denmark, September 2000 (5 days)
A. Mészáros	Technical University of Budapest, Budapest, Hungary, October, 2000 (1 day)
A. Mészáros	Faculty of Technology Zlín, Technical University of Brno, Zlín, Czech Republic, November 2000 (1 day)
J. Mikleš	IFAC Workshop on Digital Control, Terrassa, Spain, April 5. – 7. 2000
J. Mikleš	Scientific - Technical Conference Process Control 2000, Kouty nad Desnou, Czech Republic, June 11. – 14. 2000
J. Mikleš	Institute of Information Theory and Automation of the Academy of Sciences of the Czech Republic, Prague, Czech Republic, June 2000 (3 days)
J. Mikleš	Greece NMO of IFAC, Athens, Greece, July 2000 (4 days)

IV. CURRENT RESEARCH PROJECTS**A. Optimizing of physicochemical and biological effects with respect to increase of nutritive and sensory value of foodstuffs (Alexander Dandár)**

Physicochemical properties of amaranth starches were studied. On the basis of our results the starches mentioned above will be used in pharmaceutic industry too. Technological proposal for production of new cereal products (cereal mixtures) with higher nutritive value was submitted.

The data for production of food supplements with glucan of the highest quality were worked out. Clinical tests with oncological patients were made. Natural food additives (cereal and pseudocereal starches and legume starch) were added into selected food products to increase their nutritive value, sensory properties and durability.

Suitable methods for determination of antioxidative effects of natural substances were tested. The kinetics of colorant formation in the process of liming of raw juice was evaluated. Effect of temperature, amount of lime milk, amino acids and reducing sugars concentration on colorants formation was analysed.

Natural additives (ascorbic acid, alfa-tocopherol acetate, bacteriocins, starters combined with mould) into fermented meat products to increase their durability and sensory properties were tested.

B. Bioconservation of plant and animal raw materials using probiotic bacteria of human health promoters to eliminate the food contaminants and to increase the nutritive value of food products (Jolana Karovièová)

Isolation and identification of lactic acid bacteria and their selection on the basis of lactic and acetic acids production were studied. The changes of nitrates and nitrites concentration and the production of free amino acids and biogenic amines in selected plant substrates were analysed. Probiotic properties of selected strains of Lactobacillus for example survival at low pH value and the production of bacteriocins and their growth in selected substrates were studied. Sensory evaluation of lactic fermented vegetables as well as vegetable juices was made. This evaluation was realized by group of specialists using the profile method. The results of sensory and analytical methods were evaluated by PCA method. Lactic bacteria of Enterobacter aerogenes were analysed under different conditions (different concentration of glucose, potassium sorbate, sodium benzoate, NaCl) Their growth and production of metabolite on synthetic substrates (MPB, GTK) and on natural one (cabbage juice) at different temperature were observed.

Validative parameters of organic acids by capillary ITP were defined.

V. COOPERATION**A. Cooperation in Slovakia**

Ministry of Agriculture of Slovak Republic, Bratislava
 Institute of Food Research, Bratislava
 Slovak Academy of Sciences, Bratislava
 Považský cukrovar Co, Trenèianska Teplá
 Slovak Sugar Technology Association, Bratislava
 OLD HEROLD Co, Trenèín
 SLOVAMYL Ltd, Bratislava
 Mäsozávod, Bratislava
 University of Agriculture, Nitra
 ADIPO Ltd, Nitra

B. International Cooperation

Institute of Food Research, Prague, Czech Republic
 College of Agriculture, Brno, Czech Republic
 Škrobárný Co, Brno, Czech Republic
 Institute of Chemical Technology, Prague, Czech Republic
 Institute of Food Research, Manchester, UK
 Akademia Ekonomiczna, Wroclaw, Poland
 Technical University, Berlin, Germany
 Technical University, Lodž, Poland

C. Membership in Domestic Organizations and Societies

Slovak Society of Agricultural, Food and Forestry Sciences, Bratislava (A. Dandár, M. Takácsiová, L. Staruch)
 Sciences, Bratislava (A. Dandár, M. Takácsiová, L. Staruch)
 ICC National Association Council in Slovakia (L. Dodok)
 Slovak Academy of Agricultural Sciences, Bratislava (A. Dandár, L. Dodok)
 Slovak Academy of Technical Sciences, Bratislava (A. Dandár)
 Foundation "SLOVAK GOLD", Bratislava (L. Staruch)

Slovak Institute of Technical Normalization,
Bratislava
The Union of Slovak Butchers, Bratislava
Slovak National Committee of International
Commission for Uniform Methods of Sugar
Analysis - ICUMSA
Slovak Agricultural Academy, Nitra

(L.Dodok, L.Staruch)

CENTRAL LABORATORIES

Head of the Department:

Assoc. Prof. Ján Leško, PhD

Telephone: +421-7-593 254 17

+421-7-529 260 18

Fax: +421-7-529 260 18

E-mail: lesko@chelin.chtf.stuba.sk

I. STAFF

Associate Professors:

Ján Leško, PhD; Ján Lokaj, PhD;

Research Fellows:

Štefan Holotík, PhD; Tibor Jakubík, PhD; Tibor Liptaj, PhD;

PhD Student:

Juraj Bella; Svatava Kašparová; Pham Tran Nghia;

Technical Staff:

Marta Dunajová; Svatava Kašparová; Peter Kottaš; Mária Mravcová; Eva Pappová; Nařína Prónayová; Walter Weis

II. TEACHING AND RESEARCH LABORATORIES

B. Research Laboratory

Laboratory of NMR Spectroscopy (NMR)

Laboratory of Mass Spectrometry (MS)

Laboratory of X-Ray Microanalysis

IV. CURRENT RESEARCH PROJECTS

A. Development of NMR techniques for the structure determination of modular molecules (Tibor Liptaj)

The main goals of the project are:

a/ development of the NMR techniques which provide long-range structural information on the studied molecules.

These methods rely on measurement and interpretation of residual dipolar coupling constants which appear in high resolution spectra because of partial orientation of molecules.

The main results are:

a/ development of the methods for the precise determination of the value of coupling constants

b/ determination of the dipolar $^{1}\text{J}(\text{C}-\text{H})$ coupling constants in the model oligosaccharide.

Direct participation on other projects:

NMR laboratory cooperates mainly with:

Department of organic chemistry

Department of organic technology

Department of petroleum technology and petrochemistry

Department of physical chemistry

Department of anorganic chemistry

Department of analytical chemistry

Department of biochemical technology

Department of biochemistry and microbiology

MS Laboratory cooperates mainly with:

Department of organic chemistry

Department of organic technology

Department of petroleum technology and petrochemistry

Department of analytical chemistry

Department of biochemistry and microbiology

Laboratory of Microanalysis cooperates with:

Department of organic chemistry

Department of ceramics, glass and cement

V. COOPERATION

A. Cooperation in Slovakia

Faculty of Medicine, Jesenius University, Martin

Institute of preventive and clinical medicine, Bratislava

Derer Hospital, Bratislava

Drug Research Institute, Modra

Slovak Academy of Sciences, Institute of Inorganic Chemistry, Bratislava

Slovak Academy of Sciences, Chemical Institute, Bratislava

Viticultural and Enological Research Institute, Šenkvice

Comenius University, Faculty of Natural Sciences, Bratislava
 Comenius University, Faculty of Pharmacy, Bratislava
 Soil Fertility Research Institute, Bratislava
 Research Institute of Animal Production, Nitra
 Institute of Petrochemistry, Prievidza
 Chemical Factory, Nováky
 Biotika, Slovenská Ľupča
 Slovnaft, Bratislava
 Duslo, Šaľa
 Slovakofarma, Hlohovec
 Glass Factory, Nemšová
 Ceramics Factory, Čáslav
 Technical Glass Factory, Bratislava

B. International Cooperation:

The University of Edinburgh, Chemistry Department, The King's Buildings, Edinburgh, England
 - Development of NMR techniques for structure determination of multi-modular proteins
 Université Blaise Pascal, Department of Organic and Bioorganic Chemistry, Clermont-Ferrand, France
 - The NMR study of the cellular metabolism of the Fibrobacter succinogenes using C-13 labelled substrate
 Università di Bari, Facoltà di Medicina Veterinaria, Istituto di Clinica Chirurgica, Italy
 - Study of the ischemia and reperfusion on the metabolic map of rabbit CNS.
 Department of Fine Organic Chemistry, ECPM/ University L. Pasteur, Strasbourg, France
 - NMR characterization of chiral compounds
 Bruckner Maschinenbau GmbH., Siegsdorf, Germany
 - ¹³C NMR analysis of the polypropylenes.

C. Membership in Domestic Organizations and Society:

Slovak Spectroscopic Society, Bratislava (T.Liptaj)

D. Membership in International Organizations and Societies:

22nd Discussion Meeting: Progress in the Magnetic Resonance of Bioactive Compounds and New Material. Regensburg, September 27.-30., 2000, Germany (T.Liptaj)

G. Visitors from Abroad:

Prof. Dušan Uhrín	The University of Edinburgh, England, September-October 2000 (14 days)
H. Visits of Staff Members and PhD Students to Foreign Institutions:	
Pham Tran-Nghia	The University of Edinburgh, England, February-March 2000, (27 days)
T. Liptaj	Meeting 15th NMR Valtice, Czech republic, April 2000, (3 days)
N. Prónayová	Meeting 15th NMR Valtice, Czech republic, April 2000, (3 days)
T. Liptaj	ECPM/ University L. Pasteur, Strasbourg, France, May 2000, (30 days)
S. Kašparová	XVIIth Biochemical Congress, Praha, Czech republic, September 2000, (4 days)
T. Liptaj	52th Congress Chemical Society, České Budějovice, Czech republic, September 2000, (5 days)
T. Liptaj	The University of Edinburgh, England, Nov.-Dec. 2000, (14 days)
